(Note: This document is an update to document L2 06-248 (WG2 N3130 dated 2006-07-27; a note regarding ballot comments is additionally proposed.)

### Background

Since the first publication of ISO/IEC 10646 implementation of the standard has come a long way. Most of the implementations now have full support for combining characters and associated compositions for complex scripts. The initial reason for having three different implementation levels in the standard and the need to identify the level needed to support a proposed script has essentially disappeared.

The feedback received from users of the Proposal Summary Form and the Principles and Procedures document is that 'the question on levels should be removed', since it has outlived its usefulness and relevance (in Part B - Technical, General part of the Proposal Summary Form). It reads as:

4. Proposed Level of Implementation (1, 2 or 3) (see Annex K in P&P document):

Is a rationale provided for the choice?

If Yes, reference:

### Proposal

1. It is proposed that the above question and associated annex information from the Principles and Procedures document related to Levels of Implementation in the standard - Level 1, 2 or 3 be removed. As a consequence, Questions 5 through 9 in Part B of the form will be renumbered to 4 through 8. A sample of the revised first page of the form is attached.
2. In addition the following note is proposed for inclusion in the 'Information accompanying the proposal summary form' to draw the attention of national bodies:

Note: National bodies should restrict their ballot comments to the content of the document under ballot. All proposals for new characters or new material for the standard should be made as independent contributions outside the ballot comments. The project editor has the prerogative of ruling such proposals to be 'out of order, as not related to the text under ballot' and ignore them completely.
