Propose to change some Character form Myanmar Unicode 5.1

Some characters present in Myanmar Unicode 5.1 are not use in myanmar language now.The old Pali and Sanskrit characters already disappear in modern myanmar language since 50 years ago. Now modern Pali (Pali language use by monk) letter can be present with myanmar modern characters. In this character map, 1023 and 1039 are special present for Pali language .

Shan,Mon,Karen and Palaung characters should be present after Myanmar Language complete. These language are do not use use in Myanmar. Shan language only use by elder shan people in small villages in shan state. they use Shan script when they celebrate traditional fair or wedding ceremony. It is less than 0.1% for our country. Now shan children don't know about these language and all they learn Myanmar language only . Mon , Karen and Palaung are less then shan population. We don't mind these other languages for our country use. We only need to present all essential script to complete myanmar language for Myanmar Unicode Character Map. In this proposal ,we only need 1000 to 104F address for our character map.

In Myanmar Unicode 5.1, following characters should be change.

1008   can be present with 1005+103B
1029 can be present with 103C+101E
102A can be present with 1031+103C+101E+102C+103A
1026 can be present with 1025+102E
1022 ,1028,1033,1034,1035,1039,104E are not myanmar characters and need to change.

These words are common use in Myanmar language . it is impossible to complete myanmar script without these characters. Myanmar Unicode 5.1 is missing some essential characters for our language and some characters are unusable for our modern Myanmar script . So I want to propose some characters to change from the Myanmar Unicode 5.1. Some consonant and vowel has more than one shape.But these shapes also essential and need to address as characters .
