Doc Type: Working Group Document

Title: Revised Proposal to encode characters for the English Phonotypic Alphabet (EPA) in the UCS

Source: German NB Author: Karl Pentzlin

Status: National Body Contribution

Action: For consideration by JTC1/SC2/WG2 and UTC

Date: 2011-01-18

Replaces: L2/10-229R, L2/10-403

Major changes compared with L2/10-229R (submitted to the UTC 2010-08-04):

- The section 2.3 "Casing issues" is completely rewritten (based on the UTC feedback on Rev. 1).
- The formal case pairing reflected in the character properties was rearranged considering the naming and the shape of the characters, rather than the special use in any EPA variant.
- Variation sequences are no longer proposed.
- In consequence of this, some characters were renamed, and the whole set was rearranged.
- Three lower case forms from other sources were added, to accomplish the case pairing in the light of the valid stability policies (see the detailed explanations in the new section 2.3).
- It is proposed to group capital letters without lowercase counterparts together, employing the otherwise unusable area in the "Alphabetic Presentation Forms" block.
- One punctuation mark was added (an "inverted wiggly exclamation mark" was found in the sources).
- In section 2.5 "Special issues on single characters", paragraphs were added for characters where questions were raised in the UTC feedback.
- The code positions of the punctuation marks were shifted to prevent overlapping with other proposals.
- Proposed annotations regarding the special casing in the major EPA variants were dropped.
- The tables for these special casings are enumerated in a new informative section (3.7).
- Sections on confusability issues and punctuation mark properties were added (3.6, 3.4).

Changes compared with L2/10-403 (submitted to the UTC 2010-10-24):

- As an important example of use, the "American Phonetic Dictionary of the English Language (Cincinnati 1855)" is referenced (see fig. 1855c–1855e).
- Lowercase letters which were not attested are dropped.
- Three characters were added for which additional evidence was found.
- The letter "ow" is no longer proposed to be unified with Pullum & Ladusaw's "baby gamma".
- The letters are rearranged according to their default collation (without referencing special EPA collations).

1. Introduction

The English Phonotypic Alphabet is one attempt to give the English language a phonetic spelling and an alphabet which accomplishes this in a way that every sound is represented by a single letter (the words "phonetic" and "sound" translate in today's language roughly as "phonemic" and "phoneme"). The English language has experienced many of such experiments; e.g. William Bullokar's "Booke at Large" (London 1580), or Unifon (1957, http://www.unifon.org). Some prominent examples, having their alphabets encoded in Unicode, are Deseret and Shavian.

The "English Phonotypic Alphabet", shortly referenced in the following as "EPA", stands out of these numerous experiments by these facts:

- It was propagated for more than 40 years, at least from 1847 to 1888.
- It was used in one of the earliest systematic phonetic dictionaries of the English language (see fig. 1855c–1855e).
- Besides that, there were several other thousands of pages of text published using it.

- It is closely related to the widely used Pitman Shorthand (being based on the same phonemes, as its inventor was also one of the main contributors and propagators of EPA).
- It played a role in the history of IPA.

The EPA is an extension of the Latin alphabet, including some special punctuation marks. It also assigns special meanings of existing Latin characters and punctuation marks when used in its domain.

It was developed by Isaac Pitman (who also developed the Pitman shorthand) and Alexander Ellis in England since 1844; the first stable version was published 1847.

The term "phonotypic" was coined to distinguish the project from "phonographic" which then was used for the shorthand, referring to its design for lead *types* (while the other was designed for "graphics" done by hand). While the "English phonotypic alphabet" was called later "English phonetic alphabet" by its propagators, the original wording seems more appropriate now to name the alphabet, as the alphabet is not "phonetic" in the sense this term is used today.

Besides some hobbyist usage, texts published in the EPA are referenced and cited in discussions of details of English pronunciation of the 19th century (see especially fig. 1855c-1855e; see also fig. 1996b for a modern bibliographic reference using EPA in the naming of the cited work).

While EPA is (as outlined above) not phonetic in the modern sense, nevertheless the texts (which include self-referencing discussion texts) give hints for such pronunciation details.

Four main stages can be identified, by considerably different use of some single characters (however, the special punctuation marks devised for EPA were used unchanged throughout all EPA versions, see fig. 1848a, 1848e, 1848f).

1.1 EPA 1847

The 1847 version of EPA (shortly referenced as "EPA 1847" in the following; see fig. 1847a) contained 40 letters, distinguishing between long and short vowels, but does not address the sound differences for stressed and unstressed syllables (thus, e.g. it ignores the schwa as an English phoneme). In this, it matches the Deseret alphabet, which was developed at the same time and possibly was in fact modeled according to the EPA 1847 version.

Together with the publishing of EPA 1847, some additional letters and many diacritical combinations were devised to write other languages than English (see fig. 1848a, 1848c).

1.2 EPA 1855 (the "Cincinnati alphabet")

The EPA was adopted in the USA by a group of promoters mainly situated in Cincinnati, who in first line adopted the EPA 1847, but in 1855 published the "Cincinnati alphabet" (referenced as "EPA 1855" in the following, see fig. 1855a), which retained the consonants and diphtongs (except a glyph change for the "th" sound) but has revised the vocals, resulting in a total of 43 letters. This alphabet was in use at least until 1864 (see fig. 1864b).

1.3 EPA 1856

Independent of the USA use, in England from 1852 on, Isaac Pitman tried to "improve" the EPA (see fig. 1852a) and started to publish several short-lived new versions. From 1856 on, a reduced version was used ("EPA 1856"; see fig. 1856c, 1860a) which lacked the diphthongs and characters for the compound consonants [tj] and [dʒ].

1.4 EPA 1868

However, from 1868 on, a version ("EPA 1868"; see fig, 1868a, 1871a) was used which had restored most of the diphthongs and the consonant inventory from earlier versions (with the exception of replacing "c" by "k"). In 1888, the diphthongs are dropped again (see fig. 1888a).

2. Encoding considerations

2.1 Scope of this proposal

The proposal intends to include all EPA variants which were stable for at least some years, and which were used for publications beyond publishing the alphabet version itself.

These are the aforementioned versions "EPA 1847", "EPA 1855", "EPA 1856", and "EPA 1868". Not included are therefore:

- any experimental versions. These include the alphabets published by Pitman/Ellis before the final 1847 versions, and the "improvements" published by Isaac Pitman from 1852 on before there was stability again (the EPA 1856).
- any characters found only in discussions of the character forms themselves (a lot of such are found in the "Plowshare", see fig. 1853a; see also fig. 1852c).
- any competing alphabets from the same era (one of the more remarkable ones is the Comstock alphabet, see fig. 1855f).

However, such characters can be in principle subject of later proposals.

As an exception, such versions were used as source for lowercase counterparts of capital EPA characters, whenever elsewhere no lowercase form was found which fulfills the requirement for being a formal lowercase counterpart (see "casing issues" below; see fig. 1852b, 1852e, 1855f, and [using a completely different source] 2008a).

2.2 Character identity

During the history of EPA, some of the glyphs developed for the EPA as well as some standard Latin characters were used to denote different sounds/phonemes.

On the other hand, the used glyphs show a high grade of stability during their use in any EPA versions (compare fig. 1847a, 1855a, 1860a, 1868a, 1871a, 1888a).

This includes the italic forms which were deliberately designed, not simply being skewed forms of the Roman ones (see e.g. fig. 1888b for the lowercase a, i, and o forms).

