2000	SIP AND TIP	20000-2FFFFD 30000-3FFFFD
3000	SSP	E0000-EFFFFD

The following specify collections which are the union of particular collections defined above.

63	ALPHABETIC PRESENTATION FORMS	Collections 104-105
250	GENERAL FORMAT CHARACTERS	Collections 200-203
251	SCRIPT-SPECIFIC FORMAT CHARACTERS	Collections 204-206
4000	UCS PART-2	Collections 1000, 2000, 3000

NOTE 2 Collections numbered 57, 58, and 59 were specified in the First Edition of ISO/IEC 10646-1 but have now been deleted. Collections numbered 400 and 500 were specified in the First and Second Editions of ISO/IEC 10646-1 but have now been deleted. The collection numbered 271 was specified in the first edition of this document but has now been deleted.

NOTE 3 The principal terms (keywords) used in the collection names shown above are listed below in alphabetical order. The entry for a term shows the collection number of every collection whose name includes the term. These terms do not provide a complete cross-reference to all the collections where characters sharing a particular attribute, such as script name, may be found. Although most of the terms identify an attribute of the characters within the collection, some characters that possess that attribute may be present in other collections whose numbers do not appear in the entry for that term.

A.2.3 Blocks in the SIP

The following blocks are specified in the Supplementary Ideographic Plane. They are ordered by code point.

<u>Block name</u>	<u>from</u> <u>to</u>
CJK UNIFIED IDEOGRAPHS EXTENSION B	20000-2A6DF
CJK UNIFIED IDEOGRAPHS EXTENSION C	2A700-2B73F
CJK UNIFIED IDEOGRAPHS EXTENSION D	2B740-2B81F
CJK UNIFIED IDEOGRAPHS EXTENSION E	2B820-2CEAF
CJK UNIFIED IDEOGRAPHS EXTENSION F	2CEB0-2EBEF
CJK UNIFIED IDEOGRAPHS EXTENSION I	2EBF0-2EE5F
CJK COMPATIBILITY IDEOGRAPHS SUPPLEMENT	2F800-2FA1F

A.2.4 Blocks in the TIP

The following block is specified in the Tertiary Ideographic Plane.

<u>Block name</u>	<u>from</u> <u>to</u>
CJK UNIFIED IDEOGRAPHS EXTENSION G	30000-3134F
CJK UNIFIED IDEOGRAPHS EXTENSION H	31350-323AF
CJK UNIFIED IDEOGRAPHS EXTENSION J	323B0-3347F

A.2.5 Blocks in the SSP

The following blocks are specified in the Supplementary Special-purpose Plane. They are ordered by code point.

<u>Block name</u>	<u>from</u> <u>to</u>
TAGS	E0000-E007F
VARIATION SELECTORS SUPPLEMENT	E0100-E01EF

A.3 Fixed collections of the whole UCS (except Unicode collections)

A.3.1 General

The following fixed collections (see 3.26) contain the whole UCS assigned character content as it was when they were created. The Unicode collections are described in A.6.

A.3.2 301 BMP-AMD.7

The fixed collection 301 BMP-AMD.7 is specified below. It comprises only those coded characters that were in the BMP after amendments up to, but not after, AMD.7 were applied to the First Edition of ISO/IEC 10646-1. Accordingly, the repertoire of this collection is not subject to change if new characters are added to the BMP by any subsequent amendments.

301 BMP-AMD.7 is specified by the following ranges of code points as indicated for each row or contiguous series of rows.

Plane 00

<u>Row</u>	<u>Values within row</u>

A.3.3 299 BMP FIRST EDITION

The fixed collection 299 BMP FIRST EDITION has been reserved to identify all of the coded characters that were in the BMP in the First Edition of ISO/IEC 10646-1. This collection is not now in conformity with this document.

NOTE The specification of collection 299 BMP FIRST EDITION consisted of the specification of collection 301 BMP-AMD.7 except for the replacement of the corresponding entries in the list above with the entries shown below:

Row	Values within row
05	31-56 59-5F 61-87 89 B0-B9 BB-C3 D0-EA F0-F4
0F	[no values]
1E	00-9A A0-F9
20	00-2E 30-46 6A-70 74-8E A0-AA D0-E1
AC-D7	[no values]

and by including an additional entry:

Row	Values within row
34-4D	3400-4DFF

for the code point values of three collections (57, 58, 59) of coded characters which have been deleted from this document since the First Edition of ISO/IEC 10646-1.

A.3.4 302 BMP SECOND EDITION

The fixed collection 302 BMP SECOND EDITION comprises only those coded characters that are in the BMP in the Second Edition of ISO/IEC 10646-1. The repertoire of this collection is not subject to change if new characters are added to the BMP by any subsequent amendments.

302 BMP SECOND EDITION is specified by the following ranges of code points as indicated for each row or contiguous series of rows.

Plane 00

A.4 CJK collections**A.4.1 370 IICORE**

The fixed collection 370 IICORE is the International Core subset of the CJK UNIFIED IDEOGRAPHS-2001 collection.

NOTE Given its large size (9 810 characters) and the large number of sparse ranges, the collection is not specified by code point ranges in this document but instead by a linked content.

The content linked is the same file as the one used for the source references for the CJK ideographs. The presence of an IICORE tag (kIICORE) for a given CJK ideograph indicates that the character is part of the IICORE collection. See 24.2 for further details and access to the linked content.

A.4.2 371 JIS2004 IDEOGRAPHICS EXTENSION

The fixed collection 371 JIS2004 IDEOGRAPHICS EXTENSION consists of all level 3 and level 4 CJK characters defined in JIS X 0213:2004. It contains 3695 characters.

NOTE Given its large size (3 695 characters) and the large number of sparse ranges, the collection is not specified by code point ranges in this document but instead by a linked content.

The code points of this collection are identified by J3 Kanji J sources (J3, J3A, J13, J13A, and JA3) and J4 Kanji J sources (J4, J14, and JA4) in the Source Reference file for CJK Unified ideographs (CJKSrc.txt). See 24.1 and 24.2 for details.

A.4.3 372 JAPANESE IDEOGRAPHICS SUPPLEMENT

The fixed collection 372 JAPANESE IDEOGRAPHICS SUPPLEMENT consists of all CJK characters defined in JIS X 0212:1990. It contains 5 801 characters.

NOTE 2743 characters are common between the collections 371 and 372.

The code points of this collection are identified by the Kanji J sources: J1, J13, J13A, and J14 in the Source Reference file for CJK Unified ideographs (CJKSrc.txt). See 24.1 for further details.

A.4.4 373 JAPANESE IT VENDORS CONTEMPORARY IDEOGRAPHS-1993

The fixed collection 373 JAPANESE IT VENDORS CONTEMPORARY IDEOGRAPHS-1993 consists of all CJK characters defined in the Unified Japanese IT Vendors Contemporary Ideographs, 1993 set. It contains 660 characters.

The code points of this collection are identified by the Kanji J sources: JA, JA3, and JA4 in the Source Reference file for CJK Unified ideographs (CJKSrc.txt). See 24.1 for further details.

A.4.5 374 JAPANESE JIS X 0213:2004 IDEOGRAPHS FROM PREVIOUS JIS STANDARDS

The fixed collection 374 JAPANESE JIS X 0213:2004 IDEOGRAPHS FROM PREVIOUS JIS STANDARDS consists of 2828 characters, of which 2743 were part of JIS X 0212-1990 (referred as J1 sources in the previous version of this document) and 85 were part of the 'Unified Japanese IT Vendors Contemporary Ideographs, 1993' (referred as JA in the previous version of this document). Among these 2828 characters, 205 had their glyph representation slightly modified. These 2828 characters use the 'J13, J13A, J14, JA3, and JA4' notations in their prefix four source identification as described in 24.1.

NOTE 1 Given its large size and the large number of sparse ranges, the collection is not specified by code point ranges in this document but instead by a linked content.

The fixed collection 374 is defined by a machine-readable format that is accessible as a link:

<https://standards.iso.org/iso-iec/10646/ed-7/en/JIS-X-0213-FromPrevious.txt>.

The content linked to is a plain text file, encoded as UTF-8 with CARRIAGE RETURN/ LINE FEED as end of line mark, which specifies, after a 7-lines header, as many lines as characters in the collection; each containing the following information in fixed length field:

- 1st field: BMP UCS code point (hhhh), normative
- 2nd field: J Source reference in previous editions of this standard
- 3rd field: J Source reference in this standard

The fields are delimited by a SPACE character; the format definition for the code point uses 'h' as a hexadecimal unit. The J Source references use the format specified in 24.2.

A.4.6 375 JAPANESE CORE KANJI

The fixed collection 375 JAPANESE CORE KANJI consists of 2136 CJK ideographs. All but four of these ideographs are identified by a J0 source. The code points of these four ideographs are: U+525D (J3A source), U+5861 (J13 source), U+9830 (J13 source), and U+20B9F (J3A source).

NOTE Given its large size and the large number of sparse ranges, the collection is not specified by code point ranges in this document but instead by a linked content.

The fixed collection 375 is defined by a machine-readable format that is accessible as a link:

<https://standards.iso.org/iso-iec/10646/ed-7/en/JapaneseCoreKanji.txt>.

The content linked to is a plain text file, encoded as UTF-8 with CARRIAGE RETURN/ LINE FEED as end of line mark, which specifies, after a 5-lines header, as many lines as characters in the collection; each containing the following information in a fixed length field:

- UCS code point (hhhh or hhhhh), normative

The format definition for the code point uses 'h' as a hexadecimal unit.

