

## A. Administrative

1. *Title:* Proposal to add Greek Letter Lowercase Heta and Greek Letter Capital Heta to the UCS
2. *Requester's name:* Nick Nicholas
3. *Requester type:* Expert contribution
4. *Submission date:* 2005-01-01
5. *Requester's reference:* —
- 6a. *Completion:* This is a complete proposal
- 6b. *More information to be provided?* No.

## B. Technical — General

- 1a. *New Script? Name?* No.
- 1b. *Addition of character(s) to existing block? Name?* Yes. Greek or Greek Extended.
2. *Number of characters in proposal:* Two
3. *Proposed category:* B.1. Specialized (small collections of characters)
4. *Proposed Level of Implementation (1, 2 or 3) (see Annex K in P&P document):* Level 1 noncombining character
- Is a rationale provided for the choice?* No
5. *Is a repertoire including character names provided?* Yes
  - a. *If YES, are the names in accordance with the "character naming guidelines" in Annex L of P&P document?* Yes
  - b. *Are the character shapes attached in a legible form suitable for review?* Yes
- 6a. *Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard?* —
- 6b. *If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:* —
7. *References:*
  - a. *Are references (to other character sets, dictionaries, descriptive texts etc.) provided?* Yes
  - b. *Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached?* Yes
8. *Special encoding issues:*

*Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?* Yes
9. *Additional Information:* See below

## C. Technical—Justification

1. *Has this proposal for addition of character(s) been submitted before?* No

2. *Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?* Yes

*If YES, with whom?* Subscribers of Unicode Greek and Epigraphical mailing lists.

*If YES, available relevant documents:* —

3. *Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included?* Scholarly community and individuals interested in Greek linguistics and epigraphy

*Reference:* —

4. *The context of use for the proposed characters (type of use; common or rare):* Common in Greek epigraphy, occasional in Ancient Greek linguistics

*Reference:* —

5. *Are the proposed characters in current use by the user community?* Yes

*If YES, where?* *Reference:* Characters are present in various publications on Ancient Greek linguistics, and in publications of epigraphic corpora

6. *After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP?* Yes

*If YES, is a rationale provided?* Contemporary use, keeping character together with other Greek characters

*If YES, reference:* —

7. *Should the proposed characters be kept together in a contiguous range (rather than being scattered)?* Yes: the two characters differ only in case.

8. *Can any of the proposed characters be considered a presentation form of an existing character or character sequence?* No (but see below)

*If YES, is a rationale for its inclusion provided?* —

*If YES, reference:* —

9. *Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters?* No

*If YES, is a rationale for its inclusion provided?* —

*If YES, reference:* —

10. *Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character?* Yes

*If YES, is a rationale for its inclusion provided?* Yes

*If YES, reference:* —

11. Does the proposal include use of combining characters and/or use of composite sequences? No

If YES, is a rationale for such use provided? —

If YES, reference: —

Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided? —

If YES, reference: —

12. Does the proposal contain characters with any special properties such as control function or similar semantics? No

If YES, describe in detail (include attachment if necessary) —

13. Does the proposal contain any Ideographic compatibility character(s)? No

If YES, is the equivalent corresponding unified ideographic character(s) identified? —

If YES, reference: —

## Proposal

This is a proposal for two characters, GREEK SMALL LETTER HETA, and GREEK CAPITAL LETTER HETA. The reference glyph for the characters is to be 𐀀 𐀁 (the “tack heta”) as used in Jeffery (1990).

The tack heta symbol is one of the two transliterations used in Greek Epigraphy to represent the phoneme /h/, corresponding to the use of the diacritic rough breathing (U+0314 Combining Reversed Comma Above) in conventional Greek orthography. The other epigraphical transliteration, which is more common especially in present-day use, is Latin capital and small H.

The epigraphical codepoint heta abstracts from the various glyphs used in inscriptions to represent the letter heta. Most regional (*epichoric*) variants of the Greek script had for their heta the same form as the Old Italic codepoint U+10307 Old Italic Letter He (𐀀), while a few had the same form as U+0397 Greek Capital Letter Eta.