Therefore, the character identities were devised by their glyphic appearance, rather than by the sounds/phonemes they denote. This is in accordance with the general encoding principle of Latin letters (e.g. the W/w is U+0057/0077 whether it denotes [w] in English, [v] in German, or [u] in Welsh).

This is done consequently. Therefore, the three different forms given for the lowercase th $[\theta]$ (the only phoneme addressed by different forms throughout the EPA history not resulting from an exchange of otherwise used glyphs) are encoded as different characters also.

To enable the exact reproduction of EPA texts by good typography, unifications with existing letters are selected with care. The principle is followed that EPA shall be displayable using multipurpose fonts, never needing to select a special EPA font only to get a recognizable high-quality representation of EPA texts.

2.3 Casing issues

A special phenomenon of EPA is that the combination of upper and lowercase letters is peculiar in EPA, and changes between the different EPA stages.

Especially in EPA 1847, the standard letter A and the already encoded small latin alpha are involved in this:

- the uppercase A is paired with the lowercase Latin alpha;
- the lowercase a is paired with the uppercase "roundtop A" (included in this proposal).

Therefore, the "canonical" casing mechanism of Unicode, defining a fixed casing counterpart in the character properties, cannot be employed in full on EPA text.

It would be possible to solve this by defining special casing rules in the Unicode data file "special-casing.txt", as it is done for Turkish to accomplish the casing I/ı İ/i). However, the UTC gave some rules in the feedback to the first version of this proposal, which are followed in this revision.

- A formal case pairing in the character properties is only given if the form (of the representative glyph) and the naming of the capital and small letter correspond. (Of course, no naming correspondence is proposed here whenever there is no form correspondence.)
- ▶ If such a pairing is found, this has precedence over an actual case pairing found in a specific historical use, like EPA or only a specific variant of EPA.
- ▶ The actual case pairing in such a use has to be described elsewhere (e.g. in initiating a specific CLDR entry), and has to be accomplished by other means (like regarding such a CLDR entry).

Another fact to be regarded is a consequence of the current Unicode stability policies:

Whenever a capital letter is encoded, a lowercase counterpart (by "canonical" casing reflected in the Unicode character properties) cannot be encoded later. (This does not apply vice versa: for a lowercase letter, a capital counterpart in fact can be encoded later.)

Based on this, the following rules were incorporated:

- Whenever a capital and a lowercase letter are found which match by form, they are proposed as "canonical" case pair, without regarding the actual use in any EPA variant.
- Whenever a lowercase letter is found without a capital letter matching by form, this letter is proposed as an unpaired lowercase letter.
- Whenever a capital letter is found without a lowercase letter matching by form in EPA, the following is done:
 - If an appropriate matching lowercase letter was found in an area otherwise not in the scope of this proposal, that letter is included, and the complete "canonical" case pair is proposed.

This is the case for:

- U+A7AC/A7AD LATIN CAPITAL/SMALL LETTER A WITH LOOP U+A7B5/A7B6 LATIN CAPITAL/SMALL LETTER I WITH LONG STROKE OVERLAY U+A7C7/A7C8 LATIN CAPITAL/SMALL LETTER U WITH INSIDE BAR
- Otherwise, if there exists an already encoded letter which is obviously the matching lowercase letter, but which is already formally paired to another uppercase letter, that letter is formally declared formally as the lowercase part of the capital letter proposed

here (while the uppercase matching of that letter is not changed).

This yields in a missing possibility of round-trip casing for the capital letter proposed here. (This casing behavior resembles the one U+1E9E LATIN CAPITAL LETTER SHARP S.)

This is the case for:

U+FB0B LATIN CAPITAL LETTER PHONOTYPIC ENG (paired with U+014B LATIN SMALL LETTER ENG)
U+FB0F LATIN CAPITAL LETTER DOUBLE U (paired with U+026F LATIN SMALL LETTER TURNED M)

Otherwise, if there is no form of a lowercase letter which is obviously matching by form (and thus being its "natural" lowercase matching independent of any use in a special EPA variant), the capital letter is proposed unpaired.
 In such cases, the case matching has to be done by a tailoring specific to the EPA variant in use (which is no special problem, as any EPA variant considered here needs such a tailoring anyway).
 These capital letters will never get a lowercase counterpart (due to the aforemention-

special tailoring, they are excluded from the use in IDNs and identifiers.

The last two groups of capital letters are "second class letters" in some sense, as they are no "canonical" capital counterpart of any encoded lowercase letter.

Therefore, it is considered appropriate to put these letters into a specific group. In fact,

ed Unicode stability policies), and as they cannot be lowercased independent of a

Therefore, it is considered appropriate to put these letters into a specific group. In fact, they are proposed to be placed in the "Alphabetic Presentation Forms" block. As true presentation forms (like U+FB06 LATIN SMALL LIGATURE ST) will no longer be encoded, the gaps in this block are considered to be the appropriate place for other "second class" letters now.

A list of the case pairings deviating from the "canonical" pairings is given in an
informative chapter ("3.6 Special case pairing within the main EPA versions" below),
which can be used as an appropriate data source when it comes to define the special
casing tailoring for EPA variants elsewhere.

2.4 Duodecimal numbering

During some years about 1860, Isaac Pitman has propagated the duodecimal system along with EPA. As some publications are found using this system (see fig. 1860f, 1860g), the special digit forms used there for the digit values ten and eleven are included in this proposal.

2.5 Special issues for single characters

- A typical feature for some lowercase EPA letters is the "u-turned tail", which always displays a 180° bend upward, of about half the length of the tail (see the proposed U+A7AB, U+A7B1, U+A7C9 LATIN SMALL LETTER A/ALPHA/U WITH U-TURNED TAIL, and the italic form of U+A7B8 LATIN SMALL LETTER I WITH SPIRAL TAIL; see fig. 1888b). These tails are straight prolongations of the right stem of the letter replacing the usual bend or serif at the bottom line, thus differing from an appended ogonek or retroflex hook, or the hook tail of U+024B LATIN SMALL LETTER Q WITH HOOK TAIL.
- A similar feature is seen with U+A7B9/A7BA LATIN CAPITAL/SMALL LETTER I WITH RIGHT U-TURN AT BOTTOM, which therefore are not unified with the Latin iota (which usually has a bend of only 90° ... 120°, ending in a sharp peak rather than a ball terminal).

The U-turn of the proposed letters may be even more prominent than that of a J/j in the same font (see fig. 1852a, middle part). Therefore, they are not called REVERSED J.

 U+A7C2/A7C3 LATIN CAPITAL/SMALL LETTER OW: Its appearing is equidistant to that of the following similar letters:

U+0264 RAMS HORN: Normal height; arms bend about 90° outwards (see fig. 1996a). Proposed OW: Normal height; arms are straight, belly is broad. U+0194/0263 LATIN GAMMA: Extended height; arms are straight, belly is narrow. U+0222/0223 LATIN OU: Normal height; arms bend about 90° inwards, almost touching.

Thus, no one of the three other letters exploits a preference to be unified with the "OW" proposed here. Each of them would be look equally wrong when used in EPA (especially, the Capital Latin Gamma would look weird, as no EPA capital letter extends below the baseline; even the Q is not used in any EPA variant).

The differences between the listed letters anyway are more prominent than e.g. between U+0075 u, U+1D1C u, U+028B v, U+0076 v, U+2C71 v.