A.5 Other collections

A.5.1 General

The collections specified within A.5 address the referencing need of users community. Characters may be from different writing systems and may be coded in different planes. It includes collection for users community from Lithuania, Japan and Europe as a whole.

NOTE The acronym MES used in collection names below indicates Multilingual European Subset.

A.5.2 281 MES-1

The fixed collection 281 MES-1 is specified by the following ranges of code points as indicated for each row.

Plane 00

Row Values within row

00	20-7E A0-FF

A.5.4 283 MODERN EUROPEAN SCRIPTS

The collection 283 MODERN EUROPEAN SCRIPTS is specified by the following collections:

Collection number and name			
1	BASIC LATIN	34	CURRENCY SYMBOLS
2	LATIN-1 SUPPLEMENT	35	COMBINING DIACRITICAL MARKS FOR SYMBOLS
3	LATIN EXTENDED-A	36	LETTERLIKE SYMBOLS
4	LATIN EXTENDED-B	37	NUMBER FORMS
5	IPA EXTENSIONS	38	ARROWS
6	SPACING MODIFIER LETTERS	39	MATHEMATICAL OPERATORS
7	COMBINING DIACRITICAL MARKS	40	MISCELLANEOUS TECHNICAL
8	BASIC GREEK	42	OPTICAL CHARACTER RECOGNITION
9	GREEK SYMBOLS AND COPTIC	44	BOX DRAWING
10	CYRILLIC	45	BLOCK ELEMENTS
11	ARMENIAN	46	GEOMETRIC SHAPES
27	BASIC GEORGIAN	47	MISCELLANEOUS SYMBOLS
30	LATIN EXTENDED ADDITIONAL	65	COMBINING HALF MARKS
31	GREEK EXTENDED	70	SPECIALS
32	GENERAL PUNCTUATION	92	CYRILLIC SUPPLEMENT
33	SUPERSCRIPTS AND SUBSCRIPTS	104	LTR ALPHABETIC PRESENTATION FORMS

A.5.5 284 CONTEMPORARY LITHUANIAN LETTERS

The fixed extended collection 284 CONTEMPORARY LITHUANIAN LETTERS is defined as follows.

Plane 00Row Values within row

00	41-50 52-56 59-5A 61-70 72-76 79-7A C0-C1 C3 C8-C9 CC-CD D1-D3 D5 D9-DA DD E0-E1 E3 E8-E9 F1-F3 F5 F9-FA FD

A.5.6 285 BASIC JAPANESE

The fixed collection 285 BASIC JAPANESE is a core Japanese subset. Its 6 884 characters are identified by:

- All J0 Kanji J sources in the Source Reference file for CJK Unified ideographs (CJKU_SR.txt). See 24.1 for further details.
- Ranges of code points arranged by planes:

Plane 00

A.5.9 288 MULTILINGUAL LATIN SUBSET

The fixed collection 288 MULTILINGUAL LATIN SUBSET is an international Latin subset. It is specified by the following ranges of code points as indicated for each row.

NOTE The collection 288 MULTILINGUAL LATIN SUBSET does not provide an exhaustive coverage of all languages using Latin-based orthographies. It is referenced by ISO/IEC 9995-3:2010 Keyboard layouts for text and office systems – Part 3: Complementary layouts of the alphanumeric zone of the alphanumeric section.

A.5.10 390 MOJI-JOHO-KIBAN IDEOGRAPHS-2016

The fixed extended collection 390 MOJI-JOHO-KIBAN IDEOGRAPHS-2016 is the initial version of the fixed extended collection 391 and use the same content syntax. The collection 391 should be used instead.

NOTE 1 Given its large size and the large number of sparse ranges, the collection is not specified by code point ranges and sequences in this document but instead by a linked content.

NOTE 2 The ideographic variation sequences <535A,E010A> and <535A,E010B> have been removed from collection 391.

The fixed extended collection 390 is defined by a machine-readable format that is accessible as a link:

<https://standards.iso.org/iso-iec/10646/ed-7/en/JMJKI-2016.txt>.

See the content definition of collection 391 below for further information.

A.5.11 391 MOJI-JOHO-KIBAN IDEOGRAPHS-2018

The fixed extended collection 391 MOJI-JOHO-KIBAN IDEOGRAPHS-2016 consists of all CJK Characters, Ideographic Variation Sequences (IVS) and Standardized Variation Sequences (SVS) corresponding to identifiable characters in the MOJI-JOHO-KIBAN set prepared for persons' names in public service in Japan that can be represented in this document.

NOTE Given its large size and the large number of sparse ranges, the collection is not specified by code point ranges and sequences in this document but instead by a linked content.

The fixed extended collection 391 is defined by a machine-readable format that is accessible as a link:

<https://standards.iso.org/iso-iec/10646/ed-7/en/JMJKI-2018.txt>.

The content linked to is a plain text file, encoded as UTF-8 with CARRIAGE RETURN/ LINE FEED as end of line mark. The file specifies, after a 7-lines header, as many lines as code points in the collection; each containing the following information:

- (CP) (, <CP, SV>) * (, <CP, IV>) * where CP is a code point corresponding to a CJK Unified ideograph: h { 4 , 5 } , SV is a standardized variation selector (range FE00 to FE0F: h { 4 }) , and IV is an ideographic variation selector (range E0100 to E01EF: h { 5 }) , all normative.

EXAMPLE Code points 7E04 to 7E0E:

```
7E04
7E05
7E08
7E09,<7E09,FE00>
7E0A,<7E0A,E0101>,<7E0A,E0102>,<7E0A,E0103>
7E0B,<7E0B,E0101>,<7E0B,E0102>
7E0C,<7E0C,E0100>,<7E0C,E0101>
7E0D
7E0E
```

A.6 Unicode collections

These fixed collections describe range of code points corresponding to various versions of the Unicode Standard. They include characters from the BMP as well as Supplementary planes. The Unicode Standard specifies an 'Age' property which determine when various code points were designated/assigned in successive version of the Unicode Standard (see Clause 2). Code points belonging to a given version can be determined by having an Age property value less than or equal to the version number. The following list enumerates the Unicode collections:

303	UNICODE 3.1	Age property value less than or equal to 3.1
-----	-------------	--

ISO/IEC 10646 7th Edition:2025 CD.2 (en)

304	UNICODE 3.2	Age property value less than or equal to 3.2
305	UNICODE 4.0	Age property value less than or equal to 4.0
306	UNICODE 4.1	Age property value less than or equal to 4.1
307	UNICODE 5.0	Age property value less than or equal to 5.0
308	UNICODE 5.1	Age property value less than or equal to 5.1
309	UNICODE 5.2	Age property value less than or equal to 5.2
310	UNICODE 6.0	Age property value less than or equal to 6.0
311	UNICODE 6.1	Age property value less than or equal to 6.1
312	UNICODE 6.2	Age property value less than or equal to 6.2
313	UNICODE 6.3	Age property value less than or equal to 6.3
314	UNICODE 7.0	Age property value less than or equal to 7.0
315	UNICODE 8.0	Age property value less than or equal to 8.0
316	UNICODE 9.0	Age property value less than or equal to 9.0
317	UNICODE 10.0	Age property value less than or equal to 10.0
318	UNICODE 11.0	Age property value less than or equal to 11.0
319	UNICODE 12.0	Age property value less than or equal to 12.0
320	UNICODE 12.1	Age property value less than or equal to 12.1
321	UNICODE 13.0	Age property value less than or equal to 13.0
322	UNICODE 14.0	Age property value less than or equal to 14.0
323	UNICODE 15.0	Age property value less than or equal to 15.0
324	UNICODE 16.0	Age property value less than or equal to 16.0
325	UNICODE 17.0	Age property value less than or equal to 17.0

NOTE Prior to Unicode 3.1, collection numbers were not specifically attributed to their code point contents. The Unicode 2.0 repertoire corresponds to collection 301 BMP-AMD.7. Unicode 2.1 adds the code points 20AC EURO SIGN and FFFC OBJECT REPLACEMENT CHARACTER to the collection 301. The Unicode 3.0 repertoire corresponds to collection 302 BMP SECOND EDITION. The Unicode 13.0 repertoire (collection 321) is identical to the repertoire of ISO/IEC 10646:2020 (6th edition).

Annex B
(normative)
List of combining characters

NOTE Replaced by formal character class definition, see 3.14.

Annex C
(normative)

Transformation format for planes 01 to 10 of the UCS (UTF-16)

NOTE Incorporated in main body text, see UCS UTF-16 encoding form in Clause 10 and UCS UTF-16 based encoding schemes in Clause 11.

Annex D
(normative)
UCS Transformation Format 8 (UTF-8)

NOTE Incorporated in main body text, see UCS UTF-8 encoding form in Clause 10 and UCS UTF-8 encoding schemes in Clause 11.

Annex E
(normative)
Mirrored characters in bidirectional context

NOTE Replaced by formal character class definition for mirrored character, see 16.1.

Annex F

(informative)

Format characters

There is a special class of characters, called Format characters, the primary purpose of which is to affect the layout or processing of characters around them. With few exceptions, these characters do not have printable graphic symbols and, like the space characters, are represented in the character code charts by dotted boxes.

The function of most of these characters is to indicate the correct presentation of a code unit sequence. For any text processing other than presentation (such as sorting and searching), the format characters, except for ZWJ and ZWNJ described in F.1.3, can be ignored by filtering them out. The format characters are not intended to be used in conjunction with bidirectional control functions from ISO/IEC 6429.

