

Title: Change Proposal for Informative Alias of U+3164 HANGUL FILLER

Date: Feb. 26, 2009

Source: Ienup Sung <is@sun.com>**1. Problem Statement & Background**

The code chart for the Hangul Compatibility Jamo block at U+3130-U+318F has the following for U+3164 HANGUL FILLER showing “cae om” as an informative alias:

Special character

3164  HANGUL FILLER
= cae om
≈ 1160  hangul jungseong filler

The above is for Hangul Filler (i.e., 채움 in Korean) character (at row 4 and column 52) as shown in an edition of the original KS C 5601 (currently known as KS X 1001) code chart:

“	’	!	*	/	
R	S	T	U	V	
~		(채움)	u	uc	
Σ	T	γ	∅	X	

The “cae om” shown in the Unicode code chart as an informative alias for U+3164 is not a correct Hangul Romanization in any known standards or rules; and it causes confusion on the alias itself.

As a background info, the corresponding Unicode 1.0 code chart has:

Special character
3164  **HANGUL CAE OM**
= *FILL*

2. Proposed Change

Following widely accepted Hangul Romanization rules and standards, I'd like to propose to change the informative alias for U+3164 HANGUL FILLER from:

= cae om

to:

= chae um

or, if the above is not acceptable, then, alternatively, to:

= hangul cae om (1.0)

· the above “cae om” is a mis-romanization of hangul “chae um”

END_OF_MEMO.
