

Title: Preliminary proposal for encoding the Medefaidrin (Oberi Okaime) script in the SMP of the UCS

Authors: Andrij Rovenchak, Dafydd Gibbon, Moses Ekpenyong, and Eno-Abasi Urua

Date: 21 April 2015

1. Introduction. The Medefaidrin script was created for an artificial language *Medefaidrin* used by members of an indigenous Christian church Oberi Okaime (Oberi Okaimε, ‘Church freely given’), which was active in the Nigerian province of Calabar in the 1930s near Itu on the Western bank of Cross-River. The authors are, most probably, Michael Ukpōn and Akpan Udōfia. A natural language for them is Ibibio-Efik, which belongs to the Atlantic family of the Niger-Congo languages [Hau 1961; Gibbon et al 2010; Rovenchak & Glavy 2011]. The Medefaidrin script shows a strong influence of the English orthography, in particular, the use of capital and small letters, a special sign for a pronoun “I”.

The community tradition is that the language is a ‘spirit language’ (of which there are other examples in West Africa) revealed to one of the founders of the community in 1927 by divine inspiration: “[...] Bishop Aikeld Ukpōng (alias Michael Ukpōng) on a ‘spiritual board’ visible only to the initiated, after having been taken into seclusion by the Holy Spirit, known as the ‘Seminant’ in Medefaidrin. Since Bishop Aikeld Ukpōng was not literate, it fell on the Secretary of the group, Prophet Jakeld Udofia to transcribe the spiritual writings revealed in a vision to Bishop Ukpōng.” [Gibbon et al. 2010]. According to other sources, the actual date the Holy Spirit descended was 1927, but the language was revealed or impacted in 1932 [Moses Ekpenyong, interview with a consultant from the community, 2015].

Currently the Medefaidrin language has less than 20 adult speakers, is critically threatened and mainly used for saying prayers or meditation of the scriptures.

2. Structure. Medefaidrin is written left to right.

3. Collating order. Collation order is that in the code chart. It is based on the traditional arrangement of letters found in the Medefaidrin instruction materials [Adams 1947; Hau 1961]. Small letters are coded with a shift of 32 (hexadecimal 20), similarly to e.g., Latin or Cyrillic alphabets.

							
<i>m</i>	<i>s</i>	<i>v</i>	<i>w</i>	<i>atiu</i>	<i>z</i>	<i>kp</i>	<i>p</i>
							
<i>t</i>	<i>g</i>	<i>f</i>	<i>i</i>	<i>k</i>	<i>a</i>	<i>j</i>	<i>e</i>
							
<i>b</i>	<i>c</i>	<i>u</i>	<i>yu</i>	<i>l</i>	<i>q</i>	<i>h</i>	<i>ñ</i>
							
<i>x</i>	<i>d</i>	<i>ö</i>	<i>n</i>	<i>r</i>	<i>o</i>	<i>ai</i>	<i>y</i>

4. Character names. The usual UCS conventions are used, with NY representing ñ and OE representing ö. Script-specific ideographs for the first-person singular pronoun (*atiu*, with some distinction in meaning for upper and lower case forms) has the name ATIU.

5. Linebreaking. Letters and digits behave as do the letters and numbers in Latin.

6. Punctuation and digits. In Medefaidrin, a vigesimal (base-20) number system is used, so it requires 20 digits [Hau 1961; Chrisomalis 2010; Rovenchak 2012]. Script-specific punctuation marks are comma and period. Some other marks are given by Adams [1947], including the vocative mark . Encoding of such signs is possible at codepoints which are not yet used in the current proposal 16ECB–16ECF and 16EDB–16EDF.

Digits 0–19 are as follows:

																			
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

Simplified shapes of digits 1, 2, and 3 are used for compound numerals (above 19), cf. Figure 4.

7. Unicode Character Properties.
