Doc Type: Working Group Document

Title: Proposal to add one character used for Cantonese particle to UAX #45

Source: Ying-yu Ng

Status: Individual Contribution Action: For consideration by UTC

Date: 2024-03-16

This document includes only one character which is used for Cantonese grammatical particle to UAX #45 for the coming UTC submission for the next IRG WS.

1. Proposal

The following table shows the information for submitted character.

Glyph	IDS	RS	TS	FS	Traditional form	Cantonese
以	□□紧	30.10	13	2	U+21075 噄	gan2

2. Brief introduction

In Cantonese, \mathbb{R} or \mathbb{R} (gan2) is a grammatical particle placed after a verb to express progressive aspect. It is very similar to the *-ing* from continuous tense in English.

3. Evidence

The pieces of evidence used in this document are cited from the same book, the source information of the book is shown as below.