Thus, any unification of the proposed "OW" is considered inappropriate.

Also, as the most prominent part if the "OW" is the O-like "broad belly", it is not proposed as the (not yet encoded) Pullum & Ladusaw's "baby gamma", which has a shape like a "v with a little loop at the peak" (see fig. 1996a).

- U+2E4F PHONOTYPIC QUESTION MARK has a specific design, which in no case is a
 mirror image of the ordinary question mark (see fig. 1848e, 1853a, 1855a, 1864b).
 Therefore, and as its function differs from the reversed question mark in any case, it was
 given its own code point.
- U+218B TURNED EZH-SHAPED DIGIT THREE (duodecimal digit eleven in Pitman's notation) is no simple turned digit three, as fig. 1860f, 1860g clearly show. Therefore, a unification with 0190 LATIN CAPITAL LETTER OPEN E or A72B LATIN SMALL LETTER TRESILLO would be far more inappropriate, as an unification of the tresillo with the open E would have been. It can be presumed that Pitman wanted the digit to be clearly distinguishable from the capital open E which is a common letter in EPA.

(In fact, other propagators of non-decimal numbering systems used a simple turned three, but then, this is another character, the unifiability of which has to be discussed in due course when those digit sets are proposed for encoding.)

3. Proposed characters

Annotations in parentheses address special issues for a character, or reference to figures where such special issues are discussed. These annotations are not intended to be retained in the character listings in the standard.

All letters (except when noted) are found in at least one of the figures:

EPA 1847 – fig. 1847a

EPA 1855 - fig. 1855a

EPA 1856 - fig. 1856c

EPA 1868 – fig. 1868a

The italic forms for some letters are found in fig. 1888a.

Block: Latin Extended-D

Additions for the English Phonotypic Alphabet

a	U+A7AB	LATIN SMALL LETTER A WITH U-TURNED TAIL → 1D8F latin small letter a with retroflex hook
A	U+A7AC	LATIN CAPITAL LETTER A WITH LOOP
a	U+A7AD	LATIN SMALL LETTER A WITH LOOP (see fig. 1855f)
A	U+A7AE	LATIN CAPITAL LETTER ROUNDTOP A
a	U+A7AF	LATIN SMALL LETTER ROUNDTOP A the italic form may resemble an unreversed Latin alpha with left notch
а	U+A7B0	LATIN SMALL LETTER ALPHA WITH INSIDE BAR (see fig. 1848a, 1848h, 1848i, 1849a)
q	U+A7B1	LATIN SMALL LETTER ALPHA WITH U-TURNED TAIL → 024B latin small letter q with hook tail → 1D90 latin small letter alpha with retroflex hook
a	U+A7B2	LATIN CAPITAL LETTER ALPHA WITH LEFT NOTCH = latin ligature of capital open e and i
а	U+A7B3	LATIN SMALL LETTER ALPHA WITH LEFT NOTCH
đ	U+A7B4	LATIN SMALL LETTER PHONOTYPIC DH
Φ	U+A7B5	LATIN CAPITAL LETTER I WITH LONG STROKE OVERLAY
		= latin capital letter i with serifed crossbar → 0197 latin capital letter i with stroke → 2629 cross of jerusalem → 2720 maltese cross (see fig. 1848b)
i	U+A7B6	LATIN SMALL LETTER I WITH LONG STROKE OVERLAY (see fig. 2008a)
i	U+A7B7	LATIN SMALL LETTER I WITH PIGTAIL AT BOTTOM · the italic form usually shows the pigtail at bottom to the right → 0279 latin small letter turned r (see fig. 1848c, 1873a, 1880a)
į	U+A7B8	LATIN SMALL LETTER I WITH SPIRAL TAIL the italic form usually has a u-turned tail
L	U+A7B9	LATIN CAPITAL LETTER I WITH RIGHT U-TURN AT BOTTOM → 0196 latin capital letter iota
i	U+A7BA	LATIN SMALL LETTER I WITH RIGHT U-TURN AT BOTTOM (see fig. 1851c, 1852a, 1852b)

Q	U+A7BB	LATIN CAPITAL LETTER O WITH CURL the italic form usually has the curl directed to the left (see fig. 1888b)
Q	U+A7BC	LATIN SMALL LETTER O WITH CURL
Θ	U+A7BD	LATIN CAPITAL LETTER CLOSED OMEGA · lowercase is 0277 latin small letter closed omega
Ω	U+A7BE	LATIN CAPITAL LETTER CLOSED OMEGA WITH LONG STEM
$\boldsymbol{\omega}$	U+A7BF	LATIN SMALL LETTER CLOSED OMEGA WITH LONG STEM
ധ	U+A7C0	LATIN CAPITAL LETTER TURNED CLOSED OMEGA (see fig. 1848d, 1848i, 1849b)
o	U+A7C1	LATIN SMALL LETTER TURNED CLOSED OMEGA (see fig. 1848a, 1848d, 1848h, 1848i, 1849b)
8	U+A7C2	LATIN CAPITAL LETTER OW · in the English Phonotypic Alphabet, it usually denotes the diphthong [au] → 0194 latin capital letter gamma → 0222 latin capital letter ou → A64A cyrillic capital letter monograph uk
8	U+A7C3	LATIN SMALL LETTER OW · this is not Pullum & Ladusaw's "baby gamma" → 0263 latin small letter gamma → 0264 latin small letter rams horn (see fig. 1996a)
t	U+A7C4	LATIN SMALL LETTER PHONOTYPIC TH FIRST FORM
$\hat{\mathbf{t}}$	U+A7C5	LATIN SMALL LETTER PHONOTYPIC TH SECOND FORM

3.3 Properties to be changed for already encoded characters

0277; LATIN SMALL LETTER CLOSED OMEGA; L1;0; L;;;; N;;; A7BD;; A7BD

3.4 Line breaking and text delimitation properties of punctuation marks

U+2E4F PHONOTYPIC QUESTION MARK behaves like:

U+00BF INVERTED QUESTION MARK, as it introduces questions (rather than terminating them).

U+2E50 WIGGLY EXCLAMATION MARK and

U+2E51 INVERTED WIGGLY EXCLAMATION MARK both behave like:

U+0021 EXCLAMATION MARK, as both terminate sentences (U+2E51 is not an "Spanish counterpart" of U+2E50; both are terminating sentences, exploiting different meanings.)

U+2E52 LEFT PARENTHESIS WITH MIDDLE RING and

U+2E53 RIGHT PARENTHESIS WITH MIDDLE RING behave like other recently encoded parenthesis pairs (like e.g. U+2E28/U+2E29 LEFT/RIGHT DOUBLE PARENTHESIS).

3.5 Collation and sorting

As the different versions of EPA specify differing "systematical" alphabet orders, in any case strongly deviating from the standard Latin ABC... order, these have to be handled by special tailoring.

Thus, for for default collation and sorting, the characters are to be treated in the common way for Latin characters, without special exceptions.

3.6 Confusability issues

The following confusables exist:

(The first line of each paragraph shows a proposed letter, followed by lines containing similar already encoded letters.)

```
A7BF LATIN SMALL LETTER CLOSED OMEGA WITH LONG STEM
0277 LATIN SMALL LETTER CLOSED OMEGA
A7AD LATIN SMALL LETTER A WITH LOOP
0061 LATIN SMALL LETTER A
A7B1 LATIN SMALL LETTER ALPHA WITH U-TURNED TAIL
024B LATIN SMALL LETTER Q WITH HOOK TAIL
A7B4 LATIN SMALL LETTER PHONOTYPIC DH
0111 LATIN SMALL LETTER D WITH STROKE
A7B3 LATIN SMALL LETTER ALPHA WITH LEFT NOTCH
0061 LATIN SMALL LETTER A
A7BA LATIN SMALL LETTER I WITH RIGHT U-TURN AT BOTTOM
0269 LATIN SMALL LETTER IOTA
A7C8 LATIN SMALL LETTER U WITH INSIDE BAR
0289 LATIN SMALL LETTER U BAR
A7CB LATIN SMALL LETTER U WITH NOTCH AT BOTTOM
026F LATIN SMALL LETTER TURNED M
A7C3 LATIN SMALL LETTER OW
0223 LATIN SMALL LETTER OU
0263 LATIN SMALL LETTER GAMMA
0264 LATIN SMALL LETTER RAMS HORN
```

The proposed capital letters without lowercase counterparts, placed in the "Alphanumeric Presentation form" block, are explicitly not intended for use in identifiers and IDNs. Therefore, they cannot raise any confusability issues.

3.7 Special case pairing within the main EPA versions

This part is informative, regarding to this proposal.

If it is decided to include such data into the CLDR or to document them elsewhere, these tables can be used as data source.

4. Acknowledgements

Special thanks for Google and Microsoft for providing scans of numerous 19th century books and publications accessible on the Internet. Without access to these sources, this proposal could not have been made within considerable time.

In fact, only fig. 1880a and fig. 1888a/b/c were made from original paper material. All other figures are excerpts from scans found by Internet search.

Special thanks also to Andreas Stötzner (http://www.signographie.de/cms/front_content.php?idcat=1) for his insightful comments regarding typographical questions, and for drawing the glyphs for the characters proposed here.

5. Examples and figures

The figures are numbered by the year of the publication of the book from where the scan is taken, following by a letter.

Remarkable occurrences of characters mentioned in the figure descriptions are marked by a colored circle.

Disclaimer:

The religious, philosophical, or ideological views expressed in some of the text specimens are not necessarily the ones of the author of this proposal.

Fig. 1847a: The Gospel according to Matthew, in Phonotypy and Heterotypy. Interlinear Edition; London/Bath, 1847; p.4, showing the EPA 1847.

The sign (') is prefixed to l, m, n, to shew when they form syllables by themselves; as, dub'l, dublin; rit'm, ritmic; $\varepsilon v'n$, $\varepsilon vnin$; and the compound symbols 'l, 'm, 'n, are then called "vocals."

Additional Symbols are used for foreign sounds, as may be seen by the following examples. See p. 21.

German.—cünste, cunste, Göte, boce, ik, ak, zeq, taq, dan kühnste, künste, Goethe, böcke, ich, ach, sieg, tag, wann

New Orthographical Signs:—(9) query, placed at the commencement of interrogative clauses; (1) sigh; (3) smile; (4) obsolescent parentheses, used to inclose words which are not spelt phonetically. See pp. 24, 25.

Fig. 1848b: ibid., excerpt from p.10.

This shows an earlier development stage of the EPA 1847. This stage is not subject of this proposal. However, it proves that the U+A7B5 LATIN CAPITAL LETTER PHONOTYPIC I was considered different from U+0197 LATIN CAPITAL I WITH STROKE, as these letters are both included in that draft as different letters (see circle markings).

5. Ogust, 1844.

P B, T D, E J, C G; F V, T
$$\Delta$$
, S Z, Σ Z; L, R; M, N, μ , =p b, t d, g j, c g; f v, t d, s z, f z; l, r; m, n, y, ov 1847.

dis woz avzedli onli a temporeri alfabet.

Fig. 1848c: ibid., excerpt from p.10.

This shows another earlier development stage of the EPA 1847. This stage also is not subject of this proposal. However, it shows U+A7B7 LATIN SMALL LETTER I WITH PIGTAIL AT BOTTOM together with an uppercase form which is not included in later stages of the EPA development (and therefore not proposed here). This form, together with the asymmetric serif at the top below the dot of U+A7B7 itself, which is typical for the small letter i, proves that that an unification of that letter with 0279 0307 "small letter turned r with dot above" would be inappropriate.

7. October, 1844.

Ais iz de ferst "loer-cas" er smel-leter alfabet, and it wil be sen dat de consonants wer no priti wel set'ld. Priur tu de adopsun ov dis alfabet,

Fig. 1848d: ibid., excerpt from p.21.

1

2

Part of the list of additional symbols for foreign sounds.

Mostly, diacritical marks are used which are already encoded. For the right dot on small u and o (No. 15 and 16), U+0358 COMBINING DOT ABOVE RIGHT seems appropriate. No. 14 (marked red) shows the letter pair U+A7C0/A7C1 LATIN CAPITAL/SMALL LETTER TURNED CLOSED OMEGA, which is not listed in the alphabet shown in fig. 1848a.

AE FONETIC JURNAL.

21

§ 8. II. ADIΣUNAL SIMBULZ FOR FOREN SUNDZ.

- 'I î Te Polif y; it iz de proper lon vvel ov Inglif 7.
- "A ä Az Jerman ä, Freng é; de proper sond ov Inglif 22.
- 3 A ā Ae Frij a, az distingwijt from eder a er s; it iz de trau lon vvel ov Inglij 9.
- 4 A & Frenç a; muc breder dan Inglis 3, but not so bred az Inglis 4.
- 5 Oô Italian o apárto; not cwit so bred az Inglif 4, but breder dan â.
- 6 ,O 9 Italian o cýzo; betwen Inglif 5 and 6, but inclind tur de later.
- 7 "U ü Lon Jerman ü, Freng u; fermd bi an atemt tu pronsns Inglif 1 and 6 simultaniusli. Inglifmen hu can not cag de sund, ma substitut ų in Freng, and ε in Jerman wurdz.
- 8 "O ö Lon Jerman ö, Freng ed; fermd bi atemtin tun pronyns Inglif 2 and 5 simultaniusli. Inglifmen hun can not cag de synd, ma substitut ë.
- 9 E ë Freng e müü (muet); jenerali a bref vsel. Ae Inglif 9 bref haz veri nerli de sam sond. Sum Fonetifanz consider dat Inglif 36³ and 36⁴ wud be mor corectli rit'n ër.
- 10 I i de Freng stopt i; a mug briter synd can de Inglif 7. Inglifmen, hwen specip Freng, jenerali uz "e" er "i" insted ov i. We hav herd it pronynst in de wurd (been)—"bin," insted ov "ben."
- 12 A a Stopt a in el Foren langwejez, hwar it replasez zr Inglif 9. Az sznd liz betwen Inglif 9 and 10, and aprocez de later veri nerli. It iz herd in de nert ov Ingland and Scotland in plas ov Inglif 9. It iz elso veri nerli de sznd hwig meni Inglif specerz giv tu de Inglif 3², tu avod a gans ov pronzusin "å" er "ar" fer q.
- 13 O o Stopt Italian o apárto; scarsli distingwisab'l from Inglis 10.
- 14 O o de tru sert vsel ov Inglis 5, az in Frenç (bonne)="bon." It iz stil herd in America, hwar (stone)="ston;" but it iz elwaz replast in Ingland bi "o" er "u," dus "a ston, tre stun wat."
- 15 'U ù Stopt Jerman ü, Freng u, dus (künste, hutte) = "cunste, hut."
- 16 'O o Stopt Jerman "ö," Freng eu, dus (böcke, jeune)="boce, zon."
- 17 O o de Oriéntal compresun, az "ogin."
- 18 X x de Oriéntal glef-hamza, er soft bredig.
- 19 'V t de Jerman w, intermediet tu de Inglis "w" and Inglis "v;" de loer lip duz not tug de tet az fer "v," but presez de uper lip mor flatli dan fer "w."
- 20 K k As Jerman ch, after paletal vselz or liewidz, cus (ich)—"ik;" hwen printed in italies, it reprezents de hars sond ov Jerman ch, herd after el ucer vselz, az (auch, ach)—"auk, ak. Inglismen hu can not cag de sond, ma uz de hwisperd y for "k," and c for k.
- 21 Q q Az Jerman g final after paletal vselz, dus (sieg)="zeq," or mor acuretli="szeqk," and veri freewentli="szek" onli; hwen printed in italics, it haz de harfer sond ov de Dug g and de final Jerman g after uder vselz, az (tag)="tag." Inglismen hun can not cag de sond, ma uz "y" for "q," and "g" for "q."

2. Ogzílyeri Sinz.

- [Tu prevent de nesesiti ov castin a number ov nu tjpz, a fu ogzilyeri sinz ar emplod, tu modifi de non valuz ov de leterz tu hwig da ar subjond or preficst.]
- 22 n Sin ov nazáliti. Hwen jond tun eni vvel, it soz dat it must be spoc'n

Fig. 1848e: ibid., excerpt from p.24.

Showing the "Expressional Signs" (i.e. punctuation marks).

Note that No. 11 ("the Query", red) is not a mirror image of No. 12 (it is narrower, and the kink at the vertical stem is about 135°, while the kink at No. 12 ("the Doubt", obviously a reuse of U+003F QUESTION MARK) is below 90°. Therefore, No. 11 is proposed as U+2E4F PHONOTYPIC QUESTION MARK, instead of being unified with U+2E2E REVERSED QUESTION MARK (whose representative glyph is even smoother than the No. 12 form).

No. 13 ("Call") and 14 ("Sigh") obviously are the exclamation marks U+0021 and U+00A1. No. 14 ("Smile", green) shows U+2E50 WIGGLY EXCLAMATION MARK (in a bad type).

3. ECSPREZUNAL SANZ.

- 11 (9) As Cweri. As iz plast befor eni wurdz er clezez bi hwig a cwesgun iz asct.
- 12 (?) He Det. His iz plast after eni wurd er statment, consernin hwig de riter felz sum det, er hwig he wisez tu cel in cwesgun. Obzerv de diferens betwen de detful incwiri "U cam last nit?" and de uzual interogasun "I Did u cum last nit."
- 13 (!) He Col; a marc ov ecsclamajun, or simpli surpriz. Dub'ld (!!), it indicats grat astonijment.
- 14 (i) He Si; a marc ov gref er soro: plast after a statment hwig givz de riter pan. Dub'ld (ii), it indicats grat afliciun.
- de Smil; a marc ov mert er plezur: plast after a statment hwig givz de riter plezur, or produsez in him a felip ov amuzment; and hens uzd in plas ov dat ecsprejun in de specer hwig in comun intercors iz ment tu indicat "į woz onli in joc." de dub'l smil (!!) iz a denrit laf.
 - Ol dez sinz ar uzd tu indicat de felin ov de riter er specer: da hav no referens tu de reder, hu iz cwit at liberti tu si over a smil, er smil over a si.

Fig. 1848f: ibid., excerpt from p.25.

Showing the "Obsolescent Parentheses" as No. 19 (U+2E52 LEFT PARENTHESIS WITH MIDDLE RING and its right counterpart).

HE FONETIC JURNAL. 25

4. PARENTETICAL SANZ.

- 16 () He Paréntesis, or in de plural Paréntesez; yzd twi incloz eui wurd or cloz hwig iz inserted in de bodi ov a sentens, wich huz gramatical construcsun it sumhwot interferz. It iz olso yzd twi incloz eni lit'l marcs or sinz hwig mit uderwiz be overluet, or not hav sufisent importans giv'n twi dem bij de reder. For instans, we hav for dis rez'n, inclozed de ortografical sinz 1 twi 15 in de marjin ov de abuv ecsplanasunz betwen parentesez.
- 18 [] Bracets; uzd az a variaĵun ov parentesis, and elso tu incloz hol sentensez hwig interfér wid de jeneral aranjment ov a paragraf, and consecwentli hav rader de aperans ov nots. Obzervaĵunz mad bi de siter, in de cors ov a sitaĵun, ar jenerali so inclozd, tu distingwij dem from de wurdz ov de etur sited.
- 19 () Obsolésent Parentesez; uzd tu incloz wurdz hwig ar not egzibited Foneticali.
- 20 ("") Invérted Comaz er Marcs ov Sitefun, incloz wurdz ewated from anuder etur, er put intu de met ov de specer. Wurdz tu hwig particuler importens iz atagt, tecnical ecsprefunz, ets., ar of'n so inclozd.

Fig. 1848g: ibid., excerpt from p.122.

Showing some of the special punctuation marks (in red circles). Also, showing some examples of the elision dot (in green circles), which is constantly shown at x-height within EPA.

```
Hwi lucst as so wildli. Hwot seest as afar.
A specter, a gost from at ded.

Prins.—It is not at bodiles form ov at ded,
Nor at specter ov det, at afrits,
which can be spected at a spirit two monercs more dred,
at spirit, in lon-enslaved nasunz hat bred
at boldness two galenj ar rits.
It bursts from at dept ov at priz'n-hos, hwar
It has lan in stron ganz, wo is mai
Tiz a hundred-id, hundred-armed jiant, hwil dar
at strug'l, o Fredum, wit at.

M. P.
```

Fig. 1848h/i: ibid., excerpts from p.276/280.

Excerpt from an article "The Pronunciation of Lowland Scots", showing the letters not listed in the alphabet table in fig. 1848a: U+A7C1 LATIN SMALL LETTER TURNED CLOSED OMEGA, U+A7B0 LATIN SMALL LETTER ALPHA WITH INSIDE BAR. The second figure shows an interlinear sample, (F) being the claimed Scots pronunciation, (E) the claimed Standard English one.

Fig. 1851b: ibid., excerpt from p.53.

Showing an example of U+2E50 WIGGLY EXCLAMATION MARK (encircled).

Also, this book being a primer using large types, shows a good example for U+A7B8 LATIN SMALL LETTER I WITH SPIRAL TAIL, displaying clearly its unique spiral tail.

Mį Slat.

Pra giv me mi nu slat, i wis tuu dre on it. Mi slat haz a fin red ej. H wil dre a be. Hwot a lon noz he haz, and but wun qrm? Ny i wil dre a cy, and a milc Fig. 1851c: Cubi i Soler, Mariano: Nuevo Sistema (Bath 1851), p. 8.

Showing a variation of the EPA 1847. Presumably, the use of "E"/"\varepsilon" for [i:] seemed not acceptable for a Spanish audience, thus U+A7B9/U+A7BA LATIN CAPITAL/SMALL LETTER I WITH RIGHT U-TURN AT BOTTOM (marked red) were introduced to indicate that phoneme.

