Subject: Lists of Duplicate Hanja Characters in KS X 1001
        (version 10: 2008.04.05)

1. Background

  - In KS X 1001, there are 4,888 Hanja characters. However, there many
characters whose glyphs are one and the same. They were allocated different
code positions due to the fact that they have different readings or
pronunciations.

  - This document shows the list of duplicate Hanja characters, their code
positions in KS X 1001 and UCS (= ISO/IEC 10646), mapping table between KS X
1001 and UCS, etc.

  - The ranges of code positions in UCS are shown below:

  1) U+4E00 ~ U+9FA5: CJK Unified
  2) U+3400 ~ U+4DB5: CJK Extension A
  3) U+F900 ~ U+FA0B: CJK Compatibility Ideo. (for KS X 1001)

2. The number of code positions allocated to some Hanja glyphs in KS X 1001

2.1 Four code positions are allocated to one Hanja glyph.
  - 樂 악 [낙 락 요] // Ag [Nag, Rag, Yo]
  - Only one code position (a base character) in KS X 1001 is mapped to CJK
Unified and the other three code positions are mapped to CJK Comp. (U+Fxxx).

2.2 Three code positions are allocated to each of four Hanja glyphs.
  - 1) 龜 구 [귀 균] // Gu [Gwi, Gyun]
    2) 寧 녕 [령 영] // Nyeong [Ryeong, Yeong]
    3) 率 률 [솔 율] // Ryul [Sol, Yul]
   4) 說 설 [세 열] // Seol [Se, Yeol]

  - For each of the four glyphs, only one code position (a base character) in KS X 1001 is mapped to CJK Unified and the other two code positions are mapped to CJK Comp. (U+Fxxx).

2.3 Two code positions are allocated to each of 257 Hanja glyphs.
  - For each of the 257 glyphs, only one code position (a base character) in KS X 1001 is mapped to CJK Unified and the other one code position is mapped to CJK Comp. (U+Fxxx).
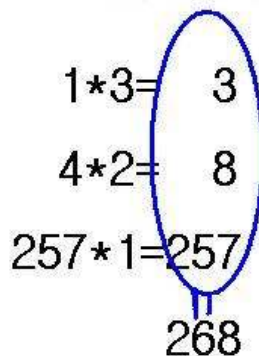

2.4 Two or more code positions are allocated to each of 262 (= 1 + 4 + 257) Hanja glyphs in KS X 1001

3. The number of Hanja characters in KS X 1001
  - There are 4,888 Hanja characters in KS X 1001.
  - However, 268 (= 1*3 + 4*2 + 257*1) Hanja characters are duplicate and are mapped to CJK Comp. (U+F900 ~ U+FA0B).
  - Therefore, there are only 4,620 (= 4,888 - 268) distinct (or non-duplicate) Hanja glyphs in KS X 1001.

4. Initial Law and duplicate Hanja characters
  - Many Hanja characters are allocated two or more code positions according to Initial Law.
  - In Table 1 below, when a duplicate Hanja character has another pronunciation according to Initial Law, it flagged as "=더"; otherwise, it is flagged as "*밖".
  - Out of 268 duplicate Hanja characters which are mapped to CJK Comp., 208 (78%) are according to Initial Law, and the other 60 (22%) are not.

5. Table 1: Duplicate to Non-duplicate/Duplicate Hanja Cross-Ref Table for KS X 1001
  - There is one line for each of 268 duplicate Hanja characters in KS X 1001
(which are mapped to CJK Comp (U+F900 ~ U+FAOB).
  - There are 268 lines (= entries).
  - The lines are ordered in ascending order of code positions in KS X 1001.
    (They happen to be ordered in ascending order of code positions in UCS.)

  = An explanation of the format of Table 1

    An example line:

```
 1  2  3  4      5       6       7  8  9  10 11     12      13      14 15
*밝 43 48 0xCBD0 0x4B50 U+F900 豈 개 49 34 0xD1C2 0x5142 U+8C48 豈 기
```

    col. 1) whether or not according to Initial Law

    Data in columns 2 ~ 8 are information about a duplicate Hanja character
(mapped to CJK Comp.):
    col. 2) row number in KS X 1001
    col. 3) column number in KS X 1001
    col. 4) a code position in KS X 1001 with msb=0
    col. 5) a code position in KS X 1001 with msb=1
    col. 6) a code position in UCS-2
    col. 7) a Hanja glyph
    col. 8) a pronunciation in Hangeul

    Data in columns 9 ~ 15 are a repetition of those in columns 2 ~ 8 and are
information about a non-duplicate Hanja character with the same glyph.
    If there is a second (and a third) duplicate Hanja character, then there are
more data in columns 16 ~ 22 (and in columns 23 ~ 29) in a similar manner. At
end of a line corresponding to these characters, there is "[3]" (or "[4]")
indicating the number of code positions allocated to the glyph.

6. Table 2. Non-duplicate to Duplicate Hanja Cross-Ref Table for KS X 1001

  - There is one line for each of 262 non-duplicate Hanja characters in KS X
1001 (which are mapped to CJK Unified).
  - There are 262 lines (= entries).
  - The lines are ordered in ascending order of code positions in KS X 1001.

  = An explanation of the format of Table 2
    The format is almost the same as that of Table 1 with some differences:
    1) The data in column 1 of Table 1 is missing in Table 2.
    2) Data in columns 1 ~ 7 in Table 2 are information about a non-duplicate
Hanja character (mapped to CJK Unified); Data in the remaining columns in Table
2 are information about a duplicate Hanja character (mapped to CJK Comp.)
