

Hi

I have a proposal to add four new Arabic characters in Unicode.

All characters are frequently use in [Balochi language](#).

But they are not existing in Unicode chart.

Balochi publishers and font developers use Specific software such Urdu inpage or fonts like “ balochi Nastalik” to write Balochi with correct orthography.

I think, no need more explanation with words, so I have tried to draw these characters. I modified Arial fonts to help your team and also attached official publishing font Balochi Nastalik.

Regard

Qazi Rehan, Font developer and Balochi writer

1: iybalochi-arab

Name: iybalochi / yeh hamza above with Arabic kasra

Ligature Grouping:

yehhamzaabove_arabickasracomb_yehbarree-arab

Nearby character: ے

Outline in Arial (Modified for Balochi)

Outline in Balochi Nastalik

The image shows a digital character information card. At the top, the Arabic letter 'Yeh Barree with Hamza Above' is displayed in a large, dark blue font. Below the character is a red button with the text 'Copy'. Underneath the button, the text 'Arabic Letter Yeh Barree with Hamza Above' is written in a smaller, black font. Below this, the 'Unicode number' is listed as 'U+06D3' and the 'HTML-code' is listed as 'ۓ'. The card is set against a background of a keyboard.

Copy

Arabic Letter Yeh Barree
with Hamza Above

Unicode number: U+06D3

HTML-code: ۓ