Also, the "e" was used to mark liquids being syllabic, using U+FB0A LATIN CAPITAL LETTER E WITHOUT MIDDLE BAR as capital form of that letter.

ALFABETO FONÉTICO INGLES.

En la primera columna se hallan las letras mayúsculas i minúsculas. En la segunda columna hai el modo de pronunciarlas segun se suenan las letras cursivas en las palabras inglesas que siguen. En la tercera, está su correspondiente sonido, segun pronunciamos nosotros los españoles, las letras cursivas en las vozes castellanas adjuntas: donde este sonido no es ecsacto, o al ménos mui aprocsimado, se pone una señal de referencia a la pájina inmediata, en que se dan esplicaciones claras i terminantes. En la cuarta i última columna, se halla el nombre de las letras del alfabeto fonético, escrito, donde es posible, en ortografía castellana; i, donde no, en ortografía fonética.

Fig. 1852a/b: The Phonetic Journal, Vol. 7, London 1852. Excerpts from p.5 and p.23. In 1852, Isaac Pitman began to try to "improve" the EPA, changing letterforms several times (the forms beyond Jan. 1852 not shown here). While these letterforms are not subject of this proposal, one of them (see red circle) was used as the source for the canonical lowercase form to U+A7B9 LATIN CAPITAL LETTER I WITH RIGHT U-TURN AT ВОТТОМ.

The complete U-turn together with the thick dot at its end distinguishes this letter from the Latin iota, which usually has a 90° or 120° turn without a distinctive closing.

No. 4, Jan., 1847.

eaqeom, ieaouu, josu, ieaouu, jsm, w wyh, pbtd gjcg, fvtd sz j 3, lr, mnn.

Specimen.

Nutin hwotever iz mor tu be dezird, or mor delitful, dan de lit ov truit: for it iz de sors ov wizdum. Hwen de mind iz harast wid obscuriti, distracted bi dats, renderd torpid or sad'nd bi ignorans or felsitiz, and trut emerjez az from a darc abís, it sinz fort instantaniusli, lie de sun dispersin mists and vapurz, or lie de den dispelin de sadz ov darcnes.

No, 5, Proposed Jan., 1852.

Specimen.

Nuôin hwotever iz mor tu bi dezird, or mor delitful, dan de lit ov truô: for it iz de sors ov wiz-dum. Hwen de mind iz harast wid obscuriti, distracted bi dats, renderd torpid or sadend bi ignorans or folsitiz, and truô emerjez az from a darc abís, it sinz forô instanteniusli, lic de sun dispersin mists and vepurz, or lie de don dispelin de sedz ov darcnes.

No 6, Romanic Alphabet.

Fig. 1853a: The Plowshare, Vol. 5, No. 34; Washington (DC) 1853; p.171.

This was another of the magazines which used and discussed the EPA (see fig. 1852c). It contains discussion of letterforms and their application to various vocal discrimination schemes even more thoroughly than the magazine cited by fig. 1852c. However, the use of the punctuation marks of EPA 1847 is continued unchangedly. The example here shows an independent evidence for the U+2E4F PHONOTYPIC QUESTION MARK being different from a mirrored question mark (see red circles).

Fig. 1855a: American Phonetic Journal (ed. Randall P. Prosser), Cincinnati (Ohio) 1853, p.12. This is the first complete listing of EPA 1855 (the "Cincinnati alphabet"), the version which was propagated by a group of supporters in Cincinnati. This alphabet was used there without any changes at least until 1864 (see fig. 1864b).

The punctuation marks are the same as in EPA 1847 (see again U+2E4F PHONOTYPIC QUESTION MARK not being a mirror image of the "ordinary" question mark). The elision dot is called here "inverted period", which obviously refers to the application of the lead type. The missing uppercase form for η (last line of the table, right part) is considered being a typo, as the usual EPA form is found in other documents using the Cincinnati alphabet (see fig. 1864b).

THE PHONETIC ALPHABET. The Phonetic letters in the first column are pronounced like the italic letters that follow. The last column contains the names of the letters.						
	Long Vowels.		,	Explodents.		
s 3	eel	з	Рр	palepe		
•	earth			balebe		
	ale		1	tamete		
	air			damede		
	arms			cheerga		
	oak			jeerja ka

Fig. 1855c: The American Phonetic Dictionary of the English Language. Designed by Nathanael Storrs, compiled by Dan S. Smalley. Cincinnati 1855. Showing the title page, p.iii claiming this being the first phonetic dictionary of the English language, and an excerpt from p.xxxi showing EPA 1855 (the Cincinnati alphabet).

THE

PREFACE.

AMERICAN

PHONETIC DICTIONARY

ENGLISH LANGUAGE.

TO THE PRESENT STATE OF LITERATURE AND ITH PRONOUNCING VOCABULARIES OF ULASSIC SCRIPTURAL, AND GEOGRAPHICAL NAMES.

> Designed by Nathaniel Storrs. Compiled by Dan S. Smalley.

WITH A GENERAL INTRODUCTION

BY A. J. ELLIS, B. A.

CINCINNATI: UINCINNATI:
LONGLEY BROTHERS, PHONETIC PUBLISHERS,
BOSTON, OTIS CLAPP. NEW YORK, FOWLER & WELLS;
PHILADELPHIA, FOWLER, WELLS & CO.;
LONDON, FRED PITMAN.
1855.

In presenting to the world its first Phonetic Dictionary, the Compiler feels confident that the simple, but appropriate dress, with which he has clothed the spoken language, cannot fail to commend itself to the favorable consideration of every friend of human progress. Owing to the inherent defects of our common orthography, lexicographys have been compelled to employ a notation more or less complicated and indefinite, which has made the study of pronunciation, by means of dictionarios, distasteful and unsatisfactors. All diacritic marks are more or less objectionable on account of their obscurity and necessary multiplicity, resulting from the use of different letters marked to represent the same sound.

The object of the present work is to correctly represent, by means of a Phonetic alphabet, that pronunciation of the English language which is supported by the greatest number of competent authorities, and to define and explain the words as they are generally employed by standard writers. The common alphabet being defective, in not having a sufficient number of letters to represent accurately the pronunciation of the language, new ones have been added to make up the deficiency, harmonizing in form and proportion with the old letters. Each letter represents but one sound, consequently its power is always known when it has once been learned, and

on doubt or difficulty will be experienced in spelling or pronouncing the words of the English language written in this new orthography.

Much attention has been given to pronunciation; and the most reliable authorities have been consulted. The Compiler has received valuable information from the writings of Walker, Webster, Worcester, B. H. Smart, and Alexander Melville Bell, all of whom are well known for their critical propulates of setheral weights. knowledge of orthoepy. With respect to words variously pronounced, that pronunciation is placed first which is supported by the greatest number of competent authorities.

An attempt has been made to correctly represent the obscure vowels in unaccented syllables, the quality of which is not indicated in the dictionaries

the vowel is short the accent falls upon the following consonant, and they would therefore accent hε'pig, hap'i. This is an error which may be traced to the inconsistencies of romanic spelling.

Fig. 1855f: Andrew Comstock: A Treatise on Phonology; Philadelphia (PA)1855; p.16
The alphabet shown here is one of the competitors of the EPA, published in the same era
(promoted by the author in exactly this form at least from 1846 to 1858). While this alphabet
is not subject of this proposal, it is the source of the lowercase letterform U+A7AD LATIN
SMALL LETTER A WITH LOOP.