The ‘tack’ glyph was originally a local variant of heta in the Greek colonies of Heraclea and Tarentum in Italy. The ancient received wisdom was that the H-like heta glyph was broken in two, with the left half representing /h/ (the glyph used in Tarentum), and the right half the absence of /h/. Diacritic versions of the ‘left tack’ and ‘right tack’ arose within a few centuries, and eventually evolved into the rough and smooth breathing diacritics of conventional Greek orthography, U+0314 Combining Reversed Comma Above and U+0313 Combining Comma Above. (The reference glyphs for U+0485 Combining Cyrillic Dasia Pneumata and U+0486 Combining Cyrillic Psili Pneumata display those tacks used as diacritics.) However, there is no evidence known to me that the ‘right tack’ was ever actually used as a letter, as distinct from a diacritic; the ancient account connecting the diacritics to the Italian letter may have been a post hoc rationalisation, and has been disputed in the literature.

The same letter that in Western Greek alphabets was used to write /h/, and called heta, was

used in Eastern Greek alphabets to write /ɛ:/, and called eta. (The standard Greek alphabet is of Eastern origin, and its value of (h)eta displaced the Western form in the 4th century B.C.) Nonetheless, epigraphers make a point of keeping eta and heta distinct: lowercase heta is never written in transcription as η, but as ἥ or h. (More precisely, when the Η or Η letter in an inscription has the phonetic value /h/ rather than /ɛ:/, it is transcribed as ἥ or h instead of η.) When used in titlecase, Capital Latin H is identical to Capital Greek Eta; the absence of breathing marks is then used to differentiate heta from eta.<sup>1</sup> Thus:

- Inscription (using Old Italic glyphs): ΗΥΦ ΗΕΛΛΕΜΟΣ
- Epigraphical transcription, using ‘tack’ heta: ἥυφ ἥέλλενος
- Epigraphical transcription, using Latin h: huφ Ἡέλλενος (variants: huφ Ἡέλλενος, huφ Ἡέλλενος)
- Conventional orthography: ὑφ Ἑλληνας.

Epigraphy insists on using a letter rather than a diacritic to transcribe what was a letter in the inscription. This allows for letter-level markup, which would be impractical on a diacritic, e.g. [ἥ]έλλενος (the heta is conjecturally emended by the editor), or ἥέλλενος (the heta is only partly preserved) (Figure 1). Although the linguistic discussion of Ancient dialects tends to use normalised orthography in abstract discussion and lexicography, when inscriptions are cited, they are normally cited with hetas, rather than conventional diacritics.

The tack heta is functionally equivalent to several extant codepoints, but cannot be conflated with any of them.

- Because of the requirement in epigraphy for letter-level markup, it would be impossible to conflate heta with the diacritic, and such a conflation would be impossible in Unicode, even though Ἡέλλενος and Ἑλληνας are the same word (and in fact are typically collated as the same word).
- The Old Italic codepoint U+10307 Old Italic Letter He originates in the usual form of heta in Greek antiquity, but it is not the glyph conventionally used in modern epigraphy (see below), and would not be recognised as a permissible alternative transcription by epigraphers. At any rate, Old Italic script should be kept distinct from Greek unless there is no alternative, and the Old Italic codepoint does not allow for a casing contrast.
- The Latin H and tack heta are glyph variants of the same underlying character in the context of Greek epigraphy, as is very clear in Figures 4 and 5. Nonetheless, it would be impractical to implement tack heta as a presentation variant of a Latin character, especially when that variant occurs not in a Latin script context at all, but a Greek

---

1. Prof Klaus Hallof, director of the *Inscriptiones Graecae* corpus, has communicated to me that this kind of ambiguity is unacceptable, and recommends against any usage of Capital Latin H for heta.

handled by current Unicode, its encoding as Latin H is prevalent. The Latin H is so prevalent that Prof Klaus Hallof, director of the *Inscriptiones Graecae* corpus, has insisted to me that the tack heta is to be dispreferred and is avoided in the *IG*—which indicates there may well be resistance to a proposal for a distinct heta codepoint. He has also pointed out that the tack heta sign is identical to the numeric sign U+10142 Attic Acrophonic Symbol One Drachma (provisionally accepted in Unicode), although contextual disambiguation of the two would usually be easy.

