

**Title:** UAX #45 Data Issues in Unicode 14.0

**Author:** William T. Nelson

**Date:** 2022-01-10

I propose revisions to data for 32 ideographs as described below.

## IDS Corrections

Identifier	Glyph	Current IDS	Proposed IDS
UTC-00006	𠄎	𠄎乙丙	𠄎乚丙
UTC-00116	𠄎	𠄎穴𠄎肉缶	𠄎穴缶
UTC-00181	𠄎	𠄎簷大	𠄎筍大
UTC-00193	𠄎	𠄎虫戌	𠄎虫戌
UTC-00220	𠄎	𠄎𠄎食人	𠄎𠄎飮 or 𠄎𠄎食人

## Duplicate Yue Character

UTC-00345 and UTC-00443 both have IDS 𠄎月枕。In Unicode 13, their glyphs were identical. But UTC-00345 is assigned radical meat and UTC-00443 radical moon, so in Unicode 14, the glyph for UTC-00345 was changed to reflect H-style radical meat.

Based on the available evidence, the radical assignment for UTC-00443 is questionable. UTC-00345 is present in IRG Working Set 2021 with [serial number 03235](#). The evidence from Cheung & Bauer gives reading "zam2" and definition "callous." For UTC-00443, the UAX #45 [data file](#) indicates that the evidence from Cowles gives reading "zam2" and definition "callous."

Given the identical semantics, UTC-00443 appears to be a duplicate of UTC-00345. The status for UTC-00443 can be changed from N to UTC-00345 and its radical-stroke count can be changed to 130.8.

𠄎	𠄎
UTC-00345	UTC-00443

## Stale Status N

The other 26 entries with status N were not included in the [UTC's submission for IRG Working Set 2021](#) due to insufficient evidence of usage. The status for these entries can be changed to status X.
