**1. Introduction.** Anatolian Hieroglyphs were first thought to have been used for the Hittite language, because they first appeared on personal seals from Hattusha, the capital of the Hittite Empire. While Hittites did make use of the characters on seals and on their monumental inscriptions, the characters were used as text primarily for the related language Luwian; a few glosses in Urartian and some divine names in Hurrian are known to be written in Anatolian Hieroglyphs. Most of the texts are monumental stone inscriptions, though some letters and accounting documents have been preserved inscribed on strips of lead.

**Figure 1.** Anatolia, showing where the Luwian, Hittite, Urartian, and Hurrian languages were spoken.

**2. Structure.** Anatolian Hieroglyphs have both syllabic and logographic components. Words may be represented entirely with logographs (in particular at the earlier period), or with phonetic complements along with the logogram in a variety of configurations. For the word *wawis* ‘cow’ for instance, the following spellings occur:

BOS

(BOS)    

wa/i-wa/i-sa

BOS-wa/i-sa

Characters may be written left-to-right or right-to-left, and texts longer than two lines are mostly boustrophedon; as with Egyptian, one reads a line into the faces of the people and animals. Lines are often divided from one another by horizontal rules. Within a line, characters are written in vertical columns, mostly from top to bottom, though for aesthetic reasons they may be placed out of phonetic or logical order. For modern lexicographical use it is anticipated that straightforward linear left-to-right placement of characters will find the most favour for its practicality.

**3. Punctuation and spacing.** In some texts, word division is indicated with the use of U+12622 ⠼ ANATOLIAN HIEROGLYPH A386 or its variant U+12623 ⠼ ANATOLIAN HIEROGLYPH A386A. To mark logograms, the characters U+1263B ➤ ANATOLIAN HIEROGLYPH A410 BEGIN LOGOGRAM MARK and U+1263C ← ANATOLIAN HIEROGLYPH A410A END LOGOGRAM MARK are optionally used, flanking the logogram as in ➤← ‘wood’; see Figure 2. The characters U+12664 ⠼ ANATOLIAN HIEROGLYPH A450 (which occurs very frequently) and U+12564 ⠼ ANATOLIAN HIEROGLYPH A209 (which occurs much more rarely) are occasionally used in what looks like a “space-filler” function, often at the end of a word. Often when hieroglyphs are written, the practice is to try to reproduce the layout of the original text, rather than to write text out in modern sentences. However, in such cases, U+200B ZERO-WIDTH SPACE and/or U+0020 SPACE may be used as needed. One combining character is used, namely, U+1261F ◊ ANATOLIAN HIEROGLYPH A383 COMBINING RA OR RI which attaches fairly productively to Anatolian characters (it always touches its base character).

**4. Repertoire.** Through the course of the history of the decipherment of Anatolian Hieroglyphs, a standardized catalogue of letters has been drawn up; the “Laroche set” of numbers 1-497 from Laroche 1960 form the basis for the repertoire, supplemented by additions 501-524 from Hawkins and Çambel 2000. The encoding proposed here is based on this standardized catalogue, despite the fact that several of the characters are now considered to be variants of each other. ⠼ 183 is now known to be a variant of ⠼ 423 which has a reading *ku*; ⠼ 352, ⠼ 353, ⠼ 354, and (possibly) ⠼ 519 are all variants of ⠼ 345 PITCHER. Although this might *seem* to be “character duplication”, really it is not. The encoding of these characters will enable not only the representation of text in the Luwian language, but also the representation of the long history of Anatolian studies, where the catalogue entities have been distinguished in discussions of the decipherment. Scholars wishing to publish normalized texts might avoid the use of the “redundant” letters, or might choose to use them as indicative of the temporal or geographical provenance of a text. But documents relating to the decipherment itself distinguish them regularly, and that distinction must be maintained. The names list contains cross references from variants to the main character in each instance. This is considered vital information by specialists.

