Proposal to Unicode,

I would like, if it is possible, that Unicode makes Ñ ñ Ñ ñ overposed decomposable letters, provided by Mister Rick McGowan, to be precomposed letters; and to support the public international phonemic alphabet, by using the 37 phonemic letters, for the phones distributed on the 40 phonemic categories for each language, with Microsoft, Apple, IBM, Google, the transphonemation of languages.

Subject: UTC Document Submission with D d comma

From: Cristian Bodor <zhoroscop@yahoo.com>

Date: 9/8/2013 6:01 AM

To: "docsubmit@unicode.org" <docsubmit@unicode.org>

To Unicode,

There is also the precomposed Đ đ, D d with tilde that appear as comma in different font styles, in the international phonemic alphabet the D d comma precomposed letter is the standard if it could be made please, the decomposable letter being D,d;

<http://en.wikipedia.org/wiki/D-comma>

<http://en.wikipedia.org/wiki/Đ>

The Romanian Academy made with Unicode the comma letters Ș ș, Ț ț, the standard; the nonstandard being Ț Ț the letter with cedilla below, Ț Ț the letter with cedilla below that appear as comma in some font styles:

<http://en.wikipedia.org/wiki/S-comma>

<http://en.wikipedia.org/wiki/T-comma>

<http://en.wikipedia.org/wiki/Cedilla>

The public international phonemic alphabet can change the spelling with Unicode.
