Doc Type: Working Group Document**Title: Mapping between Old Hungarian proposals in N3531, N3527, and N3526****Source: Michael Everson****Status: Individual Contribution****Action: For consideration by JTC1/SC2/WG2 and UTC****Date: 2008-11-02**

This document compares the repertoire in N3531 (written by the present author and André Szabolcs Szelp) with the repertoire in N3527 written by Gábor Hosszú, and with the repertoire in N3526 written by Gábor Bakonyi. Character names from N3531 are given in Roman type; character names from N3527 are given in *italic type*; character names from N3526 are given in an *italic sans-serif font*. N3526 does not give code positions but we have assigned the positions xx00..xx36 to the characters in the table on pages 12–14 of that document.

Only *one* character in N3527 has no mapping to the character set proposed in N3531, namely its 1AB5 Ÿ SZEKLER-HUNGARIAN NUMERAL FIVE HUNDRED. Of this, N3527 has this to say: “Earlier the Rovas researcher Atilla Koricsánszky stated in his book that the character of the FIVE HUNDRED had to exist, however there are not known any historical relic of this [92]. In 2008 Tamás Rumi derived a glyph Ÿ from the other Rovas numerals that was accepted by the Committee of the Community of the Szekler-Hungarian Rovas Writers in its meeting in August 28th, 2008, Budapest [93].” I do not believe that there are grounds to encode this particular unattested character. (As a matter of authenticity, it can be noted that the Ÿ glyph bears the *only* true horizontal stroke in the repertoire.)