**5. Character names.** The character names for Anatolian hieroglyphs are somewhat complex. A single coherent set of character names does not exist, but it has been possible to devise one in working out this proposal.

**5.1 The name of the script.** As suggested in the introduction above, the names “Anatolian Hieroglyphs”, “Luwian Hieroglyphs”, and “Luvian Hieroglyphs” might be applied to this script; the name “Hieroglyphic Hittite” is a misnomer for the language, and “Hieroglyphic Luwian” refers to a variety of the Luwian language (as opposed to “Cuneiform Luwian”). Since the script is used for languages other than Luwian, and since that language may be spelled “Luwian” or “Luvian”, specialists have suggested that the name “Anatolian Hieroglyphs” is the best choice, even if this is clearly a syllabic system and “hieroglyphic” has often been used for a pictorial/logographic system.

**5.2 The use of catalogue numbers.** Catalogue numbers were assigned by Meriggi and Güterbock but these were superceded by the numbers 1 to 497 which Laroche assigned and published in 1960 in *Les hiéroglyphes hittites*. The Laroche numbers have been taken as standard by subsequent researchers; Hawkins and Çambel 2000 augment this list with their numbers 501 to 524. In a number of instances, Laroche lists variants within a given catalogue number, thus: Laroche ⠼ 457 (1) is distinguished from Laroche ⠼ 457 (2). The naming convention followed here for this is similar to that used by Egyptologists for Egyptian characters: the first is Laroche 457, the second Laroche 457A. (Not all of the variants listed in Laroche 1960 are distinguished in this way; Laroche ⠼ 460 (1) and ⠼ 460 (2) are simply glyph variants and only a single 460 is proposed for encoding.)

**5.3 The use of prefixes with the catalogue numbers.** As with the Linear B catalogue numbers, the Laroche entities are typically given simply as numbers. UCS naming conventions, however, require that name elements begin with a letter, not a digit. In the case of Linear B, the letter B was prefixed to each of the catalogue names. For Anatolian Hieroglyphs, the letter A has been prefixed to each of the catalogue names. But it could be useful to use a range of letters to correspond to the classification Laroche made of the characters. Alan Gardiner broke the different Egyptian Hieroglyphs into 26 categories, which he labelled with different letters of the alphabet (A, B, C ... Y, Z, AA, omitting J). Similarly, Laroche broke the different Anatolian Hieroglyphs into 10 categories which he labelled with Roman numerals. The naming convention here could assign letters to the Roman numerals:

I.	Corps humain, vêtements	→	Axxx	"The human body and clothing"
II.	Animaux	→	Bxxx	"Animals"
III.	Végétaux	→	Cxxx	"Plants"
IV.	La nature	→	Dxxx	"Nature"
V.	Bâtiments	→	Exxx	"Buildings"
VI.	Armes, outils, meubles, instruments divers	→	Fxxx	"Arms, tools, furniture, and other instruments"
VII.	Vases, récipients	→	Gxxx	"Vases and receptacles"
VIII.	Symboles	→	Hxxx	"Symbols"
IX.	Traits, numéraux, formes géométriques	→	Jxxx	"Lines, numbers, and geometric shapes"
X.	Varia	→	Kxxx	"Varia"
	Hawkins' "Additional Signs"	→	Mxxx	"Additional Signs".

Since no letters were traditionally assigned to these categories, the letters I and L would not be used because they may be ambiguous depending on typeface and case. (As noted above, Gardiner eschewed the letter J when he assigned letters to the Egyptian classes, probably because the letter did not exist in Latin.) Because some of the characters were originally placed into classifications to which they don't belong, it could also be possible now to use the lettering convention to make the relation of main sign and variant sign clearer; so 𩫑 519 mentioned above could be named g519 because it belongs in "Vases and receptacles" along with the other pitchers, not m519 though most of the characters in 501-524 are M. Because the catalogue numbers are serial, users would also be able to determine the original group.

**5.4 Latin notes in the names list.** Scholars traditionally use Latin names to describe the characters, and in some of them the Latin is supplemented with full stops and plus signs in order to assist identification. The full stop indicates a group in which the elements are separate (as in 𩫑 BOS.MI) and the plus sign indicates that the elements form a graphic unit (as in 𩫑 BOS+MI). Informative notes in the names list present these Latin glosses. In addition, characters may have one or more phonetic readings, so the readings are also presented in the notes. Though Latin names are capitalized and/or italicized in the handbooks, lowercase is maintained due to naming conventions for the annotations. The subscript "x" is identified in the annotations as "-x", as in the annotation "*= syllabic ha-x*" for U+12952 ANATOLIAN HIEROGLYPH BVA314.

**5.5 Cross-references in the names list.** The cross references indicate the relationship of variant characters to the main character, such as U+12483 𩫑 ANATOLIAN HIEROGLYPH A004 > U+12561 𩫑 ANATOLIAN HIEROGLYPH A207. This kind of annotation provides vital information to the user of the names list, namely, guidance as to the proper character to use for a normalized text, since the variant forms have been deemed obsolete. This is essential information which should be retained in the names list.

**5.6 Issues with Latin names and phonetic readings in the names list.** Earlier drafts of this proposal received criticism regarding the annotations, and their use has been minimized here

**6. Numbers.** Further research needs to be done to ensure that a sufficient quantity of Anatolian numbers are encoded to be practical in use. At present numbers for 1, 2, 3, 4, 5, 8, 9, 10, 12, 100, and 1000 have been proposed for encoding.

**7. Text processing.** For non-linear display of Anatolian Hieroglyphs, the conventions of the Egyptological *Manual de codage* should be sufficient, and indeed it appears that software which can support Egyptian Hieroglyph rendering can also support Anatolian.

**8. Future expansion.** The majority of the attested Anatolian Hieroglyphic characters are proposed in this document. It is certainly possible that new characters will come to light, and can be added in due course. Eighty-three unassigned code positions are allocated at the end of the block against such additions.

BOS<sub>2</sub>+MI: -

BOS<sub>2</sub>.MI: Kat. 243 (*Mizri-*), 246 (*Mizri-*), 248 (*Mizri-*), 249(?), 274(?).

*mi* internal (+*MI*) or external (.*MI*); also, since *mu* properly consists of *u* + *mi*, if *mi* is omitted, as frequently, *mu* becomes indistinguishable from *u* (i.e. some of the forms BOS/BOS<sub>2</sub>, cursive).

**Reading.** Long recognized, though the variants caused problems, confirmed by digraphs, Ras Shamra Hier. *mu* (cursive + *MI*) = Cun. *-mu-wa* (*Šauška-muwa*); Meskene (*Mudri-Tešub*); Nişantepe Kat. 248 = SBo II no. 81, cf. 80 (*Mizri-muwa*).

**Usage.** Syllabographic *mu* straightforward (e.g. Kat. 11), but *mu* final usually represents *mu(wa)* (Kat. 18, 27–28, 141–143 and 145–149, 192–193, 204, 234, 240, 242–249, 299–302, 303, 365–372, 415–417, 454–455, 460); initial *mu* is also often *mu(wa)* (Kat. 260–271, 272–273). Note the writing *mu-wa/i-á* for *Muwa* (Kat. 255–259). Uncertain: *la-mu* (Kat. 201–202); *pu-(m)u* (Kat. 339–342); *tu-mu* (Kat. 466).

**Figure 5.** Discussion of the reading of “mu” from Herbordt 2005.

*Note to reviewers: This is a preliminary proposal. The code points shown are merely suggestions for a possible placement. In the names list, most of the comments are in Latin. Those which have a Luwian phonetic value are identified as syllabic. Cross references point from a variant character to the main character which should be used in normalized texts.*
