Title: Proposal to encode Limbu in the UCS

Source: Boyd Michailovsky Status: Expert contribution

Date: 2001-03-29

ISO/IEC JTC 1/SC 2/WG 2 PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC 10646

Please fill Sections A, B and C below. Section D will be filled by SC 2/WG 2.

For instructions and guidance for filling in the form please see the document "Principles and Procedures for Allocation of New Characters and Scripts" (http://www.dkuug.dk/JTC1/SC2/WG2/prot)

A. Administrative

- 1. Title: Limbu
- 2. Requester's name: Boyd Michailovsky, LACITO/CNRS, 7 rue Guy Môquet, 94800 Villejuif, France.
- 3. Requester type (Member body/Liaison/Individual contribution): Individual contribution
- 4. Submission date: 29 March 2001
- 5. Requester's reference (if applicable):
- 6. (Choose one of the following:)
 This is a complete proposal: YES; or,
 More information will be provided later:

B. Technical - General

- 1. (Choose one of the following:)
- a. This proposal is for a new script (set of characters): Yes

Proposed name of script: Limbu

b. The proposal is for addition of character(s) to an existing block:

Name of the existing block:

- 2. Number of characters in proposal: 60 plus 7 codepoints reserved for obsolete characters
- 3. Proposed category (see section II, Character Categories): A
- 4. Proposed Level of Implementation (see clause 15, ISO/IEC 10646-1):

Is a rationale provided for the choice?

If Yes, reference:

5. Is a repertoire including character names provided?: YES

- a. If YES, are the names in accordance with the 'character naming guidelines' in Annex K of ISO/IEC 10646-1?
- b. Are the character shapes attached in a reviewable form? YES
- 6. Who will provide the appropriate computerized font (ordered preference: True Type, PostScript or 96x96 bit-mapped format) for publishing the standard?

The Kirat Yakthung Chumlung is being contacted on this.

If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:

- 7. References:
- a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? YES
- b. Are published examples (such as samples from newspapers, magazines, or other sources) of use of proposed characters attached? YES
- 8. Special encoding issues:

Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information):

YES (see proposal)

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? NO

If YES explain

2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? Not specifically with reference to normalization.

If YES, with whom?

If YES, available relevant documents?

- 3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? YES Reference: See proposal.
- 4. The context of use for the proposed characters (type of use; common or rare) Common. Reference: see proposal.
- 5. Are the proposed characters in current use by the user community? YES If YES, where? Reference: Nepal, Sikkim (India). (See information in proposal)
- 6. After giving due considerations to the principles in N 1352 must the proposed characters be entirely in the BMP? YES

If YES, is a rationale provided? YES

If YES, reference: see proposal

- 7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)? YES
- 8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? NO

If YES, is a rationale for its inclusion provided?

If YES, reference:

9. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character? NO

If YES, is a rationale for its inclusion provided?

If YES, reference:

10. Does the proposal include use of combining characters and/or use of composite sequences (see clause 4.11 and 4.13 in ISO/IEC 10646-1)? YES (no composite sequences).

If YES, is a rationale for such use provided? YES

If YES, reference: see proposal

Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided? If YES, reference:

11. Does the proposal contain characters with any special properties such as control function or similar semantics? NO

If YES, describe in detail (include attachment if necessary)

D. SC 2/WG 2 Administrative (To be completed by SC 2/WG 2)

1. Relevant SC 2/WG 2 document numbers:
2. Status (list of meeting number and corresponding action or disposition):
3. Additional contact to user communities, liaison organizations etc:
4. Assigned category and assigned priority/time frame:

DRAFT PROPOSAL: UNICODE CODING OF THE LIMBU SCRIPT

Introduction

Limbu is a Tibeto-Burman language of the East Himalayish group, spoken by about 200,000 persons mainly in eastern Nepal, but also in the neighboring Indian states of Sikkim and West Bengal (Darjeeling district). Its close relatives are the languages of the East Himalayish (Shafer 1966-1973) or "Kiranti" group in Eastern Nepal. It is only very distantly related to the Lepcha (Rong) language of Sikkim, whose script is currently proposed for the BMP, and to Tibetan.