There are occasional attempts to differentiate the glyph for <h> = heta from <h> = Latin H (Figure 4, Figure 6); but for the most part the heta <h> is identical to the Latin <h>, being at most italicised (Figure 5). The tack glyph is used in Jeffery’s (1990) influential history of the Greek script, and sporadically in grammars and epigraphy; it is more frequent in publications on Heraclea and Tarentum, where the tack was native and there is a need to differentiate eta from heta (Figure 3, 4, 5). But standard epigraphical corpora have used the Latin h for well over a century (including inscriptions from those two colonies).

Further background on the history of heta and eta is provided in Nicholas (2003).

## Examples

Figure 3. Roberts (1887:275; 208). Tack heta used for inscription from Tarentum (left); conventional rough breathing used for inscription from elsewhere in Italy (right).

**1519. Tarentum. Small terracotta objects.** F.Ghinatti, *Sileno* 23 (1997) 120-126. discusses the function of the many small terracotta disks found in Tarentum; they contain proper names, single letters, or letters in ligature, and small relief-figures. He focuses on the most frequent inscriptions:  $\text{Ϝημιω(δέλιον)}$ ,  $\text{τετάρ(τιον)}$ ,  $\text{τριταία}$ ,  $\text{τρίτω}$  and  $\text{δυοτρι(ταία)}$ ; see *SEG* XXXVI 892-906 and 1538. He prefers to interpret the figures as indicators of taxes or customs-dues paid on goods in Tarentum's harbor; the names are those of manufacturers or merchants. He refers to similar objects from Lokroi, with the letters ΠΠΑ, interpreted by G. as  $\text{πρά(κτορες)}$ . In Tarentum the  $\text{πράκτορες}$  may have been customs-officials, who levied taxes on goods in transit. The goods were divided into at least four categories of payment, based on the value of the goods: those paying a tetartermorion/tetration (1/48 stater), half an obol ( $\text{Ϝημιωδέλιον}$ ; 1/2-stater), a tritemorion ( $\text{τριταία}$ ; 1/16 stater), and a triemiobolos ( $\text{δυοτριταία}$ ; 1/8 stater); the corresponding tax-rates were 2, 4, 6 and 12%.

- A  $\text{ἥσα μὲν ἔτι νύνα(ι)}$   
 B  $\text{αβγδεϜηζ}$  (dextrorsum) |  $\text{ζηϜδγβ}$  (sinistrorsum)

B. 2. read as  $\text{ζδϜηβ}$  by G.Buchner in an addendum on 231.

Figure 4. *Supplementum Epigraphicum Graecum* 47 (1997): 420, 401. Tack heta used for inscriptions in Tarentum (top); Latin h (shrunk to match lowercase Greek) used for inscription from Cumae, also in Italy (bottom).

18. Der Häuchlaut wird durch ein besonderes, aus H differenziertes Zeichen  $\text{Ϝ}$  wiedergegeben, das der Vorfahr des Spiritus asper ( $\text{Ϝ Ϝ Ϝ}$ ) ist. Heraklea teilt diese spezifische Eigentümlichkeit mit Tarent (z. B.  $\text{Ϝηράκλητος}$  auf einer Münze); die Aussprache des Häuchlautes scheint kräftiger als sonst gewesen zu sein. Abweichend vom Attischen steht das Hauchzeichen in  $\text{ἥακρο(-σκιρίαίς)}$ ,  $\text{ἥισος}$  (auch in der *Koinḗ*!), s. unter 10. (vielleicht unter dem Einfluß von  $\text{ἡομο-}$ ),  $\text{ἡοκτώ}$ ,  $\text{ἡεννέα}$  (und Ableitungen dieser beiden durch Analogie nach  $\text{ἑπτά}$ ),  $\text{ἡάρνησις}$ ,  $\text{ἡοίσοντι}$

Figure 5. Thumb (1932:97). Tack heta used to illustrate the epichoric alphabet of Tarentum and Heraclea (line 4); but Latin h used to discuss the distribution of /h/ as a phoneme, in normalised Greek orthography (lines 7–10). The tack is thus used as a glyphic variant of underlying h.