F.1 General format characters

F.1.1 Hyphen boundary indicator

SOFT HYPHEN (00AD): SOFT HYPHEN (SHY) is a format character that indicates a preferred intra-word line-break opportunity. If the line is broken at that point, then whatever mechanism is appropriate for intra-word line-breaks should be invoked, just as if the line break had been triggered by another mechanism, such as a dictionary lookup. Depending on the language and the word, that may produce different visible results, such as:

- inserting a graphic symbol indicating the hyphenation and breaking the line after it,
- inserting a graphic symbol indicating the hyphenation, breaking the line after the symbol and changing spelling in the divided word parts,
- not showing any visible change and simply breaking the line at that point.

The inserted graphic symbol, if any, can take a wide variety of shapes, such as HYPHEN (2010), ARMENIAN HYPHEN (058A), MONGOLIAN TODO SOFT HYPHEN (1806), as appropriate for the situation.

When encoding text that includes explicit line breaking opportunities, including actual hyphenations, characters such as HYPHEN, ARMENIAN HYPHEN, and MONGOLIAN TODO SOFT HYPHEN may be used, depending on the language.

When a SOFT HYPHEN is inserted into a code unit sequence to encode a possible hyphenation point (for example: "tug{00AD}gumi"), the character representation remains otherwise unchanged. When encoding a code unit sequence that includes characters encoding hard line breaks, including actual hyphenations, the character representation of the text sequence should reflect any changes due to hyphenation (for example: "tugg{2010}" / "gumi", where / represents the line break).

NOTE The notations {00AD} and {2010} indicate the inclusion of the corresponding code points: 00AD and 2010 into the code unit sequences. The curly brackets "{}" are not part of the code unit sequences.

F.1.2 Word and line boundary indicators

ZERO WIDTH SPACE (200B): This character behaves like a SPACE in that it indicates a word boundary, but unlike SPACE it has no presentational width. For example, this character could be used to indicate word boundaries in Thai, which does not use visible gaps to separate words.

WORD JOINER (2060) and **ZERO WIDTH NO-BREAK SPACE** (FEFF): These characters behave like a NO-BREAK SPACE in that they indicate the absence of line breaking opportunities, but unlike NO-BREAK SPACE they have no presentational width. For example, these characters could be inserted after the fourth character in the text "base+delta" to indicate that there is to be no line breaking opportunity between the "e" and the "+".

NOTE For additional usages of the ZERO WIDTH NO-BREAK SPACE for "signature", see Clause 11.

F.1.3 Cursive joiners

The characters described in this sub-clause are used to indicate whether or not the adjacent characters are joined together in rendering (cursive joiners).

ZERO WIDTH NON-JOINER (200C): This character indicates that the adjacent characters are not joined together in cursive connection even when they would normally join together as cursive letter forms. For example, ZERO WIDTH NON-JOINER between ARABIC LETTER NOON and ARABIC LETTER MEEM indicates that the characters are not rendered with the normal cursive connection.

MONGOLIAN VOWEL SEPARATOR (180E): This character acts in a similar fashion to the ZERO WIDTH NON-JOINER by suppressing the cursive connection between adjacent characters but only in the context of Mongolian vowels.

ZERO WIDTH JOINER (200D): This character indicates that the adjacent characters are represented with joining forms in cursive connection even when they would not normally join together as cursive letter forms. For example, in the sequence SPACE followed by ARABIC LETTER BEH followed by SPACE, ZERO WIDTH JOINER can be inserted between the first two characters to display the final form of the ARABIC LETTER BEH.

F.1.4 Format separators

The characters described in this sub-clause are used to indicate formatting boundaries between lines or paragraphs.

LINE SEPARATOR (2028): This character indicates where a new line starts; although the text continues to the next line, it does not start a new paragraph; e.g. no inter-paragraph indentation might be applied.

PARAGRAPH SEPARATOR (2029): This character indicates where a new paragraph starts; e.g. the text continues on the next line and inter-paragraph line spacing or paragraph indentation might be applied.

F.1.5 Bidirectional text formatting

The characters described in this sub-clause are used in formatting bidirectional text. If the specification of a subset includes these characters, then texts containing right-to-left characters are to be rendered with an implicit bidirectional algorithm.

An implicit algorithm uses the directional character properties to determine the correct display order of characters on a horizontal line of text.

The following three characters are format characters that act exactly like right-to-left or left-to-right characters in terms of affecting ordering (Bidirectional format marks). They have no visible graphic symbols, and they do not have any other semantic effect.

Their use can be more convenient than the explicit embeddings or overrides, since their scope is more local.

LEFT-TO-RIGHT MARK (200E): In bidirectional formatting, this character acts like a left-to-right character (such as LATIN SMALL LETTER A).

ARABIC LETTER MARK (061C): In bidirectional formatting, this character acts like a right-to-left Arabic character (such as ARABIC LETTER NOON).

RIGHT-TO-LEFT MARK (200F): In bidirectional formatting, this character acts like a generic right-to-left character (such as NKO LETTER A).

The following five format characters indicate that a piece of text is to be treated as embedded and is to have a particular ordering attached to it (Bidirectional format embeddings). For example, an English quotation in the middle of an Arabic sentence can be marked as being an embedded left-to-right string. These format characters nest in blocks, with the embedding and override characters initiating (pushing) a block, and the pop character terminating (popping) a block.

The function of the embedding and override characters are very similar; the main difference is that the embedding characters specify the implicit direction of the text, while the override characters specify the explicit direction of the text. When text has an explicit direction, the normal directional character properties are ignored, and all of the text is assumed to have the ordering direction determined by the override character.

LEFT-TO-RIGHT EMBEDDING (202A): This character is used to indicate the start of a left-to-right implicit embedding.

RIGHT-TO-LEFT EMBEDDING (202B): This character is used to indicate the start of a right-to-left implicit embedding.

LEFT-TO-RIGHT OVERRIDE (202D): This character is used to indicate the start of a left-to-right explicit embedding.

RIGHT-TO-LEFT OVERRIDE (202E): This character is used to indicate the start of a right-to-left explicit embedding.

POP DIRECTIONAL FORMATTING (202C): This character is used to indicate the termination of an implicit or explicit directional embedding initiated by one of the four characters above.

The following four format characters, commonly called isolate characters, can be applied to a text segment to reduce its effect on the bidirectional ordering of its surroundings to that of a neutral character. This is in contrast to the existing embedding formatting characters (LEFT-TO-RIGHT EMBEDDING, RIGHT-TO-LEFT EMBEDDING, POP DIRECTIONAL FORMATTING) which have the effect of a strong character on their surroundings. Otherwise, isolate characters are similar to embedding characters: they declare a direction for the text inside it, and can be nested inside another isolate or embedding (and vice-versa).

LEFT-TO-RIGHT ISOLATE (2066): This character is used to indicate the start of a left-to-right isolate.

RIGHT-TO-LEFT ISOLATE (2067): This character is used to indicate the start of a right-to-left isolate.

FIRST STRONG ISOLATE (2068): This character is used to indicate the start of a first-strong isolate, i.e. one whose direction is determined by applying specific Unicode Bidi Algorithm (see Clause 2) paragraph level rules to the isolate's content as if it were a separate paragraph.

POP DIRECTIONAL ISOLATE (2069): This character is used to indicate the end of an isolate.

F.2 Script-specific format characters

F.2.1 Symmetric swapping format characters

The following two characters are used in conjunction with the class of left/right handed pairs of mirrored characters described in Clause 16. The following format characters indicate whether the interpretation of the term LEFT or RIGHT in the character names is OPENING or CLOSING respectively. The following characters do not nest.

The default state of interpretation may be set by a higher level protocol or standard, such as ISO/IEC 6429. In the absence of such a protocol, the default state is as established by ACTIVATE SYMMETRIC SWAPPING.

INHIBIT SYMMETRIC SWAPPING (206A): Between this character and the following ACTIVATE SYMMETRIC SWAPPING format character (if any), the mirrored characters described in Clause 16 are interpreted and rendered as LEFT and RIGHT, and the processing specified in that clause is not performed.

ACTIVATE SYMMETRIC SWAPPING (206B): Between this character and the following INHIBIT SYMMETRIC SWAPPING format character (if any), the mirrored characters described in Clause 16 are interpreted and rendered as OPENING and CLOSING characters as specified in that clause.

F.2.2 Character shaping selectors

The following two characters are used in conjunction with Arabic presentation forms. During the presentation process, certain characters may be joined together in cursive connection or ligatures. The following characters indicate that the character shape determination process used to achieve this presentation effect is either activated or inhibited. The following characters do not nest.

INHIBIT ARABIC FORM SHAPING (206C): Between this character and the following **ACTIVATE ARABIC FORM SHAPING** format character (if any), the character shaping determination process is inhibited. The stored Arabic presentation forms are presented without shape modification. This is the default state.

ACTIVATE ARABIC FORM SHAPING (206D): Between this character and the following **INHIBIT ARABIC FORM SHAPING** format character (if any), the stored Arabic presentation forms are presented with shape modification by means of the character shaping determination process.

NOTE These characters have no effect on characters that are not presentation forms: in particular, Arabic nominal characters as from 0600 to 06FF are always subject to character shaping, and are unaffected by these formatting characters.

F.2.3 Numeric shape selectors

The following two characters allow the selection of the shapes in which the digits from 0030 to 0039 are rendered. The following characters do not nest.

NATIONAL DIGIT SHAPES (206E): Between this character and the following **NOMINAL DIGIT SHAPES** format character (if any), digits from 0030 to 0039 are rendered with the appropriate national digit shapes as specified by means of appropriate agreements. For example, they could be displayed with shapes such as the **ARABIC-INDIC** digits from 0660 to 0669.