(An enlarged excerpt from this table, containing that letter, is shown at the lower right.)

A PHONETIC ALPHABET FOR THE ENGLISH LANGUAGE.

BY ANDREW COMSTOCK, M.D.

In this Table there is a letter for each of the 38 elementary sounds of the English Language; and, for the sake of brevity, there are 6 compound letters, each to be used, in particular instances, to represent two elementary sounds. There are also tone-marks, to represent accent, inflection, and intonation.

THE 38 SIMPLE LETTERS.								
	15 Vowels. 14 Subvowels.			9 Aspirates.				
E	е	ale	В	b	<i>b</i> ow	P	p	pit
A	a	arm	D	d	day	Т	t	<i>t</i> in
ω	۵	all	G	g	gay	K	k	<i>k</i> ite
A	(B)	<i>a</i> n	v	V	vile	F	\mathbf{f}	$f_{ m ame}$
I	x	eve	Δ	δ	then	Θ	θ	<i>th</i> in
ε	3	end	Z	Z	zone	S	ន	sin
I	i	ile	J	j	azure	C	c	shade
I	I	in	L	1	<i>l</i> ight	Н	h	hut
Ω	ω	old	R	r	roll	Q	q	what
R	ช	l <i>o</i> se	M	m	<i>m</i> et	Tone-marks to represent Accent, Inflec-		
0	0	<i>o</i> n	N	n	not			
IJ	IJ	tube	И	ŋ	song	tion, and Intona- tion.		
\mathbf{u}	u	up	W	w	wo	,,,,,,		
υ	U	full	Y	У	yoke	* * * * * * * * * *		
Φ	φ	out						
THE 6 COMPOUND LETTERS.								
α	α	oil	D	đ	<i>j</i> ob	T	ċ	etch
ε	อ	air	G	g	tu <i>gs</i>	X	x	oa <i>ks</i>
								(16)

Fig. 1860f: ibid., excerpt from p.8. — Around 1860, Isaac Pitman propagated the duodecimal system, and in fact used it in some publications like the one shown here. He used turned and (in the case of the 3) modified forms of the digits 2 and 3 as digits for ten and eleven (U+218A TURNED DIGIT TWO, U+218B TURNED EZH-SHAPED DIGIT THREE).

He numbering ov de paragrafs bei duzenz and grosez iz a kontribiuigon toardz a yuniversal sistem ov kountin, muni, wets, and mejurz, best on de number twelv and its multipelz. He seinz '(?, ?)" reprezent de numberz ten and eleven, and "10" reprezents wun duzen; "16," wun duzen and siks; 453, for gros, feiv duzen, and bri; 7,819, seven tripelz, et gros, wun duzen and nein; and so on. It gud bi konsiderd a stron argiument for a twelv sistem ov notegon dat do wi profes tu rekon bei tenz, yet wi kount artikelz in tred, djenerali, bei de duzen and de gros; mek de giling konsist ov twelv pens; mejur bei de fut kontening twelv ingez; and diveid de de intu tuu duzen ourz.

Fig. 1860g: ibid., excerpt from p.12 (noted as "10" in the duodecimal system). The encircled duodecimal number shows clearly that the shape of the duodecimal digit eleven is based on an ezh-shaped digit three is intentional, as the first digit, an "ordinary" unturned digit three, is not ezh-shaped.

10 Djemz ov Wizdom.

32.

38. Law iz de leif ov relidjon, and ov de sel, and ov de toute.

39. He ferst megon ov relidjon iz tu snderstand hwot iz tru ov God; and de sekond iz tu ekspres it in our leivz, and tu kopi it out in our works: de former iz our wizdom, and de later iz our gudnes.

36. Her iz no stronger simpabi dan dát bitwin trub and gud.

Ol mei leif lon, ei hav biheld wid most respekt de man hu niú himself, and niú de wez bifor him, and from amynst dem tgoz konsideretli, wid a klir forseit, not a bleindfold kyredj; and havin tgozen, wid a stedfast meind pyrsiud hiz pyrpos.

40. He binz ov de bodi myst in a mejur dei, bifor man kan bi born anim, or ridjenereted. He bodi itself myst

Fig. 1864a: The Reporting Magazine; Vol. 3, 1864: Appendix "Key to the Reporting Magazine", excerpt from p.1: *Showing the use of EPA 1856 in 1864.*

THE PHONETIC ALPHABET.

The Phonetic Alphabet consists of 34 letters, namely, the 23 useful letters of the common alphabet (c, q and x being rejected) and the 11 new ones below. J is used for the French j (zh), or g in edge, or s in "vision;" hence dj represents J in John, and dg in edge. T_G (t sh) represents ch in chess, and tch in catch. I and w are consonants; wh being replaced by hw. The vowels a, e, i, o, u, have invariably their short sounds, as in pat, pet, pit, pot, put. All the other old letters have their usual signification. The italic letters in the words in the third line denote the sounds of the letters.

The marks of punctuation are the same as in the old orthography, excepting the following changes and additions: the mark of interrogation is placed before the first word in a sentence that indicates a query, 7 at the end of a sequence indicates doubt, ! laughter, ! surprise. I sorrow; the inverted ' signifies the

Rules of Accent.

Words of two syllables are accented on the first.
 Words of three or more syllables are accented on the third.
 Words of three or more syllables are accented on the third from the end;
 Unless the last syllable but one contain a long rowel or dipthong, or the last syllable but hable begin with f, 5, or y,—in which case the accent falls on the last syllable but

ene.

Exceptions to these rules are marked with the sign ' placed over the vowel to

us accented. Words wholly printed in capitals, and French words, (which have no regularly accented syllables,) are not thus marked.

HE GOSPEL AKORDIN TU SANT MARU.

Fig. 1868a: The Trial of William Rodger (Isaac Pitman; London 1868); p. vi and p.3. Showing the EPA 1868, which reintroduces single letters for some diphthongs and consonant clusters.

The encircled letter introduced here (U+A7C7 LATIN CAPITAL LETTER U WITH INSIDE BAR) is in fact a TURNED ROUNDTOP A (see the proposed U+A7AE LATIN CAPITAL LETTER ROUNDTOP A).

Therefore, a unification with U+0244 LATIN CAPITAL LETTER U BAR is inappropriate, as this letter has a protruding bar. The difference is comparable to:

U+019F LATIN CAPITAL LETTER O WITH MIDDLE TILDE (which, as the reference glyph in the Standard shows, is in fact an O with non-protruding bar; this letter is common in EPA), vs. U+A74A LATIN CAPITAL LETTER O WITH LONG STROKE OVERLAY, showing a protruding bar.

Fig. 1880b: On Spelling (M. Müller, London 1880); p.46:

Showing an example using the 1871 subset of EPA 1868. The text claims that Isaac Pitman's "Phonetic Journal" is distributed by 12,400 copies in 1880.

If ei hav spoken stroyli in ssport ov Mr Pitman'z sistem, it iz not bekoz on ol points ei konsider it siupirior tu de sistemz prepard bei sder reformerz, hu ar deli inkrisin in number; bet gifti bekoz it haz bin tested so larjli, and haz stud de test wel. Mr Pitman'z Fonetik Jernal haz nou [1880] bin publift fertiet virz, and if it iz non dat it iz publift wikli in 12,400 kopiz, iç kopi reprezentin at list for or feiv riderz, it me not sim so veri fulif, after ol, if wi imajin dat der iz sum veital pouer in dat insignifikant jerm.

