L2/24-174

Unicode request for Turkish and Arabic accidentals

Gavin Jared Bala, gavin.jared@gmail.com
Kirk Miller, kirk.miller@gmail.com

2024 July 05

This request is for accidentals used in the notation of Turkish and Arabic music. It is related to L2/20-159, which requested the accidentals used in Persian music.

Characters

Turkish and Arabic accidentals

𝄬 1D256 MUSICAL SYMBOL FLAT WITH STROKE [SMuFL U+E442 and U+ED33.]

Background

Turkish classical music (*Türk sanat müziği*) commonly uses a set of accidental symbols for microtones. The most usual notation (and the only one in SMuFL, the Standard Music Font Layout, which assigns many musical symbols to the Private Use Area) is based on conventions designed by Suphi Ezgi (1869–1962) and Sadettin Arel (1880–1955) (Signell 1986).

In the system of Arel, Ezgi, and Salih Murat Uzdilek (1891–1967), a chain of 24 acoustically pure fifths is said to provide the gamut of tones. Since 31/53 of an octave is almost exactly an acoustically pure perfect fifth, 53-tone equal temperament is often used as a model for Turkish music, according to which the octave is divided into 53 equal parts (commas), and a whole tone is made of 9 such parts (Yarman 2008). Neither of these theoretical systems perfectly reflect the actual intonation of the intervals of Turkish classical music *in practice*, which can vary significantly from these theoretical values (Yarman 2008), but nonetheless the accidentals used in this system constitute the "official notation system in circulation today" (comment by Yarman in Anon. 2015), and they are the accidentals supported in SMuFL (section 4.35) and the Turkish Mus2 notation software package.

The following list contains the comma and the intervals that, according to the theory, can occur within scales (Signell 1986):

Interval	**Commas**	**Accidental (up)**	**Accidental (down)**
Comma *Koma*	1		
Small half-tone *Bakiye*	4		
Large half-tone *Kücük mücenneb*	5		
Small whole-tone *Büyük mücenneb*	8		
Large whole-tone *Tanini*	9		
Augmented second *Artık ikili*	12	None	None

Four of these symbols are the normal accidentals (sharp, flat, double-sharp, and double-flat), and two more (the symbols for sharpening and flattening by a *koma*) are already part of the Stein-Zimmermann quarter-tone accidentals, requested in a previous proposal. That leaves four missing symbols to request: the *bakiye* flat, the *kücük mücenneb* sharp, and the *büyük mücenneb* sharp and flat.

Turkish folk music (*Türk Halk Müziği*) uses a different system of accidentals, in which sharps and flats are annotated with superscript digits to count the number of commas (Karaosmanoğlu 2012). This system is also supported by SMuFL (section 4.36) and Mus2. We do not propose these because they can be decomposed, viz.: $\sharp^1$, $\sharp^2$, $\sharp^3$, $\sharp^5$, $\flat^1$, $\flat^2$, $\flat^3$, and $\flat^4$ (see Fig. 15).

Arabic accidentals use a different notation system for quarter-tones. SMuFL (section 4.116) presents a set of Arabic accidentals, made of the normal accidentals, the Stein-Zimmermann quarter-tone sharps, the flat-with-stroke for a quarter-tone flat (one of the accidentals mentioned above Turkish music), and a flat preceded by a vertical bar for three quarter-tone flat. Like the Stein-Zimmermann quarter-tone sharp, the Arabic quarter-tone sharp may also use a glyph variant with only one horizontal bar. These were added in response to a proposal by Karim Ratib: see Spreadbury (2016). The three quarter-tone flat is the only additional missing symbol.

On character unification

In SMuFL, the Western sharp and flat are re-encoded as Turkish accidentals, and all the normal Western accidentals (double-flat, flat, natural, sharp, and double-sharp) are re-encoded as Arabic accidentals. This was at the request of members of the user community (Spreadbury 2016), on the grounds that the Arabic, Persian, and Turkish traditions are related but not identical and that they, along with European microtonal systems, come with different implications. However, SMuFL has a different policy on character unification than Unicode, and its mass creation of duplicate characters does not fit Unicode specifications. In VexFlow, the proposed Turkish and Arabic accidentals are not unified with each other, but the normal Western accidentals are unified and the Arabic quarter-sharps are unified with Stein-Zimmermann (https://github.com/0xfe/vexflow/wiki/Microtonal-Support).

As a comparable case, we note that the Western accidentals are widely used with different implications and understandings when discussing alternate tunings. For example, the sharp ♯ is often used to mean “seven perfect fifths, octave-reduced” in a generalisation of its meaning in meantone temperaments. In historical music notation, the ♯ was used differently,

often with ♯ and ♭ contradicting each other, and use by Jean-Marie Leclair (1697–1764) was still more idiosyncratic (Arnold, pp. 884–886). Since ⟨♯⟩ is widely recognised as the same symbol regardless, and given the precedent of how only the specific Persian accidentals are encoded for that tradition even though they are used alongside the Western flat, natural, and sharp (L2/20-159), we think that the model of encoding only graphically distinct characters is likely to be more suitable for Unicode.

Fig. 1. Names of the notes of Turkish music, from http://web.archive.org/web/20170823051525/http://www.oud.eclipse.co.uk/turkishnotes.html.

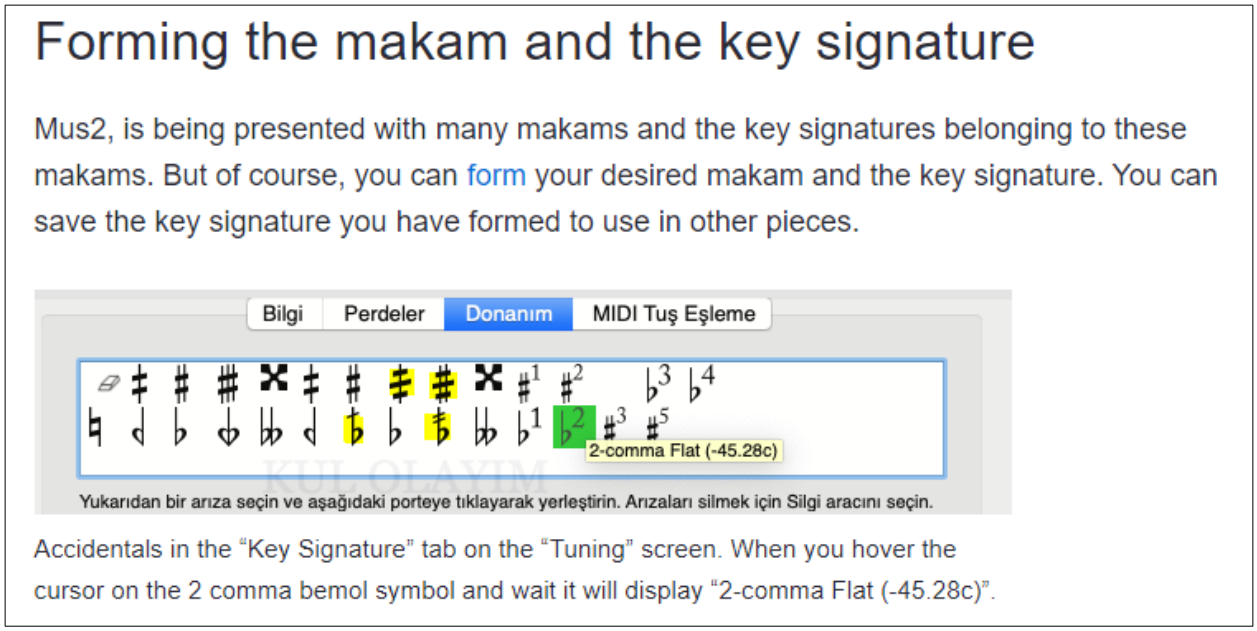

Fig. 2. From the website of the Mus2 notation software package (https://mus2.com.tr/en/general-information/the-first-and-the-only-music-notation-program-of-turkey-mus2/), showing the available Turkish art music and folk music accidentals (only the former requested), as well as the Stein-Zimmermann accidentals.

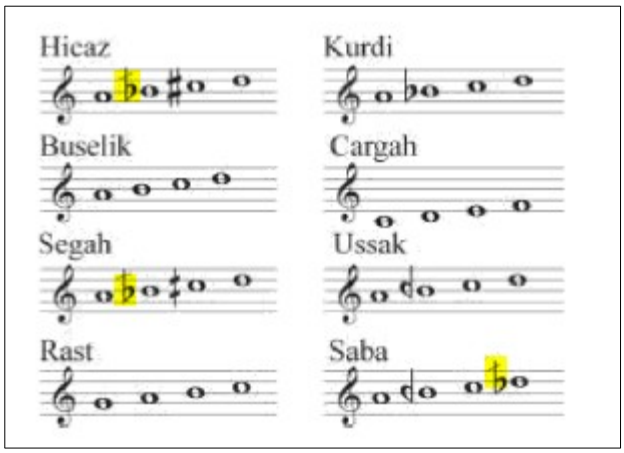

Fig. 3. Kalin S. Kirilov, *Bulgarian Harmony* (Routledge 2016), Ex. 3.6a. Tetrachords used to construct Turkish makams.

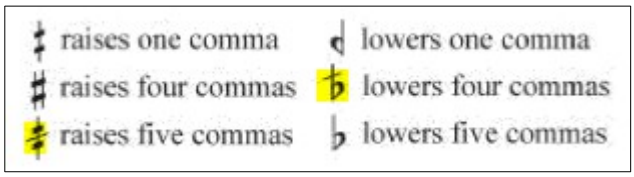

Fig. 4. Ibid, Ex. 3.7. The Ezgi-Arel accidentals used for Turkish music (except for the *büyük mücenneb* sharp and flat).

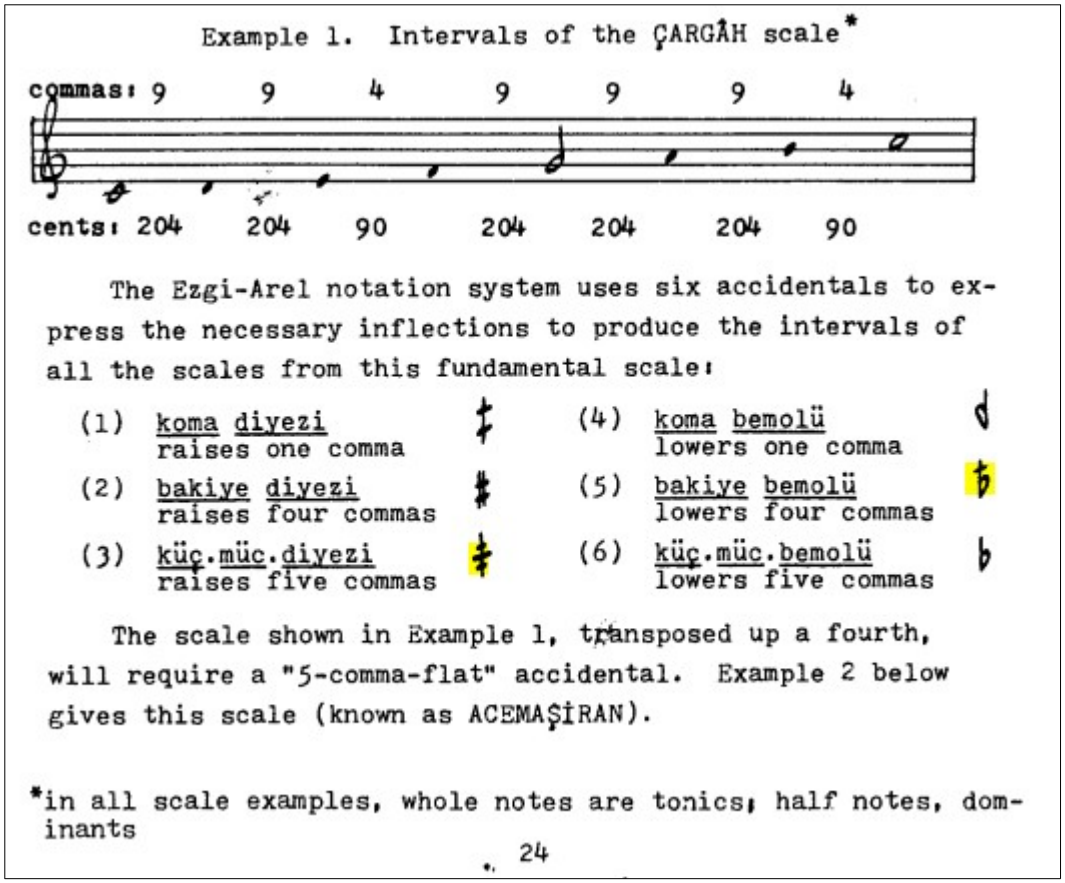


Example 1. Intervals of the ÇARGÂH scale*

commas: 9 9 4 9 9 9 4

cents: 204 204 90 204 204 204 90

The Ezgi-Arel notation system uses six accidentals to express the necessary inflections to produce the intervals of all the scales from this fundamental scale:

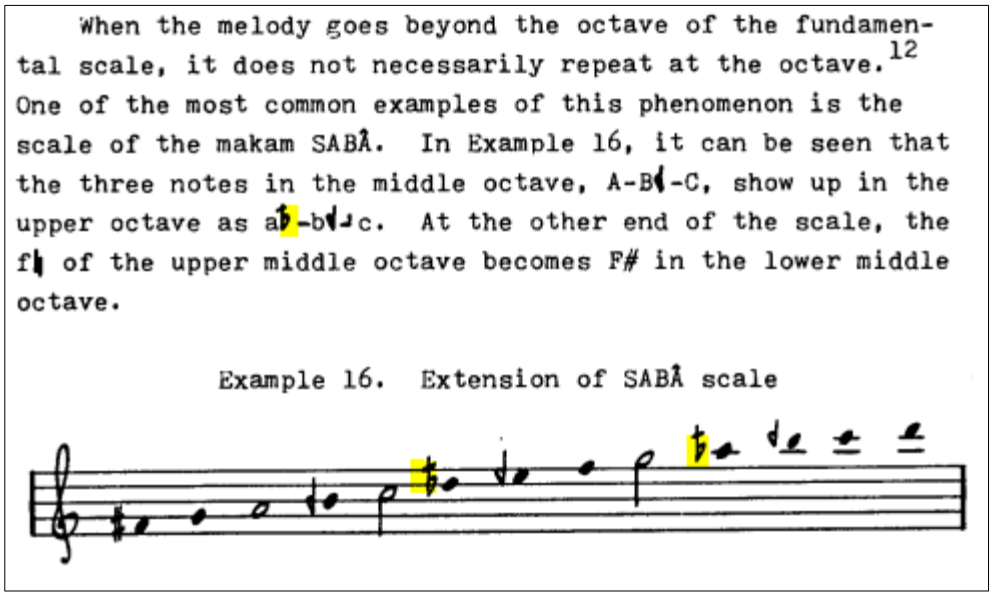
(1) koma diyezi — raises one comma
(2) bakiye diyezi — raises four commas
(3) küç.müc.diyezi — raises five commas
(4) koma bemolü — lowers one comma
(5) bakiye bemolü — lowers four commas
(6) küç.müc.bemolü — lowers five commas

The scale shown in Example 1, transposed up a fourth, will require a "5-comma-flat" accidental. Example 2 below gives this scale (known as ACEMAŞİRAN).

*in all scale examples, whole notes are tonics; half notes, dominants

24

Fig. 5. Signell (1986), p. 24. The Ezgi-Arel accidentals used for Turkish music (except for the *büyük mücenneb* sharp and flat).



When the melody goes beyond the octave of the fundamental scale, it does not necessarily repeat at the octave.[12] One of the most common examples of this phenomenon is the scale of the makam SABÂ. In Example 16, it can be seen that the three notes in the middle octave, A-B♭-C, show up in the upper octave as a♭-b♭-c. At the other end of the scale, the f♮ of the upper middle octave becomes F# in the lower middle octave.

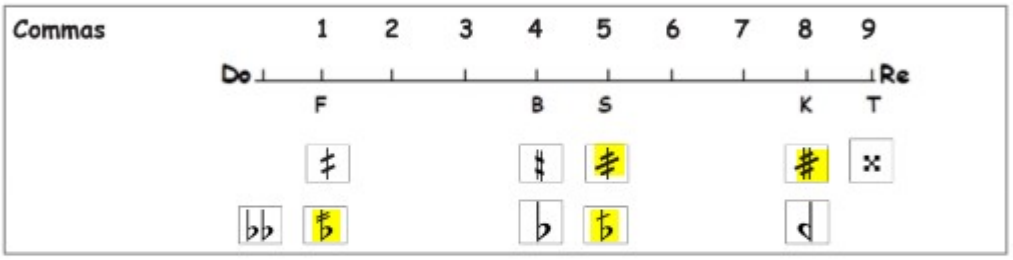
Example 16. Extension of SABÂ scale

Fig. 6. Ibid, p. 44.

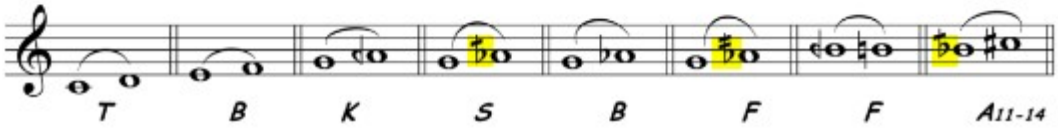
Fig. 7. From *Çârgâh Peşrev*, Osman Bey (1825?–1900?). From the *Neyzen Sheet Music Archive*, https://www.neyzen.com/nota_arsivi/02_klasik_eserler/019_cargah/cargah_pesrev_osman_bey_tanburi_kucuk.pdf.

Fig. 8. From *Karçiğar Peşrev*, Fârâbi (870–950). From the *Neyzen Sheet Music Archive*, https://www.neyzen.com/nota_arsivi/02_klasik_eserler/050_karcigar/karcigar_p_farabi.pdf. The flat-with-stroke used both as an accidental and within the key signature.

Today, intervals are used in Turkish music education according to the theory of AEU. The do-re tanini interval divided into nine equal parts is shown below on a line. Nicknames, flat and sharp signs are written in the places corresponding to 1, 4, 5, 8, 9 coma values.



When we express Turkish music intervals with notes, we can give the following examples:



We would like to point out that the flat and sharp signs of Büyük Mücenneb and the sharp sign of Koma are not used in the performance, but only in the calculation of the tetrachords and pentachords that compose the makams.

The flat and sharp sembols, values and name of Turkish music intervals are shown in the table below.

Name of Interval	Value of Interval	Sembol of Interval	Sharp Sembols	Flat Sembols
Fazla	1	F		
Bakiye	4	B		
Mücenneb-i Sagîr	5	S		
Mücenneb-i Kebîr	8	K		
Tanini	9	T		
Artık İkili	12	A_{12}	------ no ----	------ no ----

ISO/IEC JTC 1/SC 2/WG 2

PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC 10646[1]

Please fill all the sections A, B and C below.

Please read Principles and Procedures Document (P & P) from std.dkuug.dk/JTC1/SC2/WG2/docs/principles.html for guidelines and details before filling this form.

Please ensure you are using the latest Form from std.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html.

See also std.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html for latest *Roadmaps*.

A. Administrative

1. **Title:** *Unicode request for Turkish and Arabic accidentals*
2. Requester's name: *Gavin Jared Bala, Kirk Miller*
3. Requester type (Member body/Liaison/Individual contribution): *individual*
4. Submission date: *2024 July 05*
5. Requester's reference (if applicable):
6. Choose one of the following:
   - This is a complete proposal: *yes*
   - (or) More information will be provided later:

B. Technical – General

1. Choose one of the following:
   - a. This proposal is for a new script (set of characters): *no*
     - Proposed name of script:
   - b. The proposal is for addition of character(s) to an existing block: *yes*
     - Name of the existing block: *Musical Symbols Supplement*
2. Number of characters in proposal: *5*
3. Proposed category (select one from below - see section 2.2 of P&P document):

A-Contemporary	x	B.1-Specialized (small collection)		B.2-Specialized (large collection)	
C-Major extinct		D-Attested extinct		E-Minor extinct	
F-Archaic Hieroglyphic or Ideographic				G-Obscure or questionable usage symbols	

4. Is a repertoire including character names provided? *yes*
   - a. If YES, are the names in accordance with the "character naming guidelines" in Annex L of P&P document? *yes*
   - b. Are the character shapes attached in a legible form suitable for review? *yes*
5. Fonts related:
   - a. Who will provide the appropriate computerized font to the Project Editor of 10646 for publishing the standard? *Kirk Miller*
   - b. Identify the party granting a license for use of the font by the editors (include address, e-mail, ftp-site, etc.): *SIL (Gentium release)*
6. References:
   - a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? *yes*
   - b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached? *yes*
7. Special encoding issues:
   - Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)? *no*

8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at www.unicode.org for such information on other scripts. Also see Unicode Character Database

1. Form number: N4502-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05, 2009-11, 2011-03, 2012-01)

(www.unicode.org/reports/tr44/) and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? *no*
   If YES explain
2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? *no*
   If YES, with whom? *we followed implementations (Mus2, SMuFL, vexflow) which did*
   If YES, available relevant documents: *i.a. comments from Ozan Yarman and Karim Ratib; see figures*
3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? *yes*
   Reference:
4. The context of use for the proposed characters (type of use; common or rare) *music*
   Reference:
5. Are the proposed characters in current use by the user community? *yes*
   If YES, where? Reference: *See figures*
6. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP? *no*
   If YES, is a rationale provided?
   If YES, reference:
7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)? *yes*
8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? *no*
   If YES, is a rationale for its inclusion provided?
   If YES, reference:
9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters? *no*
   If YES, is a rationale for its inclusion provided?
   If YES, reference:
10. Can any of the proposed character(s) be considered to be similar (in appearance or function) to, or could be confused with, an existing character? *no*
    If YES, is a rationale for its inclusion provided?
    If YES, reference:
11. Does the proposal include use of combining characters and/or use of composite sequences? *no*
    If YES, is a rationale for such use provided?
    If YES, reference:
    Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?
    If YES, reference:
12. Does the proposal contain characters with any special properties such as control function or similar semantics? *no*
    If YES, describe in detail (include attachment if necessary)
13. Does the proposal contain any Ideographic compatibility characters? *no*
    If YES, are the equivalent corresponding unified ideographic characters identified?
    If YES, reference:
