Remove the V2-8D4D source from 06F58 entry;

Remove the TF-3862 source from 0FA23 entry;

In the 24319 entry, replace 'G_FZ_BK' with 'G_FZ'.

(The following text is identical to ISO/IEC 10646, except for the renumbered note, but is linked to the new file.)

Click on this highlighted text to access the reference file.

NOTE 5 – The content is also available as a separate viewable file in the same file directory as this document. The file is named: "CJKU_SR.txt".

Page 22, Sub-clause 27 Source references presentation for BMP CJK Unified Ideographs

In the first paragraph replace 'code tables' with 'code charts.

Page 22, Clause 27 Source references for CJK Ideographs

Insert a new sub-clause 27.3 and update the following sub-clause number and its references.

27.3 Source reference presentation for CJK Unified Ideographs Extension C

In the code charts describing the CJK Unified Ideographs Extension C, entries are arranged as follows.

Ucode	C		J	K	U	V
	G	M	T			
2AB7C	𫰼		𫰼			𫰼
	G_ZFY00619		TC-3248			V04-4876

The leftmost column of any entry shows the code position in ISO/IEC 10646. Each of the other columns shows the graphic symbol for the character and its coded representation in the source standard also identified in the table entry..

Page 28, Clause 34, Code Tables and list of character names

Replace first paragraph by following.

Detailed code tables and list of character names for the BMP, SMP, SIP, and SSP are shown on the following pages.

Code tables are arranged by blocks which may span several pages.

© ISO/IEC 2007 – All rights reserved

Each code table is followed by a corresponding character names list, except the CJK UNIFIED IDEOGRAPHS blocks and the HANGUL SYLLABLES blocks.

34.1 Code table

Code tables are presented in arrays of graphic symbols representing the characters organized in one to sixteen columns of sixteen symbols each. The lower digit of the coded representation is indicated in the left margin while the remaining upper digits are indicated in the top margin. The full coded representation for each character is also indicated under each representative graphic symbol.

34.2 Character names list

The character names lists contain some normative information such as the code position and the character name. They also provide additional information clarifying some feature of a character, such as its naming or usage, or its associated graphic symbol. In addition to the code position, the graphic symbol, and the character name, the following informative items may appear in these names list:

- Subheads grouping various subsets of a given block. For example, the LATIN-1 SUPPLEMENT block contain “Latin-1 punctuation and symbols”, “Letters”, and “Mathematical operator”.
- Explanatory text describing context for a subhead or a whole block.
- Aliases, either preceded by ‘=’ or ‘※’ indicate alternate names for characters.
- Cross references, preceded by ‘→’ indicates a related character of interest.
- Information about languages, preceded by ‘•’ indicates a non exhaustive list of languages using that character. For bicameral scripts, the information is only provided for the lower case form of the character.
- Case mappings, also preceded by ‘•’, only when it cannot be derived simply from the names.
- Other information about a character, also preceded by ‘•’, describing name peculiarity, historical consideration, or any noteworthy aspect of a character.
- Decompositions, preceded by ‘≡’, or ‘≈’ describing various mapping between characters.

The following example describes various fragments of name lists including these informative items.
