Tamil Symbols: Comment on L2/16-062

Dr. N. Ganesan (naa.ganesan@gmail.com)

Section 1.0

(A) Character Names: 11FFF – AAVANAMUTRU (in L2/16-062)

Since there is no T in Tamil name, please use:
11FFF – AAVANAMURRU

(B) 11FD8 – CHEVIDU (in L2/16-062) – Voiced letter D is not in Tamil script.

Hence, to be consistent with all other names in the chart, please use:
11FD8 - CHEVITU

Section 2.0

For a question raised in the Unicode members' list as to whether annotations other than ASCII is possible, for example India's major scripts, the answer was it is not possible.

> The restriction on character repertoire for annotations in the
> NamesList.txt file (which provides the input to the unibook
> application that drives the code chart formatting) is a documented
> limitation of the tooling. See:
>
> http://www.unicode.org/Public/UCD/latest/ucd/NamesList.html

Hence, the annotations in Tamil script, which are the character names themselves, need to be removed.