Names: the name "Limbu", used in Nepal and in Nepali (the Indo-Aryan national language of Nepal and *lingua franca* of Darjeeling district and Sikkim), is of uncertain origin. In Limbu, the Limbu call themselves *yakthuŋ*. Individual Limbus often take the surname "Subba", a Nepali term (of Arabic origin) for "headman". *Kirāta* is a Sanskrit term refering to (?some variety of non-Aryan) hill-dwellers. It is currently used in Nepali (1) as a general term (*kirātī*) for Limbus and "Rais" (numerous Tibeto-Burman speaking groups in eastern Nepal) and (2) as a term for the dynasty which is presumed to have preceded that of the Licchavi (?4C.) in the Kathmandu valley.

Since the late 1970's, Limbu, in the Limbu script, has been offered in the Englishmedium state schools of Sikkim as a vernacular language subject in areas populated by Limbus. Over 4000 pupils study Limbu for one hour daily, taught by more than 300 teachers. Course books are available for classes 1-12. In Nepal, Limbu script is taught more sporadically on private initiative. A Limbu newspaper, *Tamchoppa* ["Morning Star"], has been published somewhat irregularly from Kathmandu since 1995. There is some literary production in both Nepal and Sikkim.

The Limbu script is often called "Sirijonga" ("Srijunga"/"Srijanga") after the Limbu culture-hero Sirijonga, who is credited with its invention. The oldest known Limbu writings were collected in Darjeeling district in the 1850's. The script in which these were written is the ancestor of the modern script. It differs primarily in not representing voiced occlusive consonants (/b, bh, d, dh, g, gh, j/). There is, in fact, no phonological opposition between voiced and voiceless occlusives in Limbu phonology. The inherent vowel in the old script is *a* and not *open o* as in the modern script.

The modern version of the script was developed beginning in 1925 in Kalimpong, Darjeeling district. It is a revival of the older script, with the addition of voiced consonants and some changes in the shapes and functions of the letters. Voiced consonants may have been added to accomodate loan words, or with a view to using the script for neighboring languages, or simply to make it more like Devanagari. The signs for length and glottal stop have been added in recent years.

Virtually all Limbu speakers are bilingual in Nepali, and far more Limbus are literate in Nepali than in Limbu. For this reason, many Limbu publications contain material both in Nepali and in Limbu, and in some cases the Limbu appears both in the Limbu script and in Devanagari. In some publications, literary neologisims are glossed in Nepali or in English.

A preliminary draft proposal for Unicode encoding of the Limbu script appeared in Uncode Technical Report #3 (1992, review period ending 15 August 1993), based on a draft by Lloyd Anderson, along with a "Kirat (Limbu) Names List, draft 92/10/20". These efforts do not appear to have been pursued. The authors lacked information on the current use of the script.

Description of the script

The Limbu script is of the Indian type.

Syllable initial consonants

The CONSONANT LETTERS (and clusters) represent syllable initial consonants (and clusters) followed by the inherent vowel, short *open* o(/5).

SUBJOINED CONSONANT LETTERS are joined to the bottom of the consonant letters, extending to the right, to indicate "medials" in syllable-initial consonant clusters. There are very few of these clusters in native Limbu words. The script provides for subjoined v, r, and w.

SMALL LETTERS are used to indicate syllable-final consonants. (See below on vowel length for further details.) The following SMALL LETTER consonants are found: k, ng, t, n, p, m, n, r, l, corresponding to the syllable finals of native Limbu words. These letters are independent forms which, unlike the conjoined or half-letter forms of Indian scripts, may appear alone as word-final consonants (where Indian scripts use full consonant letters and the sign $vir\bar{a}ma$). The syllable finals are of course pronounced without a following vowel. (Final occlusives in Limbu are phonetically unexploded and pronounced with a simultaneous glottal closure.)

The assignment of separate codepoints to SUBJOINED and SMALL consonant letters is discussed below.

Vowels

To indicate a syllable with a vowel other than the inherent vowel, a VOWEL SIGN is added over, under, or to the right of the initial consonant letter or cluster.

