

Title: Proposal to encode the Mandombe script

Authors: Andrij Rovenchak, Helma Pasch, Charles Riley, Nandefo Robert Wazi

Date: 14 July 2016

Preliminary proposal N3970 containing introductory information about the Mandombe script and details of character composition was submitted in 2010:

L2/11-053 “Proposal to add the Mandombe Script”

by David Wabeladio, Robert Wazi et Adrien Fwakasumbu

The present document largely incorporates the information given in

L2/15-118 “Preliminary proposal for encoding the Mandombe script in the SMP of the UCS”

by Andrij Rovenchak, Helma Pasch, Charles Riley, Nandefo Robert Wazi

and its revised version [L2/16-077](#)

Revisions address issues raised in [L2/15-312](#) , [L2/15-310](#), and [L2/16-156](#)

1. Introduction. *Mandombe* (), which means “for the Blacks”, is a modern African script which was invented in 1978 by David Wabeladio Payi (*15.07.1957 – †04.04.2013). It is one of very few scripts which were invented south of the equator. It was first designed to write Kikongo and Lingala, the most important languages of Congo, and then developed further so that basically any language can be written with this script.

Unlike other modern African scripts, Mandombe does not imitate the type of letters from the Roman or Arabic alphabets, but the symbols are designed according to strong geometrical rules, on the basis of the stylized cyphers  (2) and  (5), which give the script an outstanding appearance. These shapes are based on the observation of the uncoated portion of the brick wall of the inventor’s room.

From the beginning, the Mandombe script was invented as a medium to write all types of texts, and there are documents of religious nature (see Figs. 1–4) and also secular texts, cf. Figs. 5–8, as well as in occasional public inscriptions (Fig. 9).

The inventor, David Wabeladio Payi was a member of the Kimbanguist church. He was given a professorship at the Kimbanguist University in Kinshasa, where he taught the script to numerous students. On December 22, 2011 he was granted the title Doctor honoris causa at the University of Kinshasa. Former students of Wabeladio teach the script at the Kimbanguist education centers in Kisangani, Brazzaville and Pointe Noire. The script is also taught in the Kimbanguist centers overseas, e.g. Brussels, Paris. There is hope among those who master the script that it will get a communicative function at least within the Kimbanguist church. The number of active Mandombe users is five to six thousand in Africa and a few hundred in diasporas. There are about 500 teachers who are trained by the Centre de l’Ecriture Négro-Africaine (CENA).

Apart from its function as a medium of writing, the Mandombe script is also the basis of graphical design: the letters whose shapes can be combined are used to create fascinating pictures.

There are published texts in and about Mandombe, one of which carries the title, *Mandombe: écriture négro-africaine* [Wabeladio Payi 1996]. It has been suggested that the copyright on at least some of these texts be voluntarily withdrawn, in order to allow for the encoding proposal to go forward in the UTC and with ISO, on the grounds that for implementation to proceed a script cannot be copyrighted. Putting aside the issue of whether the copyright should be withdrawn, it is an open question as to whether a copyright once asserted for a textual work can in fact be withdrawn. The closest that any publisher might be able to achieve in practice is to assign the work a CC0 license.

With respect to statements given on p. 29 of the previous proposal [L2/11-053](#), no requests for funding are currently being made to facilitate future utilization of the Mandombe script.

2. Structure. Mandombe is written left to right. Structurally, the script is an *abugida* or an alphasyllabary. A sign orientation is used as a distinguishing feature. For syllables having a more complex structure than CV a special set of diacritical signs and other marks are used.

3. Collating order. Collation order is that in the code chart. It is based on the arrangement according to letter shapes as given in the original inventor's book [Wabeladio Payi 1996]:

Les MAZITA du 1er groupe sont des Mazita composés des clés du 1er temps ou angle de 0°

 BA	 BE	 BI	 BO	 BU
 DA	 DE	 DI	 DO	 DU
 GA	 GE	 GI	 GO	 GU
 FA	 FE	 FI	 FO	 FU

2. LES MAZITA DU 2ème GROUPE

Les MAZITA du 2ème groupe sont des MAZITA composées des clés du 2ème temps ou angles de 45°

MA 	ME 	MI 	MO 	MU 
KA 	KE 	KI 	KO 	KU 
PA 	PE 	PI 	PO 	PU 
LA 	LE 	LI 	LO 	LU 

Les MAZITA Du 3ème GROUPE

Les MAZITA du 3ème groupe sont des MAZITA composées des clés du 3ème temps ou angles de 90°.

VA 	VE 	VI 	VO 	VU 
---	---	---	---	---

NA 	NE 	NI 	NO 	NU 
TA 	TE 	TI 	TO 	TU 
SA 	SE 	SI 	SO 	SU 

LES MAZITA DU 4ème GROUPE

Les MAZITA du 4ème groupe sont composées des clés du 4ème temps ou angles de 135°.

RA 	RE 	RI 	RO 	RU 
WA 	WE 	WI 	WO 	WU 
ZA 	ZE 	ZI 	ZO 	ZU 
YA 	YE 	YI 	YO 	YU 

This is the main set of characters containing sixteen series.

Afterwards, additional characters follow:

**LES MAZITA MA MAZINDINGA OU
CARACTERES MIGRATOIRES**

-On commence par **PELE-PILUKA** on termine par **NDUNGU**.

 SHA SHE SHI SHO SHU

-Pour les syllabes TSHA, TSHE, TSHI, TSHO, TSHU, on commence par **PAKU-PILUKA** on termine par **KETE**.

 TSHA TSHE TSHI TSHO TSHU

-Pour les syllabes JA, JE, JI, JO, JU, on commence par **NDUNGU-PILUKA** on termine par **PELE**.

 JA JE JI JO JU

-Pour les syllabes DJA, DJE, DJI, DJO, DJU, on commence par **KETE-PILUKA** on termine par **PAKU**.

 DJA DJE DJI DJO DJU

That is, the order is as follows:

B-, D-, G-, F-, M-, K-, P-, L-, V-, N-, T-, S-, R-, W-, Z-, Y-,
 SH-, CH-, J-, DJ-,
 GB-, KP-, KT-.

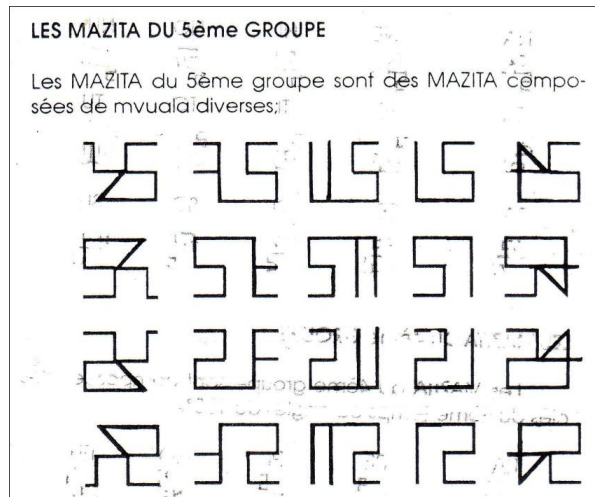

The last set of characters (GB-, KP-, and KT- series) are mentioned in the original inventor's book (note a typo PKA instead of KPA):

**MAZITA MA KIBABA
ou SYLLABES OCCLUSIVES**

Ce sont des Mazita produites par un blocage momentané du canal bucai.
 Par exemple :

<p>GBA</p> 	<p>PKA</p> 
<p>NGBA</p> 	<p>KTO</p> 

Additional characters are used to represent bare vowels, as well as H + <vowel> and <vowel> + H series, in the original book they are allocated in the so-called 5th group:

As the main set of characters contains sixteen rows corresponding to sixteen initial consonants, we suggest using this property in order to facilitate script encoding. Additional seven rows of consonants are then complemented by one row from the 5th group shown above. Further rows from this group are added after 16+7 rows of more complex syllables (prenasalized and containing intervening R or L).

Syllables in Mandombe are composed from a number of basic elements as demonstrated below.

A. Syllables consisting of a single vowel are formed by adding the basic vowel shape to <5>:

a	5 + ㄥ	ㄥ
o	5 + ㄛ	ㄛ

e	5 + ㄷ	ㄷ
u	5 + ㄱ	ㄱ

i	5 + ㄴ	ㄴ
ü	5 + ㄹ	ㄹ

B. Glyphs for syllables are obtained by joining vowel symbols to respective consonants at a certain point only, for instance,

ba	ㄱ + ㄥ	ㄱㄥ
bi	ㄱ + ㄴ	ㄱㄴ
bu	ㄱ + ㄱ	ㄱㄱ
le	ㄷ + ㄷ	ㄷㄷ
lo	ㄷ + ㄷ	ㄷㄷ

da	ㄥ + ㄱ	ㄥㄱ
di	ㄴ + ㄱ	ㄴㄱ
du	ㄹ + ㄱ	ㄹㄱ
pe	ㄷ + ㄷ	ㄷㄷ
po	ㄷ + ㄷ	ㄷㄷ

C. More complex syllables (containing diphthongs, pre- and post-nasalization as well as intervening R or L) are formed in the following fashion:

lua	ㄏ + ㄨ + ㄌ	ㄏㄨㄌ	yea	ㄩ + ㄝ	ㄩㄝ	bea	ㄅ + ㄝ	ㄅㄝ	pro	ㄆ + ㄛ + ㄛ	ㄆㄛㄛ
gue	ㄍ + ㄨ + ㄝ	ㄍㄨㄝ	nie	ㄋ + ㄩ	ㄋㄩ	dea	ㄉ + ㄝ	ㄉㄝ	plo	ㄆ + ㄛ + ㄛ	ㄆㄛㄛ
sio	ㄕ + ㄨ + ㄛ	ㄕㄨㄛ	kio	ㄎ + ㄩ	ㄎㄩ	vai	ㄎ + ㄩ	ㄎㄩ	dri	ㄉ + ㄩ + ㄩ	ㄉㄩㄩ
muo	ㄇ + ㄨ + ㄛ	ㄇㄨㄛ	tuo	ㄊ + ㄨ	ㄊㄨ	kei	ㄎ + ㄩ	ㄎㄩ	nso	ㄋ + ㄛ + ㄛ	ㄋㄛㄛ
bon	ㄅ + ㄛ + ㄛ	ㄅㄛㄛ	tau	ㄊ + ㄨ	ㄊㄨ	nkou	ㄋ + ㄛ + ㄛ	ㄋㄛㄛ	mbi	ㄇ + ㄨ + ㄩ	ㄇㄨㄩ

Note that the position of a combining mark is defined by the orientation of the vowel in the syllable. Some more examples of nasalized syllables, including diphthongs, are shown below:

ㄌㄨㄢ. ㄉㄨㄢ. ㄆㄢ. ㄕㄨㄢ.	lun dun pan simon
ㄍㄨㄢ. ㄕㄨㄢ. ㄆㄨㄢ. ㄩㄢ.	fin kiun feun yeun
ㄌㄨㄢ	luan

Two additional marks are used to represent apostrophe and high-tone vowels (the latter is optional):

NTENTIA (APOSTROPHE)

Exemple :
N'SITA N'SELE

N'KAMBA N SAMU

NINGU A ZULU NINGU A NSI ET LE KIMEME
LES TONS ASCENDANTS , DESCENDANTS ET PROLONGES

Homme (Moto) Feu (Moto)

Note low-tone *moto* ('man') versus high-tone *móto* ('fire'), the tonal mark is encircled in red. As with the combining marks for diphthongs and nasalization, the position of an acute accent mark is defined by the orientation of the vowel in the syllable:

má	fé	wí	gú
			

4. Character names. The usual UCS conventions are used, with SH representing /ʃ/, CH representing /tʃ/, DJ representing /dʒ/, and UE representing the round front vowel /y/ (French <u> or German <ü>).

According to the recommendation given in [L2/15-204](#), we have changed the encoding model with syllable units being encoded instead of their elements. The names of such characters is

MANDOMBE SYLLABLE ...

Diacritical marks used to denote diphthongs are encoded separately to reduce the total number of proposed characters. The following are the names of these marks:

MANDOMBE COMBINING A DIPHTHONG MARK
 MANDOMBE COMBINING A DIPHTHONG MARK FLIPPED

...

After Mandombe was initially used only to write Lingala and Kikongo, i.e. CVCV languages, the “joined” addition became necessary. It provides shapes for consonants in syllable coda (as opposed to syllable-initial consonants), which are useful for writing languages other than Kikongo or Lingala, e.g., for Wolof. For those syllable-final shapes the following names is suggested:

MANDOMBE CONSONANT B
 MANDOMBE CONSONANT D

...

Here are the Mandombe characters for bare consonants:

They are given in the following order, used below as the collation order:
 B, D, G, F; M, K, P, L; V, N, T, S; R, W, Z, Y; SH, CH, J, DJ

Note that some shapes can be used for syllable-initial foreign sounds (like the labio-velar plosives GB, and KP).

The sample of text in Wolof with final consonants in some words is shown in Fig. 4.

The total number of characters in the proposal is 1050.

5. Linebreaking. Linebreak can occur after a punctuation sign, including syllable separator and word separator. Characters forming a syllable cannot be broken.

6. Punctuation and digits. In Mandombe, script-specific punctuation is used, including a syllable separator, which is a blank space, and a word separator, which is a dot resting on the baseline.

While certain punctuation marks have arrow shapes (see p. 20), it does not seem feasible to use the existing arrows for these purposes. The proposed characters are an integral part of the writing system and should be kept in the same block and other Mandombe characters. Due to peculiarities of character placement in Mandombe, using a separate set of arrow symbols will facilitate the font processing.

Of ten Mandombe digits, five have the shape similar to vowels (I = 1, U = 2, E = 3, O ≈ 4, A = 5). {NB: this order can be an alternative for ordering vowels, instead of the A-E-I-O-U one}.

However, it seems that the vowels and digits require separate codepoints as – at least in some texts – the digits are taller than the respective vowels when resting on the baseline (see Fig. 1).

7. Additions and extensions. Possible additions include calendar characters for a recently devised Kimbanguist calendar (7 symbols for days of week and 12 symbols for combining days of week and months); such calendar characters can be named starting with KIMBANGUMUNA, not MANDOMBE.

There is a potential possibility that other symbols to reflect phonology of some other African languages will be introduced in future (tone marks, letters for click consonants, etc.), and they can be placed in the reserved codepoints.

8. Acknowledgement. This project was partly supported by a grant from the United States National Endowment for the Humanities (PR-50205-15), which funds the Universal Scripts Project (part of the Script Encoding Initiative at the University of California, Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of the National Endowment for the Humanities.