NOMINAL DIGIT SHAPES (206F): Between this character and the following **NATIONAL DIGIT SHAPES** format character (if any), the digits from 0030 to 0039 are rendered with the shapes as those shown in the code charts for those digits. This is the default state.

F.3 Interlinear annotation characters

The following three characters are used to indicate that an identified character string (the annotation string) is regarded as providing an annotation for another identified character string (the base string).

INTERLINEAR ANNOTATION ANCHOR (FFF9): This character indicates the beginning of the base string.

INTERLINEAR ANNOTATION SEPARATOR (FFFA): This character indicates the end of the base string and the beginning of the annotation string.

INTERLINEAR ANNOTATION TERMINATOR (FFFB): This character indicates the end of the annotation string.

The relationship between the annotation string and the base string is defined by agreement between the user of the originating device and the user of the receiving device. For example, if the base string is rendered in a visible form the annotation string may be rendered on a different line from the base string, in a position close to the base string.

If the interlinear annotation characters are filtered out during processing, then all characters between the Interlinear Annotation Separator and the Interlinear Annotation Terminator should also be filtered out.

F.4 Subtending format characters

The following ten characters are used to subtend a sequence of subsequent characters:

0600	ARABIC NUMBER SIGN
0601	ARABIC SIGN SANAH
0602	ARABIC FOOTNOTE MARKER
0603	ARABIC SIGN SAFHA

0604	ARABIC SIGN SAMVAT
0605	ARABIC NUMBER MARK ABOVE
06DD	ARABIC END OF AYAH
08E2	DISPUTED END OF AYA
070F	SYRIAC ABBREVIATION MARK
110BD	KAITHI NUMBER SIGN

The scope of these characters and more details about their usage can be found in the Unicode Standard (see <https://www.unicode.org/references/> for referencing information).

F.5 Supertending format characters

The following three characters are used to supertend a sequence of subsequent characters:

0890	ARABIC POUND MARK ABOVE
0891	ARABIC PIASTRE MARK ABOVE
110CD	KAITHI NUMBER SIGN ABOVE

F.6 Egyptian hieroglyphic format characters

The following sixteen format characters are used in layout of Egyptian hieroglyphs:

13430	EGYPTIAN HIEROGLYPH VERTICAL JOINER
13431	EGYPTIAN HIEROGLYPH HORIZONTAL JOINER
13432	EGYPTIAN HIEROGLYPH INSERT AT TOP START
13433	EGYPTIAN HIEROGLYPH INSERT AT BOTTOM START
13434	EGYPTIAN HIEROGLYPH INSERT AT TOP END
13435	EGYPTIAN HIEROGLYPH INSERT AT BOTTOM END
13436	EGYPTIAN HIEROGLYPH OVERLAY MIDDLE
13437	EGYPTIAN HIEROGLYPH BEGIN SEGMENT
13438	EGYPTIAN HIEROGLYPH END SEGMENT
13439	EGYPTIAN HIEROGLYPH INSERT AT MIDDLE
1343A	EGYPTIAN HIEROGLYPH INSERT AT TOP
1343B	EGYPTIAN HIEROGLYPH INSERT AT BOTTOM
1343C	EGYPTIAN HIEROGLYPH BEGIN ENCLOSURE
1343D	EGYPTIAN HIEROGLYPH END ENCLOSURE
1343E	EGYPTIAN HIEROGLYPH BEGIN WALLED ENCLOSURE
1343F	EGYPTIAN HIEROGLYPH END WALLED ENCLOSURE

The scope of these characters and more details about their usage can be found in the Unicode Standard (see <https://www.unicode.org/references/> for referencing information).

F.7 Shorthand format characters

The use of overlapping letters to indicate abbreviations and initialisms is found in many shorthand systems. The following two characters are used to control such overlap.

SHORTHAND FORMAT LETTER OVERLAP (1BCA0): This character indicates a single letter overlap, with the text continuing to flow as if that overlapping character did not exist.

SHORTHAND FORMAT CONTINUING OVERLAP (1BCA1): This character indicates a continuing overlap where the text flow proceeds from the overlapping character.

In some shorthand systems certain set of word endings are indicated by letters following not in the default direction of text flow - to the right, but above or below the word. The following two characters are used to control such behaviours.

SHORTHAND FORMAT DOWN STEP (1BCA2): This character indicates that a following character should be rendered below the previous character, with any subsequent joined characters proceeding relative to the lowered glyph. At word boundaries, this causes the next word (or stenographic period) to be lowered.

SHORTHAND FORMAT UP STEP (1BCA3): This character indicates that a following word (or stenographic period) is to be raised.

F.8 Invisible mathematical operators

In mathematics, some operators and punctuation are often implied but not displayed. Special format control characters known as invisible operators can be used to make such operators explicit for use in machine interpretation of mathematical expressions.

FUNCTION APPLICATION (2061): This character indicates the application of a function.

INVISIBLE TIMES (2062): This character indicates a multiplication.

INVISIBLE SEPARATOR (2063): This character indicates that adjacent mathematical symbols form a list, e.g. when no visible COMMA is used between multiple indices.

INVISIBLE PLUS (2064): This character indicates an addition.

F.9 Western musical symbols

This document does not specify an encoding solution for musical scores or musical pitch. Solutions for these needs would require another description layer on top of the encoding definition of the characters specified in this standard. However, even without that additional layer, these characters can be used as simple musical reference symbols for general purposes in text descriptions of musical matters.

Extended beams are used frequently in music notation between groups of notes having short values. The format characters 1D173 MUSICAL SYMBOL BEGIN BEAM and 1D174 MUSICAL SYMBOL END BEAM can be used to indicate the extents of beam groupings. In some exceptional cases, beams are unclosed on one end. This can be indicated with a "null note" (MUSICAL SYMBOL NULL NOTEHEAD) character if no stem is to appear at the end of the beam.

Similarly, other format characters have been provided for other connecting structures. The characters

```
1D175 MUSICAL SYMBOL BEGIN TIE
1D176 MUSICAL SYMBOL END TIE
1D177 MUSICAL SYMBOL BEGIN SLUR
1D178 MUSICAL SYMBOL END SLUR
1D179 MUSICAL SYMBOL BEGIN PHRASE
1D17A MUSICAL SYMBOL END PHRASE
```

indicate the extent of these features.

These pairs of characters modify the layout and grouping of notes and phrases in full music notation. When musical examples are written or rendered in plain text without special software, the start/end control characters may be rendered as brackets or left un-interpreted. More sophisticated in-line processes may interpret them, to the extent possible, in their actual control capacity, rendering ties, slurs, beams, and phrases as appropriate.

For maximum flexibility, the character set includes both pre-composed note values as well as primitives from which complete notes are constructed. Due to their ubiquity, the pre-composed versions are provided mainly for convenience.

Coding convenience notwithstanding, notes built up from alternative noteheads, stems and flags, and articulation symbols are necessary for complete implementations and complex scores. Examples of their use include American shape-note and modern percussion notations. For example,

```
MUSICAL SYMBOL SQUARE NOTEHEAD BLACK + MUSICAL SYMBOL COMBINING STEM
MUSICAL SYMBOL X NOTEHEAD + MUSICAL SYMBOL COMBINING STEM
```

Augmentation dots and articulation symbols may be appended to either the pre-composed or built-up notes.

In addition, augmentation dots and articulation symbols may be repeated as necessary to build a complete note symbol. For example,

MUSICAL SYMBOL EIGHTH NOTE + MUSICAL SYMBOL COMBINING AUGMENTATION DOT + MUSICAL SYMBOL COMBINING AUGMENTATION DOT + MUSICAL SYMBOL COMBINING ACCENT

F.10 Language tagging using Tag characters

F.10.1 General

The purpose of Tag characters is to associate a text attribute with a point or range of a text string. The value of a particular tag is not generally considered to be part of the content of the text. For example, tagging could be used to mark the language, or the font applied to a portion of text. Outside of that usage, these characters are ignorable.

These tag characters can be used to spell out a character string in any ASCII-based tagging scheme that needs to be embedded into plain text. These characters can be easily identified by their code value and there is no overloading of usage for these tag characters. They can only express tag values and never textual content itself.

When characters are used within the context of a protocol or syntax containing explicit markup providing the same association, the Tag characters may be filtered out and ignored by these protocols.

For example, in SGML/XML context, an explicit language markup is specified. Therefore, the LANGUAGE TAG (E0001) and other tag characters should not be used to mark a language in that context. The Unicode Consortium and the W3C have co-written a technical report: Unicode in XML and other Markup Languages (UTR#20), available from the Unicode web site (<http://www.unicode.org/reports/>), which describes these issues in detail.

The TAGS block contains 97 dedicated tag characters consisting of a clone of the BASIC LATIN graphic characters (names formed by prefixing these BASIC LATIN names with the word 'TAG', code points from E0020 to E007E), as well as a language tag identification character: LANGUAGE TAG (E0001) and a cancel tag character: CANCEL TAG (E007F).

The tag identification character is used as a mechanism for identifying tags of different types. This enables multiple types of tags to coexist amicably embedded in plain text and solves the problem of delimitation if a tag is concatenated directly onto another tag. Although only one type of tag is currently specified, namely the language tag, the encoding of other tag identification characters in the future would allow for distinct types to be used.

F.10.2 Syntax for embedding tag characters

In order to embed any ASCII-derived tag in plain text, the tag is simply spelled out with the tag characters, prefixed with the relevant tag identification character. The resultant string is embedded directly in the text.

No termination character is required for a tag. A tag terminates either when the first non Special Purpose Plane character is encountered, or when the next tag identification character is encountered.

Tag arguments can only be encoded using tag characters. No other characters are valid for expressing the tag arguments.

F.10.3 Tag scope and nesting

The value of a tag continues from the point the tag is embedded in text until

- either the end of the code unit sequence is reached,
- or the tag is explicitly cancelled by the CANCEL TAG character.

Tags of the same type cannot be nested. The appearance of a new embedded language tag, for example after text which was already language-tagged, simply changes the tagged value for subsequent text to that specified in the new tag.

F.10.4 Cancellling tag values

The CANCEL TAG character is provided to allow the specific canceling of a tag value. For example to cancel a language tag, the LANGUAGE TAG should precede the CANCEL TAG character.

The usage of the CANCEL TAG character without a prefixed tag identification character cancels any tag value that may be defined.

The main function of the character is to make possible such operations as blind concatenation of strings in a tagged context without the propagation of inappropriate tag values across the string boundaries.

F.10.5 Language tags

Language tags are of general interest and may have a high degree of interoperability for protocol usage. For example, to embed a language tag for Japanese, the tag characters would be used as follows:

E0001 E006A E0061

The first value is the coded value of the LANGUAGE TAG character, the second corresponds to the TAG LATIN SMALL LETTER J, and the third corresponds to the TAG LATIN SMALL LETTER A. The sequence 'ja' corresponds to the 2-letter code representing the Japanese language in ISO 639.

Annex G
(informative)
Alphabetically sorted list of character names

The alphabetically sorted list of character names is provided in machine-readable format that is accessible as a link from this document: <https://standards.iso.org/iso-iec/10646/ed-7/en/Allnames.txt>.

The content linked to is a plain text file, encoded as UTF-8 with CARRIAGE RETURN/ LINE FEED as end of line mark. The file specifies, after a 5-lines header, all the character names from this document except Hangul syllables, CJK ideographs, Nushu characters, Tangut ideographs, Jurchen, Khitan Small Script characters, and Egyptian hieroglyphs part of the extended block (these are characters from blocks:

HANGUL SYLLABLES,
CJK UNIFIED IDEOGRAPHS,
CJK UNIFIED IDEOGRAPHS EXTENSION A,
CJK UNIFIED IDEOGRAPHS EXTENSION B,
CJK UNIFIED IDEOGRAPHS EXTENSION C,
CJK UNIFIED IDEOGRAPHS EXTENSION D,
CJK UNIFIED IDEOGRAPHS EXTENSION E,
CJK UNIFIED IDEOGRAPHS EXTENSION F,
CJK UNIFIED IDEOGRAPHS EXTENSION G,
CJK UNIFIED IDEOGRAPHS EXTENSION H,
CJK UNIFIED IDEOGRAPHS EXTENSION I,
CJK UNIFIED IDEOGRAPHS EXTENSION J,
CJK COMPATIBILITY IDEOGRAPHS,
CJK COMPATIBILITY IDEOGRAPHS SUPPLEMENT,
NUSHU,
TANGUT,
TANGUT SUPPLEMENT,
JURCHEN,
KHITAN SMALL SCRIPT, and
EGYPTIAN HIEROGLYPHS EXTENDED-A.

Each line contains the following information organized in fields delimited by the TAB character:

- 1st field: UCS code point in the format (hhhh | hhhhh), ‘h’ being a hexadecimal unit,
- 2nd field: character name.

Annex H
(informative)
The use of “signatures” to identify UCS

NOTE Integrated in main body text, see Clause 11.

Annex I (informative) Ideographic description characters

I.1 General

An Ideographic Description Character (IDC) is a graphic character, which is used with a sequence of other graphic characters to form an Ideographic Description Sequence (IDS). Such a sequence may be used to describe an ideographic character which is not specified within this document.

The IDS describes the ideograph in the abstract form. It is not interpreted as a composed character and does not imply any specific form of rendering.

NOTE An IDS is not a character and therefore is not a member of the repertoire of this document.

I.2 Syntax of an ideographic description sequence

An IDS consist of an IDC followed by a fixed number of Description Component (DC) organized in subgroups corresponding to script category, such as CJK ideographs or Tangut ideographs. An IDS should only use items belonging to a single subgroup, to clarify the script that it belongs to. The subgroups and their contents are as follows:

- CJK IDS subgroup, including DCs which may be of any one of the following:
 - a coded CJK ideograph, which consists of any coded character from the CJK UNIFIED IDEOGRAPHS blocks or the CJK COMPATIBILITY IDEOGRAPHS blocks,
 - a coded CJK radical, which consists of any coded character from the CJK RADICALS block or the KANGXI RADICALS block,
 - a coded CJK stroke, which consists of any coded character from the CJK STROKES block,
 - the character FF1F FULLWIDTH QUESTION MARK to represent an otherwise undescribed DC,
 - a private use character (as long as the interchanging parties have agreed that the particular private use character represents a particular CJK ideograph or component of a CJK ideograph),
 - another CJK IDS.
- Tangut IDS subgroup, including DCs which may be of any one of the following:
 - a Tangut ideograph, which consists of any character from the TANGUT block,
 - a Tangut component, which consists of any coded character from the TANGUT COMPONENTS block,
 - a coded stroke, which consists of any coded character from the CJK STROKES block,
 - the character FF1F FULLWIDTH QUESTION MARK to represent an otherwise undescribed DC,
 - another Tangut IDS.

NOTE The above description implies that any IDS may be nested within another IDS in same subgroup.

Each IDC has four properties as summarized in table I.1 below:

- the number of DCs used in the IDS that commences with that IDC,
- the definition of its acronym,
- the syntax of the corresponding IDS,
- the relative positions of the DCs in the visual representation of the ideograph that is being described in its abstract form.

The syntax of the IDS introduced by each IDC is indicated in the “IDS Acronym and Syntax” column of the table by the abbreviated name of the IDC (e.g. IDC-LTR) followed by the corresponding number of DCs, i.e. (D₁ D₂) or (D₁ D₂ D₃).

I.3 Individual definitions of the ideographic description characters

IDEOGRAPHIC DESCRIPTION CHARACTER LEFT TO RIGHT (2FF0): The IDS introduced by this character describes the abstract form of the ideograph with D_1 on the left and D_2 on the right.

IDEOGRAPHIC DESCRIPTION CHARACTER ABOVE TO BELOW (2FF1): The IDS introduced by this character describes the abstract form of the ideograph with D_1 above D_2 .

IDEOGRAPHIC DESCRIPTION CHARACTER LEFT TO MIDDLE AND RIGHT (2FF2): The IDS introduced by this character describes the abstract form of the ideograph with D_1 on the left of D_2 , and D_2 on the left of D_3 .

IDEOGRAPHIC DESCRIPTION CHARACTER ABOVE TO MIDDLE AND BELOW (2FF3): The IDS introduced by this character describes the abstract form of the ideograph with D_1 above D_2 , and D_2 above D_3 .

IDEOGRAPHIC DESCRIPTION CHARACTER FULL SURROUND (2FF4): The IDS introduced by this character describes the abstract form of the ideograph with D_1 surrounding D_2 .

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM ABOVE (2FF5): The IDS introduced by this character describes the abstract form of the ideograph with D_1 above D_2 , and surrounding D_2 on both sides.

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM BELOW (2FF6): The IDS introduced by this character describes the abstract form of the ideograph with D_1 below D_2 , and surrounding D_2 on both sides.

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM LEFT (2FF7): The IDS introduced by this character describes the abstract form of the ideograph with D_1 on the left of D_2 , and surrounding D_2 above and below.

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM RIGHT (2FFC): The IDS introduced by this character describes the abstract form of the ideograph with D_1 on the right of D_2 , and surrounding D_2 above and below.

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM UPPER LEFT (2FF8): The IDS introduced by this character describes the abstract form of the ideograph with D_1 at the top left corner of D_2 , and partly surrounding D_2 above and to the left.

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM UPPER RIGHT (2FF9): The IDS introduced by this character describes the abstract form of the ideograph with D_1 at the top right corner of D_2 , and partly surrounding D_2 above and to the right.

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM LOWER LEFT (2FFA): The IDS introduced by this character describes the abstract form of the ideograph with D_1 at the bottom left corner of D_2 , and partly surrounding D_2 below and to the left.

IDEOGRAPHIC DESCRIPTION CHARACTER SURROUND FROM LOWER RIGHT (2FFD): The IDS introduced by this character describes the abstract form of the ideograph with D_1 at the bottom right corner of D_2 , and partly surrounding D_2 below and to the right.

IDEOGRAPHIC DESCRIPTION CHARACTER HORIZONTAL REFLECTION (2FFE): The IDS introduced by this character describes the abstract form of the ideograph with D_1 horizontally mirrored.

IDEOGRAPHIC DESCRIPTION CHARACTER ROTATION (2FFF): The IDS introduced by this character describes the abstract form of the ideograph with D_1 rotated (usually 180 degrees, either direction).

IDEOGRAPHIC DESCRIPTION CHARACTER SUBTRACTION (31EF): The IDS introduced by this character describes the abstract form of the ideograph with D_2 subtracted from D_1 .

IDEOGRAPHIC DESCRIPTION CHARACTER OVERLAID (2FFB): The IDS introduced by this character describes the abstract form of the ideograph with D_1 and D_2 overlaying each other.

Table I.1: Properties of ideographic description characters

Character Name: IDEOGRAPHIC DESCRIPTION CHARACTER ...	no. of DCs	IDS Acronym and Syntax	Relative posi- tions of DCs	Example of IDS	IDS example represents:
LEFT TO RIGHT	2	IDC-LTR D ₁ D ₂			仁
ABOVE TO BELOW	2	IDC-ATB D ₁ D ₂			吉
LEFT TO MIDDLE AND RIGHT	3	IDC-LMR D ₁ D ₂ D ₃			街
ABOVE TO MIDDLE AND BELOW	3	IDC-AMB D ₁ D ₂ D ₃			壹
FULL SURROUND	2	IDC-FSD D ₁ D ₂			回
SURROUND FROM ABOVE	2	IDC-SAV D ₁ D ₂			凰
SURROUND FROM BELOW	2	IDC-SBL D ₁ D ₂			凶
SURROUND FROM LEFT	2	IDC-SLT D ₁ D ₂			匡
SURROUND FROM RIGHT	2	IDC-SRT D ₁ D ₂			丙
SURROUND FROM UPPER LEFT	2	IDC-SUL D ₁ D ₂			仄
SURROUND FROM UPPER RIGHT	2	IDC-SUR D ₁ D ₂			式
SURROUND FROM LOWER LEFT	2	IDC-SLL D ₁ D ₂			超
SURROUND FROM LOWER RIGHT	2	IDC-SLR D ₁ D ₂			氷

ISO/IEC 10646 7th Edition:2025 CD.2 (en)

Character Name: IDEOGRAPHIC DESCRIPTION CHARACTER ...	no. of DCs	IDS Acronym and Syntax	Relative posi- tions of DCs	Example of IDS	IDS example represents:
HORIZONTAL REFLECTION	1	IDC-HRF D ₁			
ROTATION	1	IDC-ROT D ₁			
SUBTRACTION	2	IDC-SUB D ₁ D ₂			
OVERLAID	2	IDC-OVL D ₁ D ₂			
NOTE In IDC-OVL, D ₁ and D ₂ overlap each other. This diagram does not imply that D ₁ is on the top left corner and D ₂ is on the bottom right corner.					

Annex J
(informative)

Recommendation for combined receiving/originating devices with internal storage

Annex J is applicable to a widely-used class of devices that can store received code unit sequences for subsequent retransmission.

This recommendation is intended to ensure that loss of information is minimized between the receipt of a code unit sequence and its retransmission.

A device of this class includes a receiving device component and an originating device component as in 4.3, and can also store received code unit sequences for retransmission, with or without modification by the actions of the user on the corresponding characters represented within it. Within this class of device, two distinct types are identified here, as follows.

- 1) **Receiving device with full retransmission capability.** The originating device component will retransmit the coded representations of any received characters, including those that are outside the identified subset of the receiving device component, without change to their coded representation, unless modified by the user.
- 2) **Receiving device with subset retransmission capability.** The originating device component can retransmit only the coded representations of the characters of the subset adopted by the receiving device component.

Annex K
(informative)
Notations of octet value representations

Representation of octet values in this document except in Clause 13 is different from other character coding standards such as ISO/IEC 2022, ISO/IEC 6429 and ISO 8859. Annex K clarifies the relationship between the two notations.

In this document, the notation used to express an octet value is z , where z is a hexadecimal number in the range 00 to FF. For example, the character ESCAPE (ESC) of ISO/IEC 2022 is represented in this document by 1B.

In other character coding standards, the notation used to express an octet value is x/y , where x and y are two decimal numbers in the range 00 to 15. The correspondence between the notations of the form x/y and the octet value is as follows.

- x is the number represented by bit 8, bit 7, bit 6 and bit 5 where these bits are given the weights 8, 4, 2 and 1 respectively.
- y is the number represented by bit 4, bit 3, bit 2 and bit 1 where these bits are given the weights 8, 4, 2 and 1 respectively.

For example, the character ESC of ISO/IEC 2022 is represented by 01/11.

Thus ISO/IEC 2022 (and other character coding standards) octet value notation can be converted to octet value notation used by this document by converting the value of x and y to hexadecimal notation. For example; 04/15 is equivalent to 4F.

Annex L (informative) Character naming guidelines

The Clause 29 of this standard specifies rules for name formation and name uniqueness. These rules are used in other information technology coded character set standards such as ISO/IEC 646, ISO/IEC 6937, ISO/IEC 8859, and ISO/IEC 10367. Annex L provides additional guidelines for the creation of these entity names.

These guidelines do not apply to the names of CJK ideographs, Tangut ideographs, Nüshu characters, Khitan Small Script character, Egyptian hieroglyphs part of the extended block, and Hangul syllables which are formed using rules specified in 29.6, 29.7, 29.8, 29.9, 29.10, and 29.12 respectively.

Guideline 1

The name of an entity wherever possible denotes its customary meaning (for example, the character name: PLUS SIGN or the block name: GURMUKHI).

Some entities, such as characters, may have a name describing shapes, not usage, (for example, the character name: UPWARDS ARROW).

The name on an entity is not intended to identify its properties or attributes, or to provide information on its linguistic characteristics, except as defined in guideline 4 below.

Guideline 2

An acronym consists of Latin capital letters A to Z and digits and is associated with a name.

Acronyms may be used in entity names where usage already exists and clarity requires it. For example, the names of control functions are coupled with an acronym.

EXAMPLES

Name: Acronym

LOCKING-SHIFT TWO RIGHT LS2R

SOFT HYPHEN SHY

INTERNATIONAL PHONETIC ALPHABET IPA

NOTE – In ISO/IEC 6429, the names of the modes have also been presented in the same way as control functions.

Guideline 3

Character names and Named UCS Sequence Identifiers (NUSI) only include digits 0 to 9 if spelling out the name of the corresponding digits(s) would be inappropriate.

NOTE As an example the name of the character at the code point value 201A is SINGLE LOW-9 QUOTATION MARK; the symbol for the digit 9 is included in this name to illustrate the shape of the character, and has no numerical significance.

Guideline 4

Character names and NUSIs are constructed from an appropriate set of the applicable terms of the following grid and ordered in the sequence of this grid. Exceptions are specified in guidelines 9 to 11. The words WITH and AND may be included for additional clarity when needed.

1	Script	5	Attribute
2	Case	6	Designation
3	Type	7	Mark(s)
4	Language	8	Qualifier

EXAMPLES OF SUCH TERMS

ISO/IEC 10646 7th Edition:2025 CD.2 (en)

Script	Latin, Cyrillic, Arabic
Case	capital, small
Type	letter, ligature, digit
Language	Ukrainian
Attribute	final, sharp, subscript, vulgar
Designation	customary name, name of letter
Mark	acute, ogonek, ring above, diaeresis
Qualifier	sign, symbol

EXAMPLES OF NAMES

LATIN CAPITAL LETTER A WITH ACUTE

1 2 3 6 7

DIGIT FIVE

3 6

LEFT

5 5 6

CURLY

BRACKET

NOTE A ligature is a graphic symbol in which two or more other graphic symbols are imaged as a single graphic symbol.

For character names, where a character comprises a base letter with multiple marks, the sequence of those in the name is the order in which the marks are positioned relative to the base letter. The sequence may start with the marks above the letters taken in upwards sequence and follow with the marks below the letters taken in downwards sequence, or the reverse (below/above).

For NUSIs, where the sequence comprises a base letter with multiple marks, the name describes the individual characters in the sequence in which they are encoded in the sequence.

EXAMPLES

Ô LATIN CAPITAL LETTER O WITH CIRCUMFLEX AND DOT BELOW

Ç LATIN CAPITAL LETTER C WITH CEDILLA AND ACUTE

Ų LATIN CAPITAL LETTER U WITH OGONEK AND ACUTE

Guideline 5

The letters of the Latin script are represented within their name by their basic graphic symbols (A, B, C, etc.). The letters of all other scripts are represented by their transcription in the language of the first published International Standard.

EXAMPLES

K LATIN CAPITAL LETTER K

Ю CYRILLIC CAPITAL LETTER YU

Guideline 6

In principle when a character of a given script is used in more than one language, no language name is specified. Exceptions are tolerated where an ambiguity would otherwise result.

EXAMPLES

И CYRILLIC CAPITAL LETTER I

І CYRILLIC CAPITAL LETTER BYELORUSSIAN-UKRAINIAN I

Guideline 7

Letters that are elements of more than one script are considered different even if their shape is the same; they have different names.

EXAMPLES

A LATIN CAPITAL LETTER A

Α GREEK CAPITAL LETTER ALPHA

А CYRILLIC CAPITAL LETTER A

Guideline 8

Where possible, NUSIs are constructed by appending the names of the constituent elements together while eliding duplicate elements. Should this process result in a name that already exists, the name is modified suitably to guarantee uniqueness among character names and NUSIs. The words WITH and AND may be included for additional clarity when needed.

Guideline 9

A character of one script used in isolation in another script, for example as a graphic symbol in relation with physical units of dimension, is considered as a character different from the character of its native script.

EXAMPLE

μ MICRO SIGN

Guideline 10

A number of characters have a traditional name consisting of one or two words. It is not intended to change this usage.

EXAMPLES

'	APOSTROPHE
:	COLON
@	COMMERCIAL AT
_	LOW LINE
~	TILDE

Guideline 11

In some cases, characters of a given script, often punctuation marks, are used in another script for a different usage. In these cases, the customary name reflecting the most general use is given to the character. The customary name may be annotated in the list of characters with the script name followed by the transliterated name in that script.

