Doc Type: Ideographic Research Group Document
Title: Consolidated SC and FS guidelines for IWDS
Source: Eiso Chan (陈永聪, Culture and Art Publishing House)
Status: Individual Contribution for IRG #66
Action: For consideration by IRG
Date: 2025-12-03

After submitting IRG N2862 to IRG, I received several feedback comments from different IRG experts: Henry CHAN, CHEN Xiaoyan, CHEN Zhuang, HUANG Junliang, Ken LUNDE. The pending issues have also been resolved.

1. Structure

The structure of the table inherited the one of IRG N2862 basically, but I updated the syntax of the Entry column and removed the Note column.

For Entry column, the syntax is `\d{1,2}[DHOPSZ][a-z]`. There are three parts: 1) the Western Arabic Numeral sequence means the SC value; 2) the upper Latin letter means the FS value, H=横, S=豎/豎/竖, P=撇, D=點/点, Z=折, O=〇; 3) the lower Latin letter means the ordering.

For Shape and Variants columns, the proper glyph matched SC and FS is set on Shape column, and other related glyphs are set on Variants column.

For FS column, there are six kinds of values here. 一 (1), | (2), J (3), 、 (4) and 乙 (5) follow Annex K of [IRG P&P](#) (no 0 and 6 here), and dotted circle means the uncertain value which needs to count the situation of the dotted circle part in the glyphs.

For SC column, "<value> + dotted circle" means the uncertain value which needs to count the stroke with the dotted circle component together; other values should be used directly.

2. Reference documents

IRG N954AR	First residual strokes & stroke counts
IRG N1105	Amendments to IRG N954AR
IRG N2171	Stroke Counting Guidelines
IRG N2221	Stroke Counting Guidelines
IRG N2862	Proposal to create consolidated SC and FS guidelines for IWDS
IRG N2915	Comments about the FS values in <IRG N2862, Proposal to create consolidated SC and FS guidelines for IWDS, Eiso CHAN>

For IRG N2915, this document has not yet been discussed in an IRG meeting. This revision has not been modified based on that document, and the following are responses to Prof. Kim:

- 1) All previous versions of IRG documents that prescribed FS values — IRG N954AR from 2002 and IRG N1105 from 2005 — made no mention of radicals whatsoever, so why wait over 20 years to provide such feedback?
- 2) Due to the necessarily prescriptive nature of this document, differentiating between radical and non-radical components is unnecessary.
- 3) FS values, which will no longer be required for submissions to the IRG, will now be used mainly by the IRG Chief Editor for adjusting FS values, but are still useful to include.

3. Future additions

There are more comments on the future additions, and I list them as below. If IRG has consensus, they will be added in the future version.
