

Title: Draft additional repertoire for ISO/IEC 10646:2014 (4th edition)

Date: 2012-10-25

L2/12-357 WG2 N4383

Source: Michel Suignard, project director

Status: *Project Editor's summary of the character repertoire addition as of October 25 2012*

Action: For review by WG2 and UTC experts

Distribution: WG2 and UTC

Replaces:

Status

This document presents a summary of all characters that constitute the tentative new repertoire for ISO/IEC 10646 4th edition, with code positions, representative glyphs and character names. In this document, the names and code positions are shown as currently approved by WG2 for the text of the forthcoming ballot. The purpose of this document is to allow WG2 delegates to review the character names, code positions and glyphs and notify the editor if they differ from what was approved in the meeting. A separate ballot document will be submitted by the project editor after the meeting.

Manner of Presentation

The character names and code points shown are the same for Unicode and ISO/IEC 10646, including annotations.

In this document, the new characters are not shown in the context of the existing characters. The existing characters will be shown in the final ballot document or character names list. The occasional use of the word <reserved> in this draft is an artifact of the production process and should be ignored.

Information about the status of a character proposal in WG2 and UTC as well as other information about the proposal is presented in a marginal note. Where a proposal refers to characters that are not in a single range, the information is repeated as necessary. A series of \$\$\$\$ indicates the presence of a issue that needs to be resolved as part of synchronization. The WG2 document number for all proposals has been provided for reference, as well as the UTC document number.

Note to Reviewers

Please review that this document accurately reflects the decisions taken at meeting M60, and if possible, alert the project and contributing editors to any discrepancies before the ballot is issued.

Despite best efforts there may be minor discrepancies in this document, particularly in terms of this summary and the status information printed in the margins.

Contents

This document lists 7438 characters.

Existing characters from ISO/IEC 10646:2012, for which glyph corrections have been requested are not shown in this summary document, but they will be shown in the ballot documents.

The following list shows all 13 blocks (existing or new) to which characters are proposed to be added, or which have been affected by other changes documented here.

 document: N4282
 font: Uni14400Anatolian
 target: 4th edition

In the names list, most of the comments are in Latin. Those which have a Luwian phonetic value are identified as syllabic. Cross references point from a variant character to the main character which should be used in normalized texts.

A. The human body and clothing
