Doc Type: ISO/IEC JTC1/SC2/WG2/IRG
 Title: UK response to IRGN2918 Proposal to update the reference glyphs for 2 UK-source ideographs
 Source: John Knightley
 Status: Member Body Contribution
 Action: For consideration by IRG
 Date: 13/10/26

The UK has no objection to the two glyph changes suggested, whilst keeping the same source references, provided that it is agreed that the current and changed whole character forms are unifiable. As shown below in red the difference in glyphs is suitable for whole character unification.

UCS		Suggested			
Code Point	Glyph	Glyph	IDS	RS	TS
U+3062B				75.14	18
U+30C68				140.8	12

Table 1: Proposed reference character and metadata changes

Whole character unification would permit horizontal extension by other members and would not imply that the component parts are unifiable - it would not imply that either 日 and 耳, 晴 and 晴, 正 and 止, or 炏 and 炏 are unifiable.

UK-02988 and UK-02901 were submitted with a single piece of evidence and the representative glyphs match that glyph in accordance with the guidelines and common practice for evidences at the time. It is noted that the current guidelines are for multiple pieces of evidence as the norm under which it is less likely for there to be a need to change representative glyphs after encoding.
