

Proposed Changes to kRSUnicode and kRSKangXi Values

John H. Jenkins

12 April 2017

We have received an erratum from one Eiso Chan (eisoch@126.com) to the effect that U+7352, U+7353, and U+7354 should have kRSUnicode and kRSKangXi values of 94.11, not 94.9.

The relevant glyphs in the code chart are:

7352 犬 94.11	獒 G0-6961	獒 HB2-E676	獒 T2-517E	獒 J14-704F	獒 K0-6823	獒 V1-5E73
7353 犬 94.9	獒 G3-4450	獒 T3-4778				
7354 犬 94.11	獒 GE-332B	獒 T3-477A				

The characters in question clearly have eleven residual strokes (and both U+7351 and U+7354 have a kRSUnicode value of 9.11).

My recommendation is that we go ahead and make the changes.