Fig. 1888a: The Phonetic Journal, vol. 47 (London 1888); excerpt from p.1. Showing an again reduced version of EPA 1868 (however with no new case pairings; thus this stage can still be subsumed under EPA 1868).

THE PHONETIC ALPHABET.

The Phonetic Alphabet consists of 36 letters, namely, the 23 useful letters of the common alphabet (c, q, and x being rejected,) and the 13 new ones below. The vowels a, e, i, o, u have invariably their short sounds, as in pat, pet, pit, pot, put. All the other old letters have their usual signification. The italic letters in the words in the fourth line denote the sounds of the letters.

	VOWELS.					1			CONSO	NANT	S.		
Ав,	εε,	(E e)	Φį:	Ω ω,	σσ,	Ա Վ։	૪ ૪.	Сç,	Бf,	Ηđ,	Σ ∫,	Z 3,	Иŋ.
H a ,	Εε,	(E e)	F_i :	΄Ο ω,	Øо,	U y:	8 s.						
Aa	L e	/8 e/	8 1	Wa	Q o	U y	F s. son, but.	E9	% B	\mathcal{H} ∂	SI	34	Dy.
	age, air,	pet,	eat:	all,	ope,	food:	son, but.	chair,	thin,	then,	shoe,	vision,	sing.
smz,	εj, εr,	pet,	įt:	ωl,	ep,	fųd:	syn, byt.	ger,	in,	đen,	∫ ų,	vizon,	.siŋ.

The order of the Phonetic Alphabet, and the names of the letters are,

Consonants:—p, b; t, d; g, j; k, g: f, v; f, d; s, z; \int , z: m, n, n: l, r: w, y: h. pee, bee; tee, dee; chay, jay; kay, gay: ef, vee; ith, thee; es, zee; ish, zhee: em, en, ing: el, ar: way, yay: aitch.

Vowels:—a, ϵ ; e, ϵ ; i, i; o, ω ; 8, σ ; u, u. Diphthongs:—ei, iu, ou, ai, oi. αt , αt ; et, eh; it, ee: ot, awe; ut, oh; ööt, oo. as in by, new, now, αy , boy.

Fig. 1888b/c: ibid., enlarged parts from the same excerpt (to show the exact letterforms).

\mathcal{S} 8. \mathcal{E} 9, \mathcal{K} 1, \mathcal{A} 1, \mathcal{L} 5, \mathcal{K} 3, \mathcal{V} 9. \mathcal{S} 8. \mathcal{E} 9, \mathcal{K} 10, \mathcal{A} 11, \mathcal{L} 15, \mathcal{K} 3, \mathcal{V} 9. \mathcal{S} 8. \mathcal{E} 9, \mathcal{K} 16, \mathcal{A} 16, \mathcal{L} 16, \mathcal{L} 16, \mathcal{L} 17, \mathcal{L} 3, \mathcal{V} 9. \mathcal{L} 9, \mathcal{L} 16, \mathcal{L} 16, \mathcal{L} 16, \mathcal{L} 16, \mathcal{L} 17, \mathcal{L} 17, \mathcal{L} 18, \mathcal{L} 17, \mathcal{L} 18, \mathcal{L} 18, \mathcal{L} 18, \mathcal{L} 18, \mathcal{L} 19, $\mathcal{L$

Fig. 1996a: Pullum, Geoffrey K., and Ladusaw, William A.: Phonetic Symbol Guide (second edition). Chicago and London 1996, ISBN 0-226-68536-5, p. 69 and 71.

The left picture shows the (not yet encoded) "Baby gamma" as a phonetic symbol (p. 69), while the right one shows the "ram's horns" (U+0264), which is the preferred character to be used in phonetics.

The proposed U+A7C3 LATIN SMALL LETTER OW has a "belly" which extends to the full breadth of the letter, making this "o part" the predominant feature of the letter.

The two Pullum & Ladusaw letters, however, have a tiny "belly", making the arms the predominant feature of the letter.

Thus, the "ow" is deliberately not proposed as "baby gamma".

Baby Gamma

RAM'S HORNS

IPA Usage: Not currently used (superseded by Ram's Horns), but encountered in pre-1989 IPA transcriptions for Cardinal 15, a close mid back unrounded vowel. American Usage: When used, denotes an upper mid back rounded vowel. Comments: This character was well established in earlier IPA usage (see Principles (p. 6)), but it has often

IPA USAGE

Cardinal Vowel No. 15: close mid back unrounded. The secondary cardinal vowel corresponding to Cardinal 7, [o].

AMERICAN USAGE When used, same as IPA.

Fig. 1996b: Schmitter, Peter (ed.): Geschichte der Sprachtheorie, Vol. 5: Sprachtheorien der Neuzeit II. Tübingen 1996, ISBN 3-8233-5011-0, p. 315. Showing use of EPA in referring to a work originally published in EPA.

Fig. 2008a: George, Dieter: Historisches Ortsnamenbuch von Bayern, Oberfranken Band 6: Lichtenfels. München 2008, p.96.

While this work is completely unrelated to EPA, it shows U+A7B6 LATIN SMALL LETTER I WITH LONG STROKE OVERLAY, which is proposed to be the canonical lower case form for U+A7B5 LATIN CAPITAL LETTER I WITH LONG STROKE OVERLAY. The work from where this picture is taken uses the long stroke overlays to indicate centralized articulation of a vowel. (More details will be given in a future proposal about characters used in German dialectology.)

needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

^{.1} Form number: N3702-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05, 2009-11)

C. Technical - Justification

Has this proposal for addition of character(s) been submitted before? If YES explain (one character proposed simultaneously in another document is re-	No eferred)
2. Has contact been made to members of the user community (for example: National Body,	ionouj
user groups of the script or characters, other experts, etc.)?	No
If VES with whom?	
If YES, available relevant documents:	
3. Information on the user community for the proposed characters (for example:	Voo
size, demographics, information technology use, or publishing use) is included?	Yes
Reference: see text	
	Rare
Reference: see text	
5. Are the proposed characters in current use by the user community?	
If YES, where? Reference:	
6. After giving due considerations to the principles in the P&P document must the proposed charact	ers be entirely
in the BMP?	Yes
If YES, is a rationale provided?	
If YES, reference: To keep them in line with similar character	
7. Should the proposed characters be kept together in a contiguous range (rather than being scatter	ed)? Yes
8. Can any of the proposed characters be considered a presentation form of an existing	
character or character sequence?	No
If YES, is a rationale for its inclusion provided?	
If YES, reference:	
9. Can any of the proposed characters be encoded using a composed character sequence of either	
existing characters or other proposed characters?	No
If YES, is a rationale for its inclusion provided?	
If YES, reference:	
10. Can any of the proposed character(s) be considered to be similar (in appearance or function)	
to an existing character?	No
If YES, is a rationale for its inclusion provided?	
If YES, reference:	
11. Does the proposal include use of combining characters and/or use of composite sequences?	No
If YES, is a rationale for such use provided?	
If YES, reference:	
Is a list of composite sequences and their corresponding glyph images (graphic symbols) prov	/ided?
If YES, reference:	
12. Does the proposal contain characters with any special properties such as	
	No
If YES, describe in detail (include attachment if necessary)	
13. Does the proposal contain any Ideographic compatibility character(s)?	No
If YES, is the equivalent corresponding unified ideographic character(s) identified?	
If V/CO	
If YES, reference:
