1. Introduction

The Szekely-Hungarian Rovas (/seːkɛj ˈhɒŋˈeərɪən roˈvaːʃ/ (SHR)) is a contemporary writing system of the Hungarians. The primary purpose of encoding the SHR characters is serving the present-day SHR orthography. Therefore, the SHR character repertoire and the character names must be in accordance to the present-day SHR usage (see Ch. 4). Additionally, encoding the only historically used SHR characters is necessary as well for the written communication of the SHR researchers (N4007, 2011-01-21).

The author of this study emphasizes that all historical and linguistic statements in the Rovas proposals (Khazarian Rovas: N3999, Carpathian Basin Rovas: N4006, and SHR: N4007) are consequently based on theories and statements of officially acknowledged scholars: historians, archaeologists, and linguists. Moreover, the transcription of each relic uses the drawings of archaeologists exclusively.

In this document, the IPA (International Phonetic Alphabet) symbols are applied for representing phonemes extending with the symbols for the undetermined back /不利于/ and front /不利于/ vowels.

2. Comments on SHR Characters

2.1. Semantical distinction

As it is known, the character is the smallest component of written language that has semantic value; refers to the abstract meaning and/or shape, rather than a specific shape. In displaying Unicode character data, one or more glyphs may be selected to depict a particular character. However, if two characters semantically distinct they are encoded individually despite of the similarities of their glyph representations. Two characters are semantically distinct if they represent different sounds in the same orthography, or their glyphs are different and unrelated. Characters proposed to be encoded in N4007 are semantically distinct.

The character repertoires of the Carpathian Basin Rovas and the Khazarian Rovas show significant cultural influence of Aramaic-derivative scripts: Imperial Aramaic, Middle Iranian (Parthian, Pahlavi), and Syriac. Furthermore, the influence of the Lydian script on the Rovas scripts can be detected as well. This fact is not surprising, as in the Eurasian Steppe the subsequent empires were geographically large, and they were in contact with several other cultures through trading and warfare. In the Carpathian Basin, the Szekely-Hungarian Rovas (SHR) emerged based on two other Rovas scripts; however SHR also obtained a few loan characters from other scripts used by neighboring nations, including a character from the Greek alphabet. These facts can be utilized in the research of the Rovas script history.

In the following, the rationale of encoding some disputed SHR characters is presented.

2.2. SHR characters with partly similar glyphs

<table>
<thead>
<tr>
<th>SHR characters</th>
<th>Reasoning</th>
</tr>
</thead>
<tbody>
<tr>
<td>˙F and ˙ DIAGONAL F</td>
<td>The SHR ˙ F originated from the Greek Θ THETA (capital letter), and SHR ˙ DIAGONAL F was borrowed from the Glagolitic Փ FITA, which can be derived from the Greek ð THETA (minuscule letter). The SHR ˙ F is used in the present-day SHR orthography; however, the unrelated SHR ˙ DIAGONAL F has historical significance.</td>
</tr>
<tr>
<td>˙ K and ˙ TRIANGULAR K</td>
<td>The SHR ˙ K can be derived from the Khazarian Rovas derabad K, which originated from the Syriac (Nestorian) ܩ QOPH /q/. Oppositely, the SHR ˙ TRIANGULAR K can be derived indirectly from the Imperial Aramaic ❶ QOPH similarly to its other descendant, the Old Turkic ı IK. It is noteworthy that the number of vertices of the glyphs were usually kept during the script history. In the last millennium, the SHR ˙ K did not change. In the Khazarian Rovas, the shape of the ｶ K was also stable during the centuries of its use. Moreover, there is no any evidence for the relation between the ˙ K and the ˙ TRIANGULAR K.</td>
</tr>
<tr>
<td>IDictionary ENDED O</td>
<td>The SHR .Dictionary O is the derivative of the Carpathian Basin Rovas ถ่าย O, and the SHR  IDictionary ENDED O is the direct descendant of the Glagolitic ꬥ ON. See also the discussion of the Vargyas relic in Ch. 3.</td>

6 Hosszú, 2011, Chapter 4 (The Rovas Atlas)
7 Vékony, 1986
These symbols are cognate; in the Middle Ages, they were supposedly invented from each other. Originally, all of these were probably developed from the ligature of a ligature of $\mathcal{N} + \mathcal{O} + \mathcal{P}$, and its meaning was /nop/ 'period, day' (present-day: /nɒp/). They can have been used in a calendar, where the dates of the mandatory feasts were listed. However, in the present-day use, they are semantically distinct syllabic symbols: \( \mathcal{J} \text{AMB} /\text{ɒmb}/, \mathcal{û} \text{EMP} /\text{emp}/, \mathcal{ü} \text{MB} /\text{mb}/, \mathcal{P} \text{NAP} /\text{nɒp}/, \mathcal{Î} \text{NB} /\text{nb}/, \mathcal{R} \text{TPRU} /\text{hoːnɒp}/, \text{D} \text{TPRUS} /\text{eːv}/.

It is noteworthy that their design style is similar to the development of \( \mathcal{W} \text{CLOSE UEE} /\text{y}/ \), which was created from the ligature of \( /\text{e}/ /\text{e}/ /\text{eː}/ \) and \( /\text{e}/ \) (mirrored glyph). Therefore, all of these symbols were surely developed in the same period. This period of the SHR development between the 11th and the 14th centuries can be called as “Age of Ligatures”.

\( \mathcal{Y} \text{ZS} \) and \( \mathcal{V} \text{SCH} \)

\( \mathcal{V} \text{SCH} \) was derived from \( \mathcal{Y} \text{ZS} \), probably in the 17th century. They have distinct sound values: \( \mathcal{Y} \text{ZS} /\text{ʒ}/ \) and \( \mathcal{V} \text{SCH} /\text{ʃ}/ \). Besides their historical significance, there is a need for their use in the present-day SHR orthography, especially in German-origin Hungarian family names: \( \text{Fischer} \text{həʃ, Schiller} \text{ʃɪlɐ} \).

\( \mathcal{Á} \text{ANT} \) and \( \mathcal{É} \text{ENT} \)

Historically, these characters were glyph variants. However, in the present-day use their sound values are distinct: \( \mathcal{Á} \text{ANT} /\text{ɒnt}/ \) and \( \mathcal{É} \text{ENT} /\text{ent}/ \).

2.3. SHR characters of only historical use

\( \mathcal{N} \text{GH} \)

\( \mathcal{N} \text{GH} /\gamma/ \) originated from the Parthian \( \mathcal{N} \text{HETH} /\chi/\mathcal{H}/ \), and it exists in the Carpathians Basin Rovas (N4006) and the Khazarian Rovas (N3999) as well. The mirrored form \( \mathcal{N} \text{GH} /\gamma/ \) was also common in that Rovas scripts (e.g. on Fig. 2-7/a in N4006). In the Hungarian language, in the 11th century, at the end of the words, /\gamma/ was vocalized, and it became /\o/ or /\u/.

They were used as diphthongs with the preceding vowel: /\o\u/ and /\u\u/. In the 12th-14th centuries, a monophthongization occurred: /\o\u/ and /\u\u/ became /\o\u:/ and /\u\u:/, respectively. This process ended up to the 14th century. This linguistic process can be detected in the SHR glyph variations of the \( \mathcal{N} \text{GH} /\gamma/ \) appeared for representing /\o\u\o\u:/: the \( \mathcal{¹} \text{OPEN UE} \) and its other glyph variant: \( \mathcal{N} \). It is noteworthy that before the 12th century, the sound /\o\u:/ did not exist in the Hungarian language. See also the discussion of the Vargyas relic (Ch. 3).

\( \mathcal{¹} \text{OPEN V} \)

\( \mathcal{¹} \text{OPEN V} /\beta/ \) is the indirect descendant of the Lydian \( \mathcal{¹} \text{V} /\nu/ \). It was also common in the Carpathian Basin Rovas and in the Khazarian Rovas. \( \mathcal{¹} \text{OPEN V} \) disappeared from SHR in the 12th-13th centuries, when the linguistic change /\beta/\nu/\nu/ occurred in the Hungarian language. Its use is attested in the Székelydálya relic: in the word \( \mathcal{¹} \text{OPEN V} /\nu\nu\nu\nu/ \) ‘year’ (archaic form of the present-day /estɛndɛ:/ ‘year’) in the right bottom part of Fig. 2-3 in N4007.

3. An archaic SHR relic: the Vargyas inscription

A stone inscription was found in Vargyas Village (Szekelyland, Romania) in a church (Fig. 3-1). Its transcription was made by Vékony and improved by Zelliger (Table 3-1). The sentence was cited from Gospel of John: “Woman, behold your son”. The stone could be the foundation of a crucifix or a statue representing the scene of Calvary, according to its shape and the meaning of the inscription.

</tbody>
</table>

*Table 3-1: Transcription of the Vargyas relic*

The text contains the SHR character Ń GH /ɣ/. In the 11th century, the sound /ɣ/ became almost extinct in the Hungarian language; however, sometimes it remained in written texts. The use of /ɣ/ in this relic may show a strong archaism, using an earlier state of the Hungarian language. Linguist Korompay claimed that after the 11th century, the use of /ɣ/ became very rare, but the diphthongs developed from /ɣ/ frequently occurs in the Hungarian Latin-based sources. According to linguist Zelliger, the text of the inscription was probably a widely known phrase in the time of carving, and the text could not be created later than the 11th century, moreover, it could be even much earlier. According to linguist E. Abaffy, as early as in the 10th century, the change /fiɔɣ/> /fiuː/ appeared. This inscription contains the earlier form: /fiɔɣ/. Consequently, the language of text on the Vargyas relic is no later then the 10th-11th centuries, albeit the *inscription* was probably carved into the stone in the 12th century.

The existence of the first word /meː/ in the epoch of the relic is proved by Hungarian linguistics. The glyph of CLOSE E /ɛ/ in the inscription is being only formally identical to the H /h/. In addition, at the time of

26 D. Máta, 2003, p. 402
the text, there was not yet sound /h/ in the Hungarian language; therefore the symbol ș may not mean /h/. The SHR character of /h/ (ș H) was created by duplicating ș CH /x/ in the Age of Ligatures (Subch. 2.2).

The character M V was used for /y/ that demonstrates the earliest use of this SHR character. Later, this character was also used for representing /u/ and then /v/ because of the influence of the Hungarian Latin-based orthography, in which the Latin letters u and v similarly represented /u/, /y/, and /v/25. The SHR character of /u/ was developed from M V /y/û/û/ by duplicating its glyph: ă U /û/û:y/. This innovation was carried out in the Age of Ligatures, see Subch. 2.2. The duplication shows the influence of the Hungarian Latin-based orthography, in which the duplicated characters uu and vv were common and used for /û/û:y:/y:/y:/25.

In this relic, the character Ý T represented both /d/ and /ď/. There is another example for this representation; see the Constantinople inscription (word Őâțț /kʰdʒiː/ in Fig. 2-5 in N4007). In the Middle Ages, the present-day SHR character ď proved to be very probably derived from the character Ý /d/ in as a glyph variant. Later the use of the Ý /d/ was restricted to represent /ď/.

There is an earlier attempt for transcribing the Vargyas relic: /mʰiːɾtaːn/ iːɾtʰaːn kʰvʰɛt/ ‘Michael wrote (?) [the] stone’.26 However, this solution is questionable for several reasons: (i) This transcription attempt presumes that the long vowel /aː/ was not written in two words (/mʰiːɾ/ and /iːɾtʰaːn/). This solution is in contradiction to the medieval SHR relics, in which the long vowels were usually written, oppositely to the frequently skipped short vowels.30 (ii) The transcription attempt cannot interpret the symbol ı CIRCLE ENDED O and ignores it. Another version of this earlier attempt is /mʰiːɾtʰaːn/ j : iːɾtʰaːn kʰvʰɛt/, which interprets the ı CIRCLE ENDED O as a colon (:). However, the punctuation mark colon (:) first appeared in late fourteenth century, according to Reimer.31 As the Vargyas relic is much older; the use of the colon (:) in this inscription is impossible. (iii) As linguist Zelliger stated, the word /iːɾtʰaːn/ never meant ‘wrote’. The word /iːɾtʰaːn/ is the perfect participle of the Hungarian verb /iːɾnǐː/ ‘to write’ with possessive and adverbial suffixes. Moreover, linguistically, the whole expression of the older transcription is very unlike at the time of the Vargyas relic.32 Because of the arguments above, this transcription is surely erroneous.

The Vargyas inscription is a very important link between the Szekely-Hungarian Rovas and the earlier Rovas scripts (Carpathian Basin Rovas – N4006 and Khazarian Rovas – N3999), since it contains the character N GH /ɣ/. The sound /ɣ/ was widely used in the Hungarian language before the eleventh century. Later it changed to other sounds (together with its preceding vowel), for instance, to /øː/ and /yː/. That is the reason why N GH /ɣ/ is not found in the later SHR relics. However, variants of N GH /ɣ/ survived as the SHR vowel ɣ, OPEN UE /ø/øːːyː/ (Subch. 2.3).

4. Naming

4.1. Script name

The Rovas scripts dominantly derive from the Phoenician-origin scripts used in Persia (Iran). Among others, Sebestyén described the Phoenician roots of SHR, Róna-Tas stated that a kind of Semitic script is the ancestor of SHR.33 Scholars have examined the indirect relation to the Old Turkic script as well.34 Needless to say that the Rovas scripts are obviously different from the Runic script (its subgroups: early German, Scandinavian, etc.) and the Old Turkic script as well (its subgroups: Baykal-Lena area, Yenisei valley, etc.).35 Therefore, the Hungarian-origin term Rovas /rovaːʃ/ is used for naming the script and not the German-origin one: rune or runic. The Germanic root of run- was proved by Stötzner in 2008.36 Additionally, the term Rovas has been used

</tbody>
</table>

*Table 4-1*: Examples of the international use of the word Rovas

4.2. Character name

The Szekely-Hungarian Rovas script is still a contemporary writing system of the Hungarians. In some historical relics, the character names preceded with vowels (typically e). However, the vast majority of the present-day publications use the character names identical to those of the Hungarian Latin-based orthography.

5. Acknowledgement

I thank my Mother for her patience, the exactness learned from her and her useful advices during the Rovas researches when we discussed many details. I also offer this study to my Father who introduced me to mathematics, stenography and history of Hungary.

I also express my appreciation for the continuous professional support to:

Dr. Klára Korompay, Candidate of Sciences of the Hungarian Academy of Sciences, Associate Professor in the Department of Hungarian Historical Linguistics, Sociolinguistics and Dialectology at the Eötvös Loránd University,

Mr. Péter Krauth, MSc in Mathematics, President of the MB-819 Informatics Technical Committee of the Hungarian Standards Institution, Member of the Presidency of the itSMF Hungary,

Mr. Tamás Rumi, MSc in Architecture, MBA, Curator of the Rovas Foundation,

Mr. László Sípos, MSc in Architecture, MBA, President of the Rovas Foundation, and

Dr. Erzsébet Zelliger, Candidate of Sciences of the Hungarian Academy of Sciences, Associate Professor in the Department of Hungarian Historical Linguistics, Sociolinguistics and Dialectology at the Eötvös Loránd University.