Although the vowel *open o* is the inherent vowel, the Limbu script has a combining vowel sign which may optionally be used to represent it. Many writers (e.g. Subba 1991) avoid using this sign, considering it to be redundant.

Syllable-initial vowels are represented by the VOWEL-CARRIER LETTER with the appropriate vowel sign. Used by itself, the vowel-carrier letter represents the "inherent vowel" *open o* (/ɔ/) in syllable-initial position.

The initial consonant letters have here been named "KA", "KHA", etc., although they are in fact pronounced with *open o*, and do not represent the Limbu syllables /ka/, /kha/, etc. This is in keeping with the usage of learned Limbus in writing the letter-names in Devanagari. It would have been confusing to call the vowel-carrier letter "A", however, so it is here called simply the VOWEL-CARRIER LETTER, avoiding a pronounceable name. (See Note on Limbu vowels below.)

Vowel length

Long vowels in open syllables are indicated by writing the LIMBU SIGN KEMPHRENG, which looks like the dieresis or umlaut sign, over the initial consonant or cluster.

In closed syllables, there are two different ways of indicating vowel length: (1) Vowel length is not indicated by *kemphreng*; instead, the final consonant is written as a full form, marked by the LIMBU SIGN SA-I. This sign thus marks vowel length in addition to

functioning as *virāma* in suppressing the inherent vowel. (2) Vowel length is indicated by *kemphreng*, as for open syllables, and the syllable-final consonant appears in "small" form without SA-I. Writers who follow this practice use SA-I only for final consonants which do not have small forms, regardless of vowel length. These occur essentially in loan words, and in some fast speech phenomena where a vowel is syncopated and the preceding initial consonant becomes the final of the preceding syllable. The second method has been advocated recently by certain writers in Nepal.

The sign SA-I is sometimes referred to in Limbu sources (even in sources in which it is used only in long syllables) as a "shortness" marker, as the consonant pronounced without the inherent vowel is regarded as shortened.

Glottalization

The LIMBU SIGN MUKPHRENG represents glottalization. For the purposes of the present proposal it may be considered as representing a final glottal consonant. (This is not quite satisfactory as a phonological analysis.) Mukphreng never appears as a syllable-initial. Although some analysts consider that word-final nasal consonants may be glottalized, this is not currently indicated in the script; *mukphreng* is not currently written after final consonants. (No other syllable-final consonant clusters occur in Limbu.)

Codepoint issues

The main issue here is the assignment of separate codepoints for medials (SUBJOINED LETTERS) and finals (SMALL LETTERS).

The question is whether a *halant* or *virama* should be used, as has been done in the UNICODE Devanagari coding, to mark the absence of the inherent vowel on consonants which appear as syllable finals or as the initial element of clusters. In my view this would lead to confusion in Limbu. The reason is that the Limbu sign SA-I is itself clearly based on the Indian halant or virama, but for a majority of current writers it has a different semantics, since it indicates vowel length on closed syllables. Although some authorities (Bairagi Kaila, in press) advocate the elimination of this function of SA-I (see above), it seems desirable to respect the two orthographic traditions. Introducing a second version of *virama* (in addition to SA-I) would further complicate matters.

There is phonological justification for considering initial and final consonants as separate inventories.

As for the initial consonant clusters, there is no native tradition of *viram* notation for these. Similar subjoined letters are assigned codepoints in Unicode Tibetan script.

Eliminating the subjoined and small letters would be contrary to the native concept of the script and would in any case only save a small number of codepoints as compared to the situation in Devanagari, where combining forms are very numerous. The resulting system would be less transparent, and more difficult to render. For these reasons, the assignment of separate codepoints is proposed.

A few codepoints have been reserved for letters that are currently obsolete but would be necessary for publishing older texts.

Codepoints have been reserved for the following signs found in 19th Century manuscript sources. The semantics of the last three is not entirely clear to the present proposal writer, so no name is proposed.

LETTER NYA (\tilde{n})

SIGN LO for the exclamatory (among other uses) particle *lo*.

SIGN DOT ABOVE (probably equivalent to anusvara).

a small-letter final nasal of uncertain use. The old alphabet has two finals in the form of small circles, one like the current final ng both in form and in position, the other placed below the initial. It appears that the former represents nasalization of some kind and the latter final ng.

an extra vowel symbol (?resembling Devanagari short i).

Codepoints are reserved for two additional letters found in early versions of the modern script, from The Limbu Primary Book (1929) to I. S. Chemjong's dictionary (1960):

LETTER JHA

LETTER SSA (s).

Limbu equivalents for Devanagari conjoined characters (tr, ks, and $j\tilde{n}$) found in early modern sources are not assigned codepoints.

Collating order

There is no universally agreed alphabetical order for Limbu script. Modern sources essentially follow Devanagari in most respects. The order of the alphabet in the old script is radically different.

In Nepal, it is common to sort Limbu in the usual Devanagari alphabetical order, with the GLOTTALIZATION sign often considered as the last of the consonants (after HA), and long vowels sorted after their short partners. The added Limbu vowels OPEN O (when it is written with a vowel sign) and OPEN E, appear, in that order, after the other vowels in the sort order. (Note that although e precedes o in Indian alphabets, Limbu *open o* precedes *open e* in most sources.)

In Sikkim, a somewhat different order is used: the letter NA is placed before TA, and the letter GHA is placed at the end of the alphabet.

Glyph placement

The vowel signs a, open e, and i appear over the initial, u appears under the initial, e and ai appear to the right of the initial, and both o and au appear both over and to the right of the initial. (The vowel sign o is simply a + e; au is a + o.) The LIMBU SIGN KEMPHRENG (vowel length) is written over the initial consonant or vowel-carrier, often slightly to the right, in any case after any superscribed vowel sign. It is placed over the horizontal portion of the vowel signs a and i.

The SMALL LETTER syllable-finals k, n, p, m and l occupy the upper half of the height of full initial consonants (the typographer's "x-height"). The final ng, the subjoined medials -y- and -w-, and the glottalization sign mukphreng occupy the lower half of this space. The finals t and t and the sign SA-I occupy the same vertical space as the vowel t, under the space occupied by full initial consonants. The subjoined medial -t- appears at this same level, after the initial consonant.

Punctuation

The main punctuation mark used is the double vertical line, here called DOUBLE DANDA ("stick") as in Devanagari Unicode. (The name "viram" ["pause"] is avoided here to

avoid confusion with the virama sign described above.) The Limbu question mark (especially) and exclamation point have shapes peculiar to Limbu, especially in Sikkimese typography. The former is assigned a codepoint to facilitate the use of both Limbu and Devanagari scripts in the same documents.

Subba 1991 proposes 9 punctuation marks for Limbu. It is not clear to what extent these have been adopted; most can be supplied from Devanagari or other fonts.

Digits

Digits have distinctive forms and are assigned codepoints because Limbu and Devanagari (or Limbu and "Arabic") numbers are often used in the same document.

Implementations

There are a number TrueType implementations of the Limbu script in circulation in Nepal. The one used here is "Sirijonga". The copyright status of these fonts is unclear.

Srijunga. (c) 1994 Karun Thapa. Sat Oct 01 15:12:03 1994. (Srijunga.ttf. saved 05 Sept. 1996 09:47)

Sirijonga. K. Yarang, J.R. Pandhak, Y. Lawoti, Y. P. Yakwa. (Fontmonger) (Sirijng.ttf. saved 11 Feb. 1999 08:55).

Authorities

Two widely respected native authorities on Limbu script, representing current Nepalese and Sikkimese usage, respectively:

(1) Mr. Til Bikram Nembang, former member of the Royal Nepal Academy and editor of the completed but still unpublished Royal Nepal Academy Dictionary of Limbu. Mr. Nembang writes under the pseudonym of "Bairagi Kaila". He has published a number of books of Limbu "mundhum" (traditional rituals) in Limbu, in both Limbu and Devanagari scripts, with Nepali translations.

mail address: GPO Box No. 3290, Kathmandu, Nepal.

email: nembang@wlink.com.np

(2) Mr. B. B. Subba (Muringla Nugo), Joint Director, Department of Education, Government of Sikkim. Mr. Subba has published a dictionary of Limbu, which he now considers obsolete, and numerous textbooks used in Sikkim. His design of a Limbu font won the President's award in India in 1981.

address: Joint Director, Education Department, Government of Sikkim, Gangtok, Sikkim, India.

The Limbu cultural association, Kirat Yakthung Chumlung, publishes *Tanchoppa*.

website: http://www.msnepal.org/partners/kyc/index.htm.

address: P.O. Box 4548, Mahalaxmisthan, Lalitpur, Kathmandu, NEPAL.

email: chumlung@wlink.com.np

tel: 977(1)520349

Email: chumlung@wlink.com.np

Notes on Limbu vowels

Limbu has a seven-vowel system, /i, e, ε , a, ϑ , o, u/, with phonological length on all vowels except /e/ and /o/, which are generally phonetically long and often so written in Limbu orthography. The absence of a schwa timbre may explain the adoption of *open o* as the inherent vowel. The original Unicode proposal for Limbu proposed the name EE for *open e* and OO for *open o*. These names have the advantage of offering a translitteration, as long as they are not misinterpreted as indicating length.

In Devanagari transcription of Limbu, the Limbu inherent vowel is transcribed as the Devanagari inherent vowel. In fact, the vowel represented by the inherent vowel in Limbu is rather different in function from that of Indo-Aryan languages, although it may be close in pronunciation. The Devanagari inherent vowel represents a, the short partner of \bar{a} , but with a less open, schwa-like pronunciation in many languages. (In Bengali it may even be pronounced "o".) The Limbu inherent vowel represents $open\ o\ (/o/)$, which has both long and short varieties in full opposition with long and short /a/. In Devanagari transcription, Limbus use the DEVANAGARI SIGN VISARGA to indicate length, placing it after the unvowelled consonant to indicate the Limbu vowel /oz/, after the DEVANAGARI VOWEL SIGN AA $(\bar{a}k\bar{a}r\bar{a})$ to indicate Limbu /az/, etc. Thus the opposition between the Limbu vowels /a/ and /o/ is (or can be) preserved. Other problems in the Devanagari transcription of Limbu need not be discussed here.

NAMES LIST

The list below is a complete inventory, including some letters only used in older versions of the script. There is space for additions.

Column 1 is the codepoint; 2: the glyph (combining marks are represented with a majuscule O); 3: the pronunciation of the glyph as written; 4: the native name of the glyph, if different from 3; 4 the proposed Unicode name.

INITIALS (VOWEL-CARRIER AND CONSONANTS)

Character code table for Limbu script.

Codepoints 09, 0A, 1A, 21, 32, 3D, 3F are reserved for currently obsolete signs. The font illustrated is "SIRIJONGA".

APPENDIX: Spelling out loud in Limbu

The names of the glyphs are pronounced in series, followed by the pronunciation of the whole syllable.

1. Vowel signs (shown with initial k).

```
Ζ
       ka
                 "ko" (?the inherent vowel is sometimes called "om")
Ž
       ka
                 "ko amma ka"
ਣੀ
       ki
                 "ko iksu ki"
Z
                 "kə uksu ku"
       ku
                 "ko ettu ke"
Z٩
       ke
                 "ko ainu kai"
Z99
       kai
Ž۶
                 "ko tumo ko"
       ko
<del>ე</del>უ
       kau
                 "ko tumbo kau"
ž
       kэ
                 "kə titcə kə" ((tijə in Subba 1979))
>
                 "kɔ petcɔ ke" ((pejɔ in Subba 1979))
       kε
```

2. Final consonants

kedumba sək ["conjoined letters", cf. tumma "to meet"] or cuk sək ["small letters"] (? properly cu:k sək, cf Limbu cu:k-pa "small".

```
7°
       kok
                 "ko cu:k ko kok"
                  "ko cu:k no kon"
Z。
       kəŋ
ZΨ
                 "ko cu:k no kon"
       kən
Z_{\mathbf{a}}
       kət
                  "ko cu:k to kot"
                 "ko cu:k po kop"
ZЧ
       kəp
ZΥ
       kəm
                 "ko cu:k mo kom"
                 "ko cu:k ro kor"
       kər
Z,
7º
                  "kə cu:k lə kəl"
       kəl
```

