

**Title:** Proposal for new provisional Unihan Database property: **kStrange**

**Author:** Ken Lunde

**Date:** 2019-12-14

Having been inspired by [L2/19-346](#), *On Encoding Policy of Gongche Notations and Upcoming Para-ideographs*, this document serves as a proposal to add a new provisional Unihan Database property tentatively designated *kStrange*. This property is intended to identify Han ideographs that are considered “strange” in one or more ways, and specifies 12 fairly distinct categories. The 12 sections that begin on the next page correspond to each of the 12 categories, and provide the Han ideographs that are tentatively assigned to each category. Below is a summary listing of the 12 categories, their single-letter abbreviations, and their names:

- Category A     **[A]**symmetric
- Category B     **[B]**opomofo
- Category C     **[C]**ursive
- Category F     **[F]**ully-reflective
- Category H     **[H]**angul Component
- Category I     **[I]**ncomplete
- Category K     **[K]**atakana Component
- Category M     **[M]**irrored
- Category O     **[O]**dd Component
- Category R     **[R]**otated
- Category S     **[S]**troke-heavy
- Category U     **[U]**nusual Arrangement/Structure

Han ideographs that are assigned to more than one category have their “Code Point” and “Ideograph” cells cyan-filled. In the proposed data, the maximum number of categories to which a Han ideograph is assigned is two. A total of 691 unique Han ideographs are covered.

## Data File

The *kstrange-data.txt* data file (PDF attachment) provides everything that is necessary for the Unihan Database, and for adding the property to [UAX #38](#), *Unicode Han Database (Unihan)*.

## Representative Glyphs & Code Chart Excerpts

The representative glyphs in the “Ideograph” and “Reference” columns, along with those in the “Bopomofo” and “Katakana” columns, are from the [Hanazono Mincho](#) (花園明朝) fonts, specifically the [OpenType/CFF versions](#): *HanaMinA.otf* (BMP), *HanaMinB.otf* (Extension B), and *HanaMinC.otf* (Extensions C through F). Extension G representative glyphs are not included (their “Ideograph” cells are filled green), except for a very small number whose representative glyphs are from [Source Han Sans](#).

The code chart excerpts are based on those for the [Unicode Version 13.0 BETA](#), and those for Extension G are highlighted in yellow.

## Category A—[A]symmetric

Han ideographs with this property value exhibit a structure that appears to be asymmetric.

Block	Code Point	Ideograph	Code Chart Excerpt

## Category B—[B]opomofo

Han ideographs with this property value visually resemble a bopomofo character (common Han ideographs and radicals that resemble a bopomofo character, such as 一 (U+4E00) versus 一 (U+3127), have been explicitly excluded). In addition to being tagged with the letter “B,” the code point for the corresponding bopomofo character is also specified.

## Category F—[F]ully-reflective

Han ideographs with this property value are fully-reflective or include components that are fully-reflective, meaning that the mirrored and unmirrored components are arranged side-by-side or stacked top-and-bottom. In addition to being tagged with the letter “F,” the code point for the corresponding unreflected Han ideograph, if any and shown in the “Reference” column, is also specified.

## Category I—[I]ncomplete

Han ideographs with this property value appear to be incomplete versions of an existing or possible ideograph (meaning that one or more components appear to be incomplete), without regard to semantics. In addition to being tagged with the letter “I,” the code points for the corresponding complete Han ideographs, if any and shown in the “Reference” column, are also specified.

- 1 An abbreviated form that means “library” (トショカン, which is the reading of 図書館).
- 2 An abbreviated form that means “truck” (トラック).
- 3 An abbreviated form that means “cutter” (カッター), as in a type of ship.

## Category M—[M]irrored

Han ideographs with this property value are either mirrored or include one or more components that are mirrored. In addition to being tagged with the letter “M,” the code point for the corresponding unmirrored Han ideograph, if any and shown in the “Reference” column, is also specified.

Block	Code Point	Ideograph	Reference	Code Chart Excerpt

- 1 If Japan were to horizontally-extend this Han ideograph with [JMJ-030425](#) as its source reference, the two 丿 components would be rendered as 丶 components, hence its assignment to this category.
- 2 U+0292 𠄎 LATIN SMALL LETTER EZH is the symbol for “dram,” and this Han ideograph carries the same meaning.
- 3 U+2125 𠄎 OUNCE SIGN is the symbol for “ounce,” and this Han ideograph carries the same meaning.

## Category R—[R]otated

Han ideographs with this property value are either rotated or include one or more components that are rotated. In addition to being tagged with the letter “R,” the code point for the corresponding unrotated Han ideograph, if any and shown in the “Reference” column, is also specified.

1 U+304B2 𠄎或或 (Extension G) is the equivalent Han ideograph without a rotated component.

## Category S—[S]troke-heavy

Han ideographs with this property value have 40 or more strokes, covering 22 Han ideographs. If this threshold were to be decreased to 35 or 30 strokes, the number of Han ideographs with this property value would increase to 71 or 336, respectively. In addition to being tagged with the letter “S,” the *kTotalStrokes* value is also specified.

## Category U—[U]nusual Arrangement/Structure

Han ideographs with this property value have an unusual structure or component arrangement. This includes clusters of four or more identical elements (while 叒/叕/叕/叕/𠄎/𠄎/𠄎/𠄎 as stand-alone ideographs are considered unusual, their use as components of other ideographs is not), along with three identical elements in a row arranged horizontally or vertically.
