Title: Toward a proposal for encoding the Miao script in the SMP of the UCS

Source: Michael Everson, Erich Fickle, and Martin Hosken

Status: Individual Contribution

Action: For consideration by JTC1/SC2/WG2 and UTC

Replaces: N3669 Date: 2010-01-28

This is not a complete proposal, but is offered to get feedback while a complete proposal is being developed.

1. Introduction. Miao is the short name of the Lao Miaowen script. There are many Miao orthographies, but most use Latin letters and do not pose any character encoding concerns. The Miao script was created by the Englishman Samuel Pollard, Miao people Wang Mingji, John Zhang, and James Yang, as well as Han intellectual Stephen Lee during 1904 at Stone Gateway, Weining County, western Guizhou Province, China. It adopted some Cree graphemes, some Latin letter variants, some English shorthand characters, as well as some Miao pictographs. The main principle is to represent initials (usually consonants) with larger letters, finals (mostly vowels) with smaller letters, and with tones represented by various placement of the small letters relative to the big letter. This system is simple to use, but many Chinese scholars thought that the few phonological tone positions cannot completely express the many phonetic tones of the Miao language. Also, it was a challenge to set lead type with these letters. Therefore, in the early 1950s Yang Rongxin and other Miao people from Weining in Guizhou attempted a reform by designing tone marks and designating the bottom-right position of the big letter as the only tone mark position. This reform did not see much support from the Miao people. Later Miao people from Kunming City and Chuxiong Prefecture adopted Yang Rongxin's approach and devised what they called the Normalised writing system. Therefore, the Miao script is comprised of two orthographic styles. Since both systems are in current use, this encoding proposal covers both tone marking systems of the Miao script.

Originally, this script was mainly used by the Northeastern Yunnan Miao. Later, various other Miao dialects began to use it as well. In addition, some people from the Yi, and the Lisu nationalities in Luquan, Yunnan also use this script to write their languages. The estimated user population of the multiple language groups is between 200,000 and 500,000. Extensive literature, bilingual education materials and elementary textbooks have been published in the Miao Script.

2. Structure. The Miao script is written from right to left. Used for tonal languages, Miao divides each syllable into an initial and a final. The initial is usually the initial consonant (or consonant cluster) and the final consists of the vowel cluster and the tone. Nasalization and voicing can be considered as qualities of the whole syllable and are marked on the initial rather than the final. Nasalization is marked by a noncombining letter; asipration is a combining mark. In Chuxiong style Ahmao orthography, a vowel is written on the baseline, followed by a tone mark; in most orthographies, the vowel is written at different heights and positions (above, top-right, right, bottom-right, below) indication the tone.

The syllable structure is: (N)C(M)V(V(V))(S/T), where N is the nasalizer, C is the obligatory consonant, M is a modifier (there is an aspiration mark in current use and two archaic voicing marks), V is one obligatory vowel mark which may be followed by two more, S is a "shifting" character which controls the height of the vowel (all vowels being moved to the same height and position), and T is a tone mark; S and T do not co-occur on a syllable.

- **3. Punctuation and digits.** Users of the Miao script freely employ punctuation marks from both Chinese and Latin scripts. No new encodings for punctuation are required. European digits are used.
- **4. Line breaking and word breaking.** Line breaks occur in place of spaces or after punctuation. A line break may not be inserted within a Miao syllable, or before punctuation immediately following a Miao syllable. There is no line breaking hyphenation. Word breaking occurs only before an initial consonant (N)C. Polysyllablic words are common.
- **5. Rendering: the "wart".** A number of characters in the code charts are drawn with a half-ring fused into the glyph. This "wart" represents a pronunciation which may be voicing or half voicing or lenition or some other sort of "reduced tension". The wart is often drawn on the left side of a character, but if the base grapheme is hollow on the right side, the "wart" sometimes is applied to the right to reduce space used in printing. In the Chuxiong style of writing, the wart is not written, but instead a dot is drawn immediately after the character. Some Yi users do the same thing with a vertical stroke mark resembling a serif on the letters. A given word in a particular dialect can be written with a wart, a dot, or (rather more rarely and with little standardization) the serif-like mark, or without being considered a spelling change. Some documents have been published in both "wart" and "dot-like" forms for different user communities. In any case, because the users claim that these are simply different ways to write the same characters, the warted characters have been encoded, with the proviso that their glyph shapes may vary in implementation.
- **6. Rendering: the rimes.** In Chuxiong orthography, the letters representing vowels and final nasals rest on the baseline (indicating Tone 3), and an additional tone mark is used following the vowel sign(s) to indicate other tones. In Ahmao and other orthographies, a special formatting character ("S" for "shifter" as described above) is used, following the last of the vowel letters when it is to be rendered above the base letter, or to the top left of the base letter, or to the right of the base letter, or below the base letter. When more than one rime character precedes the shifter, all of the glyphs are shifted together to the appropriate position.
- **7. Collating order: the onsets.** Wide variation between user groups occurs in the collating order, and so it has been decided to devise a default ordering, reflected in the code table, which is based on an ordering widely used in China and reflected in the order of the Bopomofo phonetic characters. Nasalization and aspiration is taken into account in ordering the initials; the ordering of *attested* consonants is as follows:

```
 \exists \ p > \exists \ b > \bot^{\vee_1} p > \bot^{\vee} p^h > C \bot mp > C \bot mb > C \bot^{\vee} mp^h > \exists \ pl > \exists^{\vee} p^h | > \supset m > > \cap {}^{\text{ARCH}} m > \Im m^h > \supset^{\vee} m_p > \Gamma f > \\ \forall \ v > \forall \ y > \top \ t > \top \ d > \top^{\vee_1} t > \top^{\vee_1} t > \top^{\vee_1} t^h > C \top \ nt > C \top \ nd > C \top^{\vee} \ nt^h > \top \ t > \top \ d > \top^{\vee} t^h > C \top \ nt > C \top \ nd > C \top^{\vee} \ nt^h > C \cap n > \cup {}^{\wedge} n > C \cap n^h > C^{\vee} \ n^h > C \cap n^h > C
```

Note that the archaic characters sort secondarily, as $C n >> U n > C n\hbar$. Note too that not all combinations have been attested, so for instance $V' v^{\hbar}$ is not listed above. As all of the aspirated characters (and those with archaic 'and ,) are composed this should not be problematic; the significant thing to handle is the treatment of the nasalizing C, which is different from the consonant C na. In principle, sorting even for consonants which are unattested with the nasalizing C should be implemented; the nasalizer has otherwise no sorting position of its own. Symbolically, it can be said that C > G > CM > GM > NC > NG > NCM > NGM (where C is a warted consonant) should be accounted for in ordering for each consonant class. So while only C is a warted consonant, the sort table should also handle the nasalized forms C is C if C

7. Collating order: the rimes. Wide variation between user groups occurs in the collating order here as well, and again the order of the Bopomofo phonetic characters has been broadly followed; the exception is that the finals -an, en, ang, and -eng have been shifted forward, because this makes better sense in terms of the structure of Miao itself. The basic order is a o we exp i u y o x ai ei au ou n y. Since some vowels are fused as ligatures and some vowels are multipart, the fused characters are ordered as though they were separate, with the ligatures preceding or following their unfused counterparts (it does not matter which so long as it is done consistently). Many of the ligatures are no longer used and are encoded for historical purposes; ligation is not productive. Here are the base characters:

```
A
      AA
                 (as A + U)