3. Medial (subjoined) consonants

e:ktumba s>k ["after-conjoined letters" (cf. ek "back")]

```
Z<sub>√</sub> kyɔ "kɔ ektum yɔ kyɔ"

Z<sub>√</sub> krɔ "kɔ ektum rɔ krɔ"

Z<sub>√</sub> kwɔ "kɔ ektum wɔ kwɔ"
```

Prosodies

kuse:k sək (translated "phonic symbols" in Limbu sources).

```
Z, kɔ? "kɔ mukphreŋ kɔ?" (glottalization or glottal stop)

Z kɔ: "kɔ kembhreŋ kɔ:" (length)
```

ZZ ko:k "ko ko so.i ko:k" (virāma with length of the preceding vowel)

Printed samples of Limbu script 2001-04-02 11:54

Printed samples of Limbu script:

1. *Tanchoppa* ("Morning Star") newspaper, year 5 no. 7. 20 July 2000. Kathmandu, Nepal. [Front page (600K) in Limbu (Limbu script) and Nepali (Devanagari). The lead story is about the publication of a new Limbu textbook for 3d grade -- see illustration. Computer print.]

- 2. *Gulliver-re lamdik*. (Gulliver's travels). Abridged translation by B. B. Subba (Muringla Nugo). 1989, re-edition 1996. Dept. of Education, Govt. of Sikkim. Gangtok, Sikkim. viii + 88 pp. [Page 1 (64K); offset ms.]
- 3. *Tongsing tokma mundhum* ["Tongsing Ritual"]. Bairagi Kaila. 2052 B.S. [1995-1996]. ix + 389 pp. Royal Nepal Academy, Kathmandu. [One of a series of editions of Limbu rituals with translations, notes, and vocabulary. Page 35 (92K) is the first page of annotated text. The two upper sections on each page are in Limbu (Limbu and Devanagari scripts); the lower section is a Nepali translation (Devanagari script). Computer print.]
- 4. *Sumhalung*. No. 2. 2054 B.S. [1997-1998]. Phekden, Panthar, Nepal. [Limbu literary review in Limbu and Nepali] [p. 113 (64K), a poem by Bhavani Tawahang. The Limbu question mark appears at the end of line 2. Computer print.]

हामीले कागजको दुकामा आफ्नो र

संस्थाको नाम लेख्यौ। त्यसलाई बेलुनभित्र ख्रिराएर फुक्यौ, जनि हावा नजाने गरी बाँधी सबैको जम्मा गरेर अगाडि एकै ठाउँ राख्यौ ।

एकजनाले बेलुन कुर्सिमा राख्यो अनि त्यसमाधि थ्याच्च बत्यो । बेलुन जोडले आवाज निकान्दै दुकामा परिणत भयो । कागज टिपेर पद्यो, जसको नाम आयो, उसले उठेर हात जोड्यो र त्यिह व्यक्ति आएर अर्को बेलुन टिप्यो र पहिलो सायीले गरे जस्तै गऱ्यो । यहि रीतले परिचय कार्यक्रम अघि बद्यो र हाम्रो वर्कशपको शुरुवात

कुरो हो, गएको असार १८ गते त्रिपररेश्वरस्थित सेरिडको सभाकक्षमा भएको कियाकलापको । हामी पूर्व मेचीदेखि पश्चिम महाकालीसम्मका विकासे कार्यकर्ताहरू त्यहाँ भेला भएका थियों । सुरुमा को कस्तो हो, के हो भनेर हामी कमें बोल्यों, सँगै बसेको साधीसँग पनि बोली फुटेन । सायद अरूलाई पनि यस्ते हुँदो हो । बेलुन परिचयले त्यहाँको वातावरणमा अलि

