Title: Proposal for encoding the Old Turkic script in the SMP of the UCS

Source: China, Ireland, the UK, and UC Berkeley Script Encoding Initiative
(Universal Scripts Project)

Status: National Body and Liaison Contribution

Action: For consideration by JTC1/SC2/WG2 and UTC

Date: 2008-01-25

Introduction. The Old Turkic script has its roots in the Aramaic script, probably via the scripts which developed for Iranian languages. It was used in a wide area stretching across the grasslands of Mongolia, in particular concentrated near the Orkhon River in Mongolia and the Yenisei River in Siberia. Old Turkic script appears to have been put to widespread and popular use for grave stelae, border signs or graffiti of all sorts in hundreds of inscriptions in South Siberia. When, around 700 CE, the Türk founded their empire in Mongolia (which went on to conquer a vast area between China and present day Turkmenistan, all the way down to Afghanistan in the South and the Urals in the North), they needed a national script for their national monuments. The script has a number of names, which can be rendered in English as Old Turkic, Turkic Runiform, Turkic Runes, Orkhon, Yenisei. In Turkish it is sometimes called *Kök Turki* ‘Old Turkic’. Resemblances to Germanic Runes are entirely superficial and accidental.

The texts found in the Orkhon River valley in the 19th century are the earliest-known examples of writing in any Turkic language. The Orkhon inscriptions date from the early 8th century CE. The inscriptions on the bank of the Orkhon river were the first to be deciphered because they are bilingual with Chinese. There are no more than 6 or 7 of them. About 50 years later the Uighur empire replaced the Türk empire, and its rulers also put up some stelae, even fewer in number, this time along the (nearby) river Selenge (also in Mongolia). Later inscriptions dating from the later 8th century occur in a variant of the script alphabet, known as Yenisei or Siberian runes, have also been found around Yenisei and other parts of Siberia. Old Turkic is used to write Iranian text in a few manuscripts.

Structure. Old Turkic writing is more-or-less alphabetic, and is inscribed from right to left in rows running from bottom to top. Modern editors use right-to-left directionality but usually set their text in rows running from top to bottom. (Boustrophedon writing is not unknown, though it is rather rare. When the writing changes direction, the letter shapes are mirrored. This happens regardless of the character’s base shape; ↴ U+10C00 ORKHON A appears as ↵ when written in boustrophedon, and ↵ U+10C01 YENISEI A appears as ↴.)

Describing Old Turkic as “more-or-less alphabetic” is more-or-less accurate. Consonants have a sort of implicit vowel associated with them; the vowel precedes as in the character names here. It also happens that a vowel *after* a letter is also implicit. But that only happens because it is implicit with reference to the *next* consonant letter. If there is no *next* consonant letter, that is, if the word ends in a vowel, it *always* is explicit. This fact is supported also by characters which appear to be ideograms: ‘arrow’ is /ok/ in Old Turkic, and the characters ↵ U+10C36 ORKHON OQ and ↶ U+10C37 YENISEI OQ have arrow shapes. /ay/ is ‘moon’, and ↷ U+10C16 ORKHON AY looks like one; /äb/ means ‘home, tent’ and ⌘ U+10C0B ORKHON AEB

and U+10C0C YENISEI AEB have a tent shape (evidently very similar to the actual tents used in the area).

All of this affects reading and orthography, not processing, however. Initial and medial vowels are often not explicitly written, though in final syllables they often are; compare 𐰽𐰺𐰸 $\text{ÇGBT} \leftarrow$ reversed as ᐅᐅᐅᐅ *otboğaç* ‘a ferocious bull, a fire-breathing dragon’ and 𐰽𐰺𐰸 $\text{IRNT} \leftarrow$ reversed as ᐅᐅᐅᐅ *tengri* ‘deity’.

Character set and naming convention. The set of characters proposed here includes both Orkhon and Yenisei “variants”. Old Turkic orthographies vary and there is overlap between the letters used in different areas, just as there are letters shared between Orkhon and Yenisei. In the character names, ORKHON is applied to letters typically found in the Orkhon area, and YENISEI to letters typically found in the Yenisei area, and those names do not imply more than that. Non-significant glyph variants have been unified. The possibility of treating Orkhon and Yenisei characters as font-dependent (which would reduce the number of characters from 71 to 46) has been explored but rejected, as the distribution of the forms cannot simply be predicted by the provenance of an inscription. The proposed encoding is favoured by experts both in China and in Europe and permits a comprehensive representation of texts of all kinds.

While some consonants are neutral, others are associated with either front or back vowels. In von Gabain’s transcription, L^1 is written for back-vowel consonants, L^2 for front-vowel consonants, and L^0 for neutral consonants (the example 𐰽𐰺𐰸 and 𐰽𐰺𐰸 above could be transliterated as $T^1B^1G^1C^0$ and $T^1N^1R^2I$). The naming convention here writes A in front of L^1 consonants, AE (for \ddot{a}) in front of L^2 consonants, and E in front of neutral consonants. There are also I consonants, and O is used to represent some consonants which are either *o* or *u*; two vowel letters have the name OE which similarly represents \ddot{o} or \ddot{u} . All of this is indicative of the strength of the feature of vowel harmony in Turkic languages.

Ordering. The order of the characters in the code charts is indicative of their alphabetical order. However, since the character model for Old Turkic supports a superset of characters used in different geographic areas, about half the characters are sorted together at the first level and only differentiated for tie-breaking. This ensures that a word like 𐰽𐰺𐰸 , which could also be written 𐰽𐰺𐰸 (using all of the Yenisei letters), can be found in one place in a word-list. Superscript y in the list below identifies the Yenisei letters.

$\text{𐰽} a << \text{𐰺} ay < \text{𐰸} \ddot{a} < \text{𐰽} i << \text{𐰽} \ddot{i} < \text{𐰽} e < \text{𐰽} o < \text{𐰽} \ddot{o} << \text{𐰽} \ddot{ö} <$
 $\text{𐰽} ab << \text{𐰽} aby < \text{𐰽} \ddot{a}b << \text{𐰽} \ddot{a}by < \text{𐰽} ag << \text{𐰽} agy < \text{𐰽} \ddot{a}g << \text{𐰽} \ddot{a}gy < \text{𐰽} ad << \text{𐰽} ady < \text{𐰽} \ddot{a}d <$
 $\text{𐰽} ez << \text{𐰽} ezy < \text{𐰽} ay << \text{𐰽} ay < \text{𐰽} \ddot{a}y << \text{𐰽} \ddot{a}y < \text{𐰽} \ddot{a}k << \text{𐰽} \ddot{a}ky < \text{𐰽} ok <$
 $\text{𐰽} al << \text{𐰽} al < \text{𐰽} \ddot{a}l < \text{𐰽} elt < \text{𐰽} em < \text{𐰽} an < \text{𐰽} \ddot{a}n << \text{𐰽} \ddot{a}ny < \text{𐰽} ent < \text{𐰽} enc << \text{𐰽} ency <$
 $\text{𐰽} eñ << \text{𐰽} eñy < \text{𐰽} aḡ < \text{𐰽} eḡ << \text{𐰽} eḡy < \text{𐰽} ep < \text{𐰽} op < \text{𐰽} ic < \text{𐰽} ec << \text{𐰽} ecy <$
 $\text{𐰽} aq << \text{𐰽} aqy < \text{𐰽} iq << \text{𐰽} iqy < \text{𐰽} oq << \text{𐰽} oqy < \text{𐰽} ar << \text{𐰽} ary < \text{𐰽} är <$
 $\text{𐰽} as < \text{𐰽} \ddot{a}s < \text{𐰽} aš << \text{𐰽} ašy < \text{𐰽} eš << \text{𐰽} ešy < \text{𐰽} at << \text{𐰽} aty < \text{𐰽} ät << \text{𐰽} äty < \text{𐰽} ot < \text{𐰽} baš$

Punctuation. The character U+205A TWO DOT PUNCTUATION is used for a variety of purposes. The actual appearance of this varies in different manuscripts and editions. Many instances of this use a much tighter form of the punctuation, with the dots closer together, as in Figures 3 and 12. The character U+2E30 RING POINT is sometimes used as a separator just as U+205A TWO DOT PUNCTUATION is, as in Figure 9.

Figures

The characters of the old Turkic script are stable in form. Some of them, however, have varieties which slightly differ from each other.

The characters are given in the following table.

Figure 1b. Table of Old Turkic letters, from Tekin1968.

1. 12. Origin of the Alphabet

Various theories have so far been put forward on the origin of the Turkic 'runic' script. Otto Donner, still before the script was deciphered, drew attention to the general conformity between the characters of the Yenisei script, that is, the Turkic 'runic' script, and the Lycian and Carian alphabets of Asia Minor of the antiquity, and assumed that the Yenisei script might have been derived from these alphabets.³ Thomsen, who deciphered the Turkic 'runic' script, did not accept this assumption and put forward the theory that the Turkic alphabet was derived from the late Semitic (Aramaic) alphabet, with or without an Iranian intermediary.⁴ Aristov and Mallitskiy suggested that the letters of the Turkic 'runic' script might have been developed from the Turkic tamgas.⁵ According to Polivanov,

Yenisei inscriptions, and in the manuscripts found in Eastern Turkestan: $\Upsilon = s^1$ (in back-vocalic words), $\Upsilon = \underline{e}$ (closed e), \diamond , $\odot = \underline{q}^1$, \mathcal{B} , $\mathcal{X} = \underline{up}$ (in the manuscripts), $\mathcal{A} = \underline{ot}$ (in İrq Bitig), $\wedge = \underline{\check{s}}$.

Figure 13. Selections from several different editions of Old Turkic texts.

A. Administrative

1. Title

Proposal for encoding the Old Turkic script in the BMP of the UCS

2. Requester's name

China, Ireland, the UK, and UC Berkeley Script Encoding Initiative (Universal Scripts Project)

3. Requester type (Member body/Liaison/Individual contribution)

National Body and Liaison contribution.

4. Submission date

2008-01-25

5. Requester's reference (if applicable)

6. Choose one of the following:

6a. This is a complete proposal

No.

6b. More information will be provided later

Yes.

B. Technical – General

1. Choose one of the following:

1a. This proposal is for a new script (set of characters)

Yes.

1b. Proposed name of script

Old Turkic.

1c. The proposal is for addition of character(s) to an existing block

No.

1d. Name of the existing block

2. Number of characters in proposal

71.

3. Proposed category (A-Contemporary; B.1-Specialized (small collection); B.2-Specialized (large collection); C-Major extinct; D-Attested extinct; E-Minor extinct; F-Archaic Hieroglyphic or Ideographic; G-Obscure or questionable usage symbols)

Category E.

4a. Is a repertoire including character names provided?

Yes.

4b. If YES, are the names in accordance with the "character naming guidelines" in Annex L of P&P document?

Yes.

4c. Are the character shapes attached in a legible form suitable for review?

Yes.

5a. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard?

Wushour Silamu and Michael Everson.

5b. If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:

Wushour Silamu and Michael Everson, Fontographer.

6a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided?

Yes.

6b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached?

Yes.

7. Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?

Yes.

8. Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see Unicode Character Database <http://www.unicode.org/Public/UNIDATA/UnicodeCharacterDatabase.html> and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

See above.

C. Technical – Justification

1. Has this proposal for addition of character(s) been submitted before? If YES, explain.

No.

2a. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?

Yes.

2b. If YES, with whom?

Experts at Xinjiang University and Xinjiang Museum in China, Marcel Erdal (France), Mehmet Olmez (Turkey)

2c. If YES, available relevant documents

3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included?

Turkologists and other scholars.

4a. The context of use for the proposed characters (type of use; common or rare)

Rare; historical use.

4b. Reference

5a. Are the proposed characters in current use by the user community?

Yes.

5b. If YES, where?

Scholarly and popular publications.

6a. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP?

No.

6b. If YES, is a rationale provided?

6c. If YES, reference

7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?

Yes.

8a. Can any of the proposed characters be considered a presentation form of an existing character or character sequence?

No.

8b. If YES, is a rationale for its inclusion provided?

8c. If YES, reference

9a. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters?

No.

9b. If YES, is a rationale for its inclusion provided?

9c. If YES, reference

10a. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character?

No.

10b. If YES, is a rationale for its inclusion provided?

10c. If YES, reference

11a. Does the proposal include use of combining characters and/or use of composite sequences (see clauses 4.12 and 4.14 in ISO/IEC 10646-1: 2000)?

No.

11b. If YES, is a rationale for such use provided?

11c. If YES, reference

11d. Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?

No.

11e. If YES, reference

12a. Does the proposal contain characters with any special properties such as control function or similar semantics?

No.

12b. If YES, describe in detail (include attachment if necessary)

13a. Does the proposal contain any Ideographic compatibility character(s)?

No.

13b. If YES, is the equivalent corresponding unified ideographic character(s) identified?