EXAMPLE

203F  UNDERTIE
= Greek Enotikon

Annex M

Sources of characters

NOTE Replaced by the Unicode Reference Lists at <https://www.unicode.org/references/>

Annex N
(informative)
External references to character repertoires

N.1 Methods of reference to character repertoires and their coding

Within programming languages and other methods for defining the syntax of data objects there is commonly a need to declare a specific character repertoire from among those that are specified in this document. There may also be a need to declare the corresponding coded representations applicable to that repertoire.

For any character repertoire that is in accordance with this document a precise declaration of that repertoire should include the following parameters:

- identification of ISO/IEC 10646,
- the adopted subset of the repertoire, identified by one or more collection numbers,
- the code unit sequence content definition,
- the adopted encoding form (UTF-8, UTF-16, or UTF-32).

One of the methods now in common use for defining the syntax of data objects is Abstract Syntax Notation 1 (ASN.1) specified in ISO/IEC 8824. The corresponding coded representations are specified in ISO/IEC 8825. When this method is used the forms of the references to character repertoires and coding are as indicated in the following clauses.

N.2 Identification of ASN.1 character abstract syntaxes

The set of all character strings that can be formed from the characters of an identified repertoire in accordance with this document is defined to be a “character abstract syntax” in the terminology of ISO/IEC 8824. For each such character abstract syntax, a corresponding object identifier value is defined to permit references to be made to that syntax when the ASN.1 notation is used.

ISO/IEC 8824-1 Annex D specifies the form of object identifier values for objects that are specified in an ISO standard. In such an object identifier the features and options of this document are identified by means of numbers (arcs) which follow the arcs “10646” and “0” which identify the whole ISO/IEC 10646.

NOTE 1 The arc (0) is required to complement the arcs (1) and (2) which represent respectively ISO/IEC 10646-1 and ISO/IEC 10646-2. These two arcs should not be used.

The first such arc following a 10646 arc identifies the code unit sequence content definition, and is referred as ‘level-3 (3)’.

NOTE 2 This version of the standard specifies a single definition for code unit sequence content. That definition was formerly known as implementation level 3 in previous editions of this standard

The second such arc identifies the repertoire subset, and is either

- all (0), or
- collections (1).

Arc (0) identifies the entire collection of characters specified in this document. No further arc follows this arc.

NOTE 3 This collection includes private planes, and is therefore not fully-defined. Its use without additional prior agreement is deprecated.

Arc (1) is followed by one or a sequence of further arcs, each of which is a collection number from Annex A, in ascending numerical order. This sequence identifies the subset consisting of the collections whose numbers appear in the sequence.

NOTE 4 As an example, the object identifier for the subset comprising the collections BASIC LATIN, LATIN-1 SUPPLEMENT, and MATHEMATICAL OPERATORS is:

ISO/IEC 10646 7th Edition:2025 CD.2 (en)

{iso standard 10646 (0) level-3 (3) collections (1) 1 2 39}

ISO/IEC 8824 also specifies object descriptors corresponding to object identifier values. For an unrestricted repertoire, the corresponding object descriptor is as follows:

3 0 : "ISO 10646 level-3 unrestricted"

For a single collection with collection name "xxx".

3 1 : "ISO 10646 level-3 xxx"

For a repertoire comprising more than one collection, numbered m1, m2, etc.

3 1 : "ISO 10646 level-3 collections m1, m2, m3, .. "

NOTE 5 All spaces are single spaces.

N.3 Identification of ASN.1 character transfer syntaxes

The coding method for character strings that can be formed from the characters in accordance with this document is defined to be "character transfer syntax" in the terminology of ISO/IEC 8824. For each such character transfer syntax, a corresponding object identifier value is defined to permit references to be made to that syntax when the ASN.1 notation is used.

In an object identifier in accordance with ISO/IEC 8824-1 Annex B, the coded representation form specified in this document is identified by means of numbers (arcs) which follow the arcs "10646" and "0" which identify the whole ISO/IEC 10646.

The first such arc is

transfer-syntaxes (0).

The second such arc identifies the encoding form and is either

four-octet-form (4) for the UTF-32 encoding form, or
utf16-form (5) for the UTF-16 encoding form, or
utf8-form (8) for the UTF-8 encoding form.

NOTE 1 As an example, the object identifier for the UTF-32 encoding form is:

{iso standard 10646 (0) transfer-syntaxes (0) four-octet-form (4)}

The following object identifier is also valid but deprecated:

{iso standard 10646 (1) transfer-syntaxes (0) four-octet-form (4)}

NOTE 2 Previous versions of this standard supported a two-octet-BMP-form (2) arc which is now deprecated.

The corresponding object descriptors are:

"ISO 10646 form 4"

"ISO 10646 utf-16"

"ISO 10646 utf-8".

NOTE 3 Previous versions of this standard supported the "ISO 10646 form 2" object descriptor which is now deprecated.

Annex P

(informative)

Additional information on CJK Unified ideographs

Annex P contains additional information on CJK Unified ideographs.

NOTE The first edition of this document (ISO/IEC 10646:2003 and amendments 1 to 5) used this annex to provide additional information on all characters. This edition of the standard includes most of that information in the code charts. Because the code charts for CJK Unified ideographs do not include any name list, the information about these characters is still included here.

Each entry in the table P.1 consists for each row of an extract of the CJK Unified ideograph code point entry in the code chart, followed in the next column by the related additional information. Entries are arranged in ascending sequence of code point.

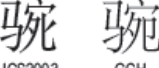

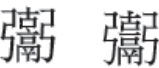

Table P.1: Additional information on CJK Unified ideographs

UCS / Glyph	Additional information
9FB9 八 12.4 𠂇 G9-FE7E	These three characters are intended to represent a component at a specific position of a full ideograph. The ideographs representing the same structure without a preferred positional preference are encoded at 20509 𠂇, 2099D 𠂈, and 470C 𠂉 respectively.
9FBA 十 24.6 𠂈 G9-FE90

2A6C0 <small>龜 213.8</small>  <small>UCS2003 GKX-1538.20 T5-7B5E</small>	GKX-1538.20 source glyph was mistakenly unified to this code point.

The Japanese Industrial Standard JIS X 0213:2004 includes a set of characters which were part of previous JIS standards. The set consists of 2828 characters, of which 2743 were part of JIS X 0212-1990 (referred as J1 sources in the previous version of this document) and 85 were part of the 'Unified Japanese IT Vendors Contemporary Ideographs, 1993' (referred as JA in the previous version of this document). Among these 2828 characters, 205 had their glyph representation slightly modified. These 2828 characters use the 'J13, J13A, J14, JA3, and JA4' notations in their prefix four source identification as described in 24.1. Their glyph representation also reflects the one shown in JIS X 0213:2004. The set of these 2828 characters is further defined as the fixed collection 374 (see A.4.5).

Annex Q
(informative)
Code mapping table for Hangul syllables

NOTE The information concerning mapping between Hangul syllables (and code points) that were specified in the first edition of ISO/IEC 10646-1 and their amended code points is available in previous editions of this standard.

Annex R
(informative)
Names of Hangul syllables

Annex R provides the full name and annotation of Hangul syllables through a linked file:

<https://standards.iso.org/iso-iec/10646/ed-7/en/HangulSy.txt>.

The content linked to is a plain text file, encoded as UTF-8 with CARRIAGE RETURN/ LINE FEED as end of line mark that specifies, after a 6-lines header, as all the Hangul syllables, each line specified as follows:

- 01-04 octet: code point in hexadecimal notation,
- 05 octet: SPACE character,
- 06 octet until end of line: Hangul syllable with the annotation between parenthesis.

Annex S (informative)

Procedure for the unification and arrangement of CJK ideographs

The graphic character collections of CJK Unified ideographs in this document are specified in Clause 36. They are derived from many more ideographs which are found in various different national and regional standards for coded character sets (the "sources").

Annex S describes how the ideographs in this standard are derived from the sources by applying a set of unification procedures. It also describes how the ideographs in this standard are arranged in the sequence of consecutive code points to which they are assigned.

The source references for CJK Unified ideographs are specified in Clause 24.

Within the context of this document a unification process is applied to the ideographic characters taken from the codes in the source groups. In this process, single ideographs from two or more of the source groups are associated together, and a single code point is assigned to them in this standard. The associations are made according to a set of procedures that are described below. Ideographs that are thus associated are described here as "unified".

NOTE The unification process does not apply to the following collections of ideographic characters:

CJK RADICALS SUPPLEMENT (2E80 - 2EFF)

KANGXI RADICALS (2F00 - 2FDF)

CJK COMPATIBILITY IDEOGRAPHS (F900 - FAFF with the exception of FA0E, FA0F, FA11, FA13, FA14, FA1F, FA21, FA23, FA24, FA27, FA28 and FA29)

CJK COMPATIBILITY IDEOGRAPHS SUPPLEMENT (2F800-2FA1F).

S.1 Unification procedure

S.1.1 Scope of unification

Ideographs that are unrelated in historical derivation (non-cognate characters) have not been unified.

EXAMPLE

NOTE The difference of shape between the two ideographs in the above example is in the length of the lower horizontal line. This is considered an actual difference of shape. Furthermore, these ideographs have different meanings. The meaning of the first is "Soldier" and of the second is "Soil or Earth".

An association between ideographs from different sources is made here if their shapes are sufficiently similar, according to the following system of classification.

S.1.2 Two level classification

A two-level system of classification is used to differentiate (a) between abstract shapes and (b) between actual shapes determined by particular typefaces. Variant forms of an ideograph, which can not be unified, are identified based on the difference between their abstract shapes.

S.1.3 Procedure

A unification procedure is used to determine whether two ideographs have the same abstract shape or different ones. The unification procedure has two stages, applied in the following order:

- a) Analysis of component structure;
- b) Analysis of component features;

S.1.3.1 Analysis of component structure

In the first stage of the procedure the component structure of each ideograph is examined. A component of an ideograph is a geometrical combination of primitive elements. Alternative ideographs can be configured from the same set of components. Components can be combined to create a new component with a more complicated structure. An ideograph, therefore, can be defined as a component tree, where the top node is the ideograph itself, and the bottom nodes are the primitive elements. This is shown in Figure S.1.

Figure S.1 - Component structure

S.1.3.2 Analysis of component features

In the second stage of the procedure, the components located at corresponding nodes of two ideographs are compared, starting from the top level, as shown in Figure S.2.

Figure S.2 - The most superior node of a component

The following features of each ideograph to be compared are examined:

- the number of components,
- the relative position of the components in each complete ideograph,
- the structure of corresponding components.

If one or more of the features a) to c) above are different between the ideographs in the comparison, the ideographs are considered to have different abstract shapes and are therefore not unified.

If all of the features a) to c) above are the same between the ideographs, the ideographs are considered to have the same abstract shape and are therefore unified.

S.1.4 Examples of differences of abstract shapes

To illustrate rules derived from a) to c) in S.1.3.2, some typical examples of ideographs that are not unified, owing to differences of abstract shapes, are shown below.

S.1.4.1 Different number of components

The examples below illustrate rule a) since the two ideographs in each pair have different numbers of components.

崖•厓, 肱•肱, 降•夆

S.1.4.2 Different relative positions of components

The examples below illustrate rule b). Although the two ideographs in each pair have the same number of components, the relative positions of the components are different.

峰·峯, 荊·荊

When the ideographs consists of two horizontally aligned components, a difference of the last stroke of the left-hand component going beneath the right-hand component should not warrant separate encoding, as in the case of the source glyphs for U+34F3:

剝·剝

S.1.4.3 Different structure of a corresponding component

The examples below illustrate rule c). The structure of one (or more) corresponding components within the two ideographs in each pair is different.

扌.擴, 策.筴, 𤇆.𤇇, 圣.聖, 僉.僉, 區.區, 夾.夾,
 單.單, 萑.萑, 𦍋.𦍋, 贊.贊, 襄.襄, 隹.隹, 間.間,
 朶.朶, 雋.雋, 恒.恆, 奂.奂, 人.人, 冢.冢, 爰.爰

S.1.5 Differences of actual shapes

To illustrate the classification described in S.1.2, some typical examples of ideographs that are unified are shown below. The two or more ideographs in each group below have different actual shapes, but they are considered to have the same abstract shape and are therefore unified on their own or as component in larger ideographs. The differences are classified according to the following examples.

- a) Differences in rotated strokes/dots

半·半, 勺·勺, 羽·羽·羽, 酋·酋, 兼·兼, 益·益, 每·每

- b) Differences in overshoot at the stroke initiation or termination

身·身, 雪·雪, 拐·拐, 不·不, 非·非, 周·周, 告·告

- c) Differences in contact of strokes

奧·奧, 酉·酉, 兕·兕, 查·查, 奔·奔

- d) Differences in protrusion at the folded corner of strokes

巨·巨，成·成

- e) Differences in bent strokes

西・面

- f) Differences in folding back at the stroke termination

朱·朱

g) Differences in accent at the stroke initiation

父·父, 丈·丈, 夂·夂

h) Differences in "rooftop" modification

八·八, 宀·宀

i) Addition or omission of a minor stroke

步·步, 者·者, 臭·臭, 呂·呂, 單·單

j) Combinations of the above differences

刃·刃·刃, 直·直, 鼎·鼎

k) Miscellaneous

乚·乚·乚, 示·示·示, 艮·艮·艮, 食·食·食, 黃·黃, 盥·盥, 曷·曷, 包·包, 青·青, 冊·冊, 爭·爭, 畺·畺·畺, 录·录, 并·并, 骨·骨, 吳·吳·吳, 眞·眞·眞, 爲·為, 曾·曾·曾, 專·專, 內·內, 晉·晋, 龜·龜, ++·++

NOTE – Some of the group items are unified when used as components in more complex ideographs, but are not unified themselves for other reasons, such as the source separation rule.

These differences in actual shapes of a unified ideograph are presented in the corresponding source columns for each code point entry in the code charts in Clause 36 of this document.

S.1.6 Source separation rule

To preserve data integrity through multiple stages of code conversion (commonly known as “round-trip integrity”), any ideographs that are separately encoded in any one of the source standards listed below have not been unified.

G-source:	GB2312-80, GB12345-90, GB7589-87*, GB7590-87*, GB8565-88*, General Purpose Hanzi List for Modern Chinese Language*
T-source:	TCA-CNS 11643-1986/1st plane, TCA-CNS 11643-1986/2nd plane, TCA-CNS 11643-1986/14th plane*
J-source:	JIS X 0208-1990, JIS X 0212-1990
K-source:	KS X 1001:2004 (previously KS C 5601-1989), KS X 1002:2001 (previously KS C 5657-1991)

NOTE 1 The characters from the J source: JIS X 0212-1990 encoded in this document are listed in the collection 372 JAPANESE IDEOGRAPHICS SUPPLEMENT.

NOTE 2 A " " after the reference number of a standard indicates that some of the ideographs included in that standard are not introduced into the unified collection.

However, some ideographs encoded in two standards belonging to the same source group (e.g. GB2312-80 and GB12345-90) have been unified during the process of collecting ideographs from the source group.

The source separation rule described in S.1.6 only applies to the CJK UNIFIED IDEOGRAPHS block specified in the Basic Multilingual Plane.

NOTE 3 CJK Compatibility ideographs are created following a rule very similar to the source separation rule. However, the end result is the combination of a single CJK Unified ideograph and one or several CJK Compatibility ideographs. When the source separation rule is applied, all ‘similar’ source CJK ideographs result in separate CJK Unified ideographs.

S.2 Arrangement procedure

S.2.1 Scope of arrangement

The arrangement of the CJK Unified ideographs in the code charts of Clause 36 of this document is based on the filing order of ideographs in the following dictionaries.

Priority	Dictionary	Edition
1	Kangxi Dictionary 康熙字典	Beijing 7 th edition
2	Daikanwa Jiten 大漢和辭典	9 th edition
3	Hanyu Dazidian 漢語大字典	1 st edition
4	Daejaweon 大字典	1 st edition

The dictionaries are used according to the priority order given in the table above. Priority 1 is highest. If an ideograph is found in one dictionary, the dictionaries of lower priority are not examined.

S.2.2 Procedure

S.2.2.1 Ideographs found in the dictionaries

- If an ideograph is found in the Kangxi Dictionary, it is positioned in the code chart in accordance with the Kangxi Dictionary order.
- If an ideograph is not found in the Kangxi Dictionary but is found in the Daikanwa Jiten, it is given a position at the end of the radical-stroke group under which is indexed the nearest preceding Daikanwa Jiten character that also appears in the Kangxi dictionary.
- If an ideograph is found in neither the Kangxi nor the Daikanwa, the Hanyu Dazidian and the Daejaweon dictionaries are referred to with a similar procedure.

S.2.2.2 Ideographs not found in the dictionaries

If an ideograph is not found in any of the four dictionaries, it is given a position at the end of the radical-stroke group (after the characters that are present in the dictionaries) and it is indexed under the same radical-stroke count.

S.3 Source separation examples

The pairs (or triplets) of ideographs shown below are exceptions to the unification rules described in S.1. They are not unified because of the source separation rule described in S.1.6.

NOTE 1 The particular source group (or groups) that causes the source separation rule to apply is indicated by the letter (G, J, K, or T) that appears to the right of each pair (or triplet) of ideographs. The source groups that correspond to these letters are identified in S.1.6.

NOTE 2 Seven pairs described below have J sources which were originally part of the JIS X 212-1990 level-3, therefore covered by the Source separation rule, which are also part of the JIS X 213:2004 with source identified as J13. The pairs (J13 character code points emphasized) are: **U+5861-U+586B**, **U+6483-U+64CA**, **U+75E9-U+7626**, **U+83D1-U+8458**, **U+848B-U+8523**, **U+91A4-U+91AC**, and **U+985A-U+985B**.

S.4 Non-unification examples

In accordance with the unification procedures described in S.1, the pairs (or triplets) of ideographs shown below are not unified. The reason for non-unification is indicated by the reference which appears to the right of each pair (or triplet). For “non-cognate” see S.1.1.

NOTE – The reason for non-unification in these examples is different from the source separation rule described in S.1.6.

Language tagging using Tag Characters

NOTE Moved to F.8.

Annex U
(informative)
Characters in identifiers

A common task facing an implementer of UCS is the provision of a parsing and/or lexing engine for identifiers. Each programming language standard has its own identifier syntax; different programming languages have different conventions for the use of certain characters from the ASCII (ISO 646-IRV) range (\$, @, #, _) in identifiers. Questions as to which characters to use for syntactic purposes versus which to be allowed in identifiers, whether case-pairing should be included, normalization should be performed, and other factors enter into the picture when defining the set of permitted characters for a given identification purpose.

The Unicode Consortium publishes a document "UAX 31 – Identifier and Pattern Syntax" to assist in the standard treatment of identifiers in UCS character-based parsers. Those specifications are recommended for determining the list of UCS characters suitable for use in identifiers. The document is available at <http://www.unicode.org/reports/tr31/>.