ता ल्यायो । बेला बेला हाँसोले हल उचाल्थ्यो । सेरिड र युनिसेफको संयक्त आयोजनामा

विधि कार्यशाला र मेरो अनुभव भाषा

अनौपचारिक शिक्षाका लागि "पूर्ण भाषा पद्दित र सहभागीद्वारा निर्मित पाठ्यसामाग्री" सम्बन्धी कार्यशाला गोष्ठीमा हामी भेलिएका थियौ । जम्मा जम्मी ९ दिनसम्म चलेको सो कार्यशाला मेरो लागि अत्यन्त फलदायी रहयो। मैले योभन्दा अगाडि ६, ७ वटा जित तालिमहरू लिईसकेको थिएँ तर यो तालिमले मलाई नयाँ अनुभूति प्रदान गरेको छ ।

बिशेष गरी एन.एफ.इ मा संलग्न संस्थाहरूलाई विथ कष्ट तालिम दिइएको थियो। तालिम भनेपछि हात पसार्ने बानी परेका हामीलाई यो पनि नयाँ आयाम हो । तालिममा विकासे गैड सरकारी संस्था, समुदायमा आधारित सामाजिक संस्था किरात याक्युड चुम्लुड, शिक्षण संस्था र अन्तर्राष्ट्रिय सरकारी संस्था युनेस्को जस्ता ४ प्रकारका जम्मा २९ संघ संस्थाहरूको सहभागिता रहेको थियो ।

ब्राजिलियन एजुकेसनिष्ट पाउल क्रेरेद्वारा प्रतिपादित पूर्ण भाषा पहतिले सहभागिहरूलाई साक्षर मात्र होइन, संशक्तिकरण पनि गराउँछ भन्ने पशिक्षक डा.सुमन तुलाधर र घनश्याम

खतिवडाबाट जानकारी पाइयो । वास्तवमा सिकाइ अस्ता नियमहरू पूर्णरूपमा लागू हुन्छन् । वर्थपूर्ण हुनुपर्छ भन्ने सिकाइको नियममा बाधारित यो सिद्धान्तभित्र लर्निङ बाइ बुइङ, होल टु पार्ट, नोवन टु अन्नोवन, टिचिङ इज लाइक कोचिङ

यो विधिमा पाठयपस्तक नहने भएकोले माथिबाट लादिने शिक्षा (बैंकिक एप्रोच) नभै सहभागिहरू के स्तर र बावश्यकताबाट साक्षरता

対対しいる

कक्षा सुरु गरिन्छ । जसलाई प्रोबलम पोजिङ एप्रोच भनिन्छ । जसबाट सहभागिहरूको अनुभव, भाषा ज्ञान तथा आफ्नो वरिपरिको समस्याबाट पढाई सुरु हुने भएकोले उनीहरूको सिकय सहभागिता र सिर्जनशिलता पनि बढ्ने बताइन्छ । तर यसमा सहयोगी कार्यकर्ता सिकय हुन सक्नु चुनौती औल्याइएको छ ।

समग्रमा भन्नु पर्दा साक्षरता कक्षाका विविध विधिहरू मध्ये यो एउटा विधि हो । यो विधिमा सहभागिहरूलाई पद्न, लेस्न सिकाउने मात्र नभे उनीहरूबाटै पाठ्य सामाग्री तयार हुने भएकोले सिकयता बढ्ने र एक्सनमा जान सक्ने हुन्छन् भन्ने बिज्ञहरू बताउँछन् । यो विधिबाट स्यानीय आवश्यकता, परिवेश, भाषा, संस्कृतिको पनि प्रतिनिधित्व हुने भएकोले हाम्रो जस्तो मुलुकमा

प्रभावकारी हुने महसुस गरिएको छ । तालिममा धेरै नयाँ नयाँ ज्ञान र सीप हाँ सिल गर्न सकेको सहभागिहरूबाट महसुत भएको पाइयो । मनोरञ्जन कमिटिका सायीहरूबाट हरेक दिन पर्याप्त मनोरञ्जन प्रदान भएकोले नौ दिन चिप्लेको थाहै भएन । साथी विनोद जैज्बाट खेलाइएको नानी खेलाउने खेलमा बृद्धि थापालाई परेको आपत सम्भना योग्य रह्यो ।
