January 26, 2015

1 Introduction

A request to include Soyombo in the Unicode standard, also known as the Universal Character Set (ISO/IEC 10646), was made by the Mongolia and Japan national bodies in September 1998 (see document WG2 N1855 L2/98-358). An update on the request was provided in January 2000 by Takayuki K. Sato of Japan, who stated that the project for encoding Soyombo had stalled on account of funding issues (see WG2 N2163 L2/00-055). The script was allocated to the Roadmap to the Supplementary Multilingual Plane (SMP) in WG2 Meeting 38 in March 2000 (see WG2 N2203 L2/00-234). There was no further action. The present effort aims to fulfill the original request.

This proposal supersedes the following documents:

- N3949 L2/10-399: Preliminary Proposal to Encode the Soyombo Script in ISO/IEC 10646
- N3986 L2/11-054: Determining the Encoding Model for Soyombo Vowels
- N4026 L2/11-125: Revised Preliminary Proposal to Encode Soyombo in the UCS
- N4142 L2/11-412: Proposal to Encode the Soyombo Script in ISO/IEC 10646
- N4414 L2/13-069: Revised Proposal to Encode the Soyombo Script in ISO/IEC 10646

The major departure from N4414 L2/13-069 is the proposed encoding model. In the previous proposal the representation of consonant conjuncts was based upon a model similar to that used for Tibetan in the UCS. This model relied upon a set of subjoined forms for each consonant letter in the script, which doubled the number of consonant characters required for encoding Soyombo. The subjoined model has been abandoned. Instead, the current proposal recommends the encoding of conjuncts according to the *virama* model used in the UCS for scripts whose structures are based upon the Brahmi model. In the *virama* model a control character is placed between consonants in a cluster in order to indicate that the letters are to be rendered as a conjunct. Characters for representing special cluster-initial forms of four consonants are still required for language-specific orthographies and have been retained. Changes have also been made to the names of characters and the encoded order of the character repertoire. Other changes are the inclusion of additional head marks and terminal marks. All of these topics are discussed throughout the proposal.

The proposed encoding for Soyombo in ISO/IEC 10646 (Unicode) is an attempt to develop a character-encoding standard for the script. It is not an attempt to define a standard for the script to propose new orthographies. The proposed encoding is based upon an analysis of the script as it appears in various primary sources and in scholarly descriptions, and in conjunction with feedback from experts.

The Soyombo font used in this document is based upon the ‘JG Soyombo’ font designed by Jason Glavy, with some glyphs sourced from the font designed by Oliver Corff for his “Soyombo for L^AT_EX” package, with modifications made by the proposal author to the original designs, as well as the addition of new glyphs. Permission for usage of glyphs derived from Glavy’s and Corff’s fonts is being sought from the original designers.

2 Background

Soyombo (ᠰᠣᠶᠣᠮᠪᠣ, Mongolian: Соёмбо бичиг *soyombo bicig*) is a script used for writing Mongolian, Sanskrit, and Tibetan. Soyombo was designed in 1686 by Zanabazar (1635–1723), the first spiritual leader of Tibetan Buddhism in Mongolia, who also developed a Horizontal Square (*xebtee dörböljin*) script, also known as ‘Zanabazar Square’, which has been proposed for encoding in Unicode (see N4541 L2/14-024). The name *soyombo* is the Mongolian transcription of Sanskrit स्वयंभु *svayambhu* ‘self-existing’. It refers to the creation of the script by Zanabazar, who according to tradition saw the letterforms appear in the sky. The script is used mainly for producing Buddhist texts in Inner Asia. The majority of Soyombo records are manuscripts and inscriptions.

3 Script Details

3.1 Structure of the Script

Soyombo is an alphasyllabic script that is written from left to right. Consonant letters possess the inherent vowel /a/, but in some contexts are purely alphabetic. Non-initial vowels are represented as signs. Initial and independent vowels are written using a vowel-carrier letter to which vowel signs are attached. The phonetic value of a consonant letter is altered by the addition of a vowel sign. Vowel length is indicated using a length mark that attaches to a letter or to a sequence of a letter and a vowel sign. Consonant clusters in Sanskrit and Tibetan are represented as conjuncts, which are produced either by attaching cluster-initial forms of letters to the left edge of a base consonant or by stacking non-initial letters beneath the base consonant. Syllable-final Mongolian consonants are indicated using signs.

3.2 Structure of Characters

A Soyombo letter consists of a frame and a nucleus that represents a distinctive phoneme. The frame itself consists of two parts: a filled downwards-pointing triangle and a vertical bar positioned to the right of the triangle. The nucleus is placed beneath the triangle.

$$\lrcorner \text{ frame} + \text{ᠠ} \text{ 'a'-nucleus} \rightarrow \text{ᠠ} \text{ /a/}$$

$$\lrcorner \text{ frame} + \text{ᠠ} \text{ 'ka'-nucleus} \rightarrow \text{ᠠ} \text{ /ka/}$$

$$\lrcorner \text{ frame} + \text{ᠠ} \text{ 'a'-nucleus} + \text{ᠠ} \text{ vowel-sign } o \rightarrow \text{ᠠ} \text{ /o/}$$

$$\lrcorner \text{ frame} + \text{ᠠ} \text{ 'ka'-nucleus} + \text{ᠠ} \text{ vowel-sign } o \rightarrow \text{ᠠ} \text{ /ko/}$$

There are two styles of frames: ‘joined’ and ‘unjoined’. In the ‘joined’ frame the triangle and vertical bar connect. This frame is used with the majority of letters.

In the ‘unjoined’ frame the triangle and vertical bar do not connect and a gap is maintained between the two elements. This frame occurs only with six letters and the gap is preserved in conjuncts (see section 4.6.3).

In the proposed encoding a combination of frame and nucleus is considered an atomic letter, eg. ᠰᠠ A, ᠰᠢ KA. This approach enhances the conceptualization and identification of letters in the script; for instance, the letter ‘ka’ refers inherently to the fully-formed ᠰᠢ and not to the nucleus ᠰ .

Vowels, final consonants, and other phonetic features appear as signs attached to various positions on a letter:

Several of these elements can occur with a single base letter:

3.3 Graphical Structure of Syllables

The structure of a graphical syllable in Soyombo is dependent upon the language being represented. Shown below are the structures for Mongolian, Tibetan, and Sanskrit. The notation uses the following abbreviations: V = vowel, C = consonant, M = mark, P = punctuation. The structure of a Soyombo vowel syllable may be described as:

Mongolian: $\text{V}_{\text{carrier}} [\text{V}_{\text{sign}}] [\text{M}_{\text{length}}] [\text{V}_{\text{diphthong}}] [\text{C}_{\text{final sign}}]$

Tibetan: $\text{V}_{\text{carrier}} [\text{V}_{\text{sign}}] [\text{M}_{\text{length}}]$

Sanskrit: $\text{V}_{\text{carrier}} [\text{V}_{\text{sign}}] [\text{M}_{\text{length}}] [\text{M}_{\text{anusvara}}] [\text{M}_{\text{visarga}}]$

The structure of a consonant syllable may be described as:

Mongolian: $\text{C} [\text{V}_{\text{sign}}] [\text{M}_{\text{length}}] [\text{V}_{\text{diphthong}}] [\text{C}_{\text{final sign}}]$

Tibetan: $[\text{C}_{\text{pre}}] \text{C} [\text{C}^*] [\text{V}_{\text{sign}}] [\text{M}_{\text{length}}] (\text{P}_{\text{tsheg}})$

Sanskrit $[\text{C}_{\text{pre}}] \text{C} [\text{M}_{\text{gem}}] [\text{C}^*] [\text{V}_{\text{sign}}] [\text{M}_{\text{length}}] [\text{M}_{\text{anusvara}}] [\text{M}_{\text{visarga}}]$

3.4 Character Repertoire and Encoding Order

The traditional Mongolian arrangement of the Soyombo script contains 90 characters:

The colorization is not part of the traditional presentation of the script, but has been added in order to illustrate the different classes of characters in the arrangement: head and terminal marks (red, section 4.9); vowels (blue, sections 4.1–4.2); vowel modifiers (cyan, section 4.3); consonant letters (black, section 4.4); final consonant signs (magenta, section 4.5); conjuncts (green, section 4.6).

The proposed encoding for Soyombo contains 81 characters (see the code chart and names list). The proposed repertoire necessarily differs from the presentation of the script in traditional charts. Some forms shown as atomic characters in charts are logically treated in the encoding as composite forms consisting of multiple characters. For instance, vowel letters such as ཨྱ and Mongolian final-consonant syllables such as ཨྲ are decomposed into combinations of a base letter and combining sign, eg. $\text{ཨྱ} + \text{◌} + \text{◌} = \text{ཨྱ}$; $\text{ཨྲ} + \text{◌} = \text{ཨྲ}$; and forms such as ཨླ are analyzed as conjunct stacks, not independent letters, $\text{ཨླ} + \text{ཨླ}$. This analysis aligns with the underlying structure of the script and orthographic principles as preserved in traditional charts.

The encoding order of characters, namely consonant letters, follows a pattern based upon the order of the Tibetan script (see section 4.4.3 for details). The encoded order of Soyombo matches the order proposed for the encoding of the Zanabazar Square script (see N4541 L2/14-024).

3.5 Character Names

An encoding for Soyombo requires assigning distinctive names to Soyombo characters. Mongolian charts of the script assign the same value to multiple letters. For instance, the letter ཨླ is used for Mongolian /g/ and /ɣ/, but for Sanskrit and Tibetan /k/; however, ཨླ is used for /g/ only in Sanskrit and Tibetan contexts. In Mongolian, letters used specifically for Tibetan and Sanskrit are called ‘гали’ *galig*, a term applied to characters used for the transcription of non-Mongolian sounds. Accordingly, in a Mongolian context ཨླ and ཨླ are referred to as *ga* and *galig ga*, respectively. The descriptor ‘galig’ was used as a descriptor in the names for several characters in the original request from Japan and Mongolia (see N1855 L2/98-358). Along with the adoption of the Tibetan arrangement, the naming conventions of the Tibetan script provide an opportunity to assign distinctive names without the need for ‘galig’. The naming convention adopted here also aligns with that used for the proposed encoding for the Zanabazar Square script (see N4541 L2/14-024). These

The vowel signs and the length mark can combine with LETTER A and with consonant letters. Initial and independent forms of vowels are represented by attaching vowel signs to  LETTER A. Long vowels are represented by attaching the  VOWEL LENGTH MARK. The ten vowel syllables shown in traditional charts are represented using the 10 vowel signs and the length mark as follows:

<i>a</i>		<  LETTER A>
<i>ā</i>		<  LETTER A,  VOWEL LENGTH MARK>
<i>i</i>		<  LETTER A,  VOWEL SIGN I>
<i>ī</i>		<  LETTER A,  VOWEL SIGN I,  VOWEL LENGTH MARK>
<i>ü</i>		<  LETTER A,  VOWEL SIGN UE>
<i>ū</i>		<  LETTER A,  VOWEL SIGN UE,  VOWEL LENGTH MARK>
<i>u</i>		<  LETTER A,  VOWEL SIGN U>
<i>ū</i>		<  LETTER A,  VOWEL SIGN U,  VOWEL LENGTH MARK>
<i>e</i>		<  LETTER A,  VOWEL SIGN E>
<i>ē</i>		<  LETTER A,  VOWEL SIGN E,  VOWEL LENGTH MARK>
<i>ö</i>		<  LETTER A,  VOWEL SIGN OE>
<i>ō</i>		<  LETTER A,  VOWEL SIGN OE,  VOWEL LENGTH MARK>
<i>o</i>		<  LETTER A,  VOWEL SIGN O>
<i>ō</i>		<  LETTER A,  VOWEL SIGN O,  VOWEL LENGTH MARK>
<i>ai</i>		<  LETTER A,  VOWEL SIGN AI>
<i>au</i>		<  LETTER A,  VOWEL SIGN AU>
<i>r</i>		<  LETTER A,  VOWEL SIGN VOCALIC R>
<i>r̄</i>		<  LETTER A,  VOWEL SIGN VOCALIC R,  VOWEL LENGTH MARK>
<i>l</i>		<  LETTER A,  VOWEL SIGN VOCALIC L>
<i>l̄</i>		<  LETTER A,  VOWEL SIGN VOCALIC L,  VOWEL LENGTH MARK>

4.2.1 Sanskrit vowels

The ◌ VOWEL SIGN VOCALIC R and ◌ VOWEL SIGN VOCALIC L, and the corresponding long forms, are used for representing Sanskrit vocalic sounds. In Sanskrit contexts, the ◌ VOWEL SIGN UE> is used for representing *u* and in such cases it is transliterated as *u* instead of *ü*.

4.2.2 Mongolian diphthongs

In Mongolian contexts the signs ◌ VOWEL SIGN AI and ◌ VOWEL SIGN AU represent the secondary vowels *i* and *u*, and are used with other vowel signs for representing diphthongs. The encoded representations of diphthongs identified in Soyombo records analyzed for this proposal are as follows:

<i>ii</i>	ᠠᠢ	<ᠠ LETTER A, ◌ VOWEL SIGN I, ◌ VOWEL SIGN AI>
<i>iu</i>	ᠠᠢᠠᠤ	<ᠠ LETTER A, ◌ VOWEL SIGN I, ◌ VOWEL SIGN AU>
<i>ü</i>	ᠠᠢᠠᠨ	<ᠠ LETTER A, ◌ VOWEL SIGN I, ◌ VOWEL LENGTH MARK, ◌ VOWEL SIGN AI>
<i>üu</i>	ᠠᠢᠠᠨᠠᠤ	<ᠠ LETTER A, ◌ VOWEL SIGN I, ◌ VOWEL LENGTH MARK, ◌ VOWEL SIGN AU>
<i>iii</i>	ᠠᠢᠢ	<ᠠ LETTER A, ◌ VOWEL SIGN UE>, ◌ VOWEL SIGN AI>
<i>ui</i>	ᠠᠢᠤ	<ᠠ LETTER A, ◌ VOWEL SIGN U, ◌ VOWEL SIGN AI>
<i>ei</i>	ᠠᠢᠡ	<ᠠ LETTER A, ◌ VOWEL SIGN E, ◌ VOWEL SIGN AI>
<i>oi</i>	ᠠᠢᠣ	<ᠠ LETTER A, ◌ VOWEL SIGN O, ◌ VOWEL SIGN AI>

4.3 Vowel Modifiers

There are two vowel modifiers used for transliterating words of Sanskrit origin:

◌	SOYOMBO SIGN ANUSVARA
◌᠋	SOYOMBO SIGN VISARGA

The sign ANUSVARA is used for indicating nasalization. The sign VISARGA represents post-vocalic aspiration. Independent forms of these modifiers, as shown in traditional script charts, are represented by combining them with ᠠ LETTER A:

<i>aṃ</i>	ᠠ᠎ᠠ᠎	<ᠠ LETTER A, ◌ SIGN ANUSVARA>
<i>aḥ</i>	ᠠ᠎ᠠ᠎ᠠ᠎	<ᠠ LETTER A, ◌᠋ SIGN VISARGA>

They attach to letters in the following positions:

In encoded text they always occur after any accompanying vowel sign; and if ANUSVARA and VISARGA occur together, then the ANUSVARA is placed before the VISARGA in the encoded ensequence:

om ཨྐྱི <ཨ A, ཨ̄ VOWEL SIGN O, ཨ̇ SIGN ANUSVARA>

āh ཨྐྱིྱ <ཨ A, ཨ̄ VOWEL LENGTH MARK, ཨ̄ྱ SIGN VISARGA>

amh ཨྐྱིྱྱ <ཨ A, ཨ̇ SIGN ANUSVARA, ཨ̄ྱ SIGN VISARGA>

4.4 Consonant Letters

There are 40 consonant letters:

ཀ	SOYOMBO LETTER KA	པ	SOYOMBO LETTER PA
ཁ	SOYOMBO LETTER KHA	ཕ	SOYOMBO LETTER PHA
ག	SOYOMBO LETTER GA	བ	SOYOMBO LETTER BA
ཇ	SOYOMBO LETTER GHA	བྱ	SOYOMBO LETTER BHA
ང	SOYOMBO LETTER NGA	མ	SOYOMBO LETTER MA
ཅ	SOYOMBO LETTER CA	ཅ	SOYOMBO LETTER TSA
ཆ	SOYOMBO LETTER CHA	ཆ	SOYOMBO LETTER TSHA
ཇ	SOYOMBO LETTER JA	ཇ	SOYOMBO LETTER DZA
ཉ	SOYOMBO LETTER JHA	ཉ	SOYOMBO LETTER ZHA
ཏ	SOYOMBO LETTER NYA	ཏ	SOYOMBO LETTER ZA
ཐ	SOYOMBO LETTER TTA	ཐ	SOYOMBO LETTER -A
འ	SOYOMBO LETTER TTHA	འ	SOYOMBO LETTER YA
ད	SOYOMBO LETTER DDA	ད	SOYOMBO LETTER RA
ཡ	SOYOMBO LETTER DDHA	ཡ	SOYOMBO LETTER VA
མ	SOYOMBO LETTER NNA	མ	SOYOMBO LETTER LA
པ	SOYOMBO LETTER TA	པ	SOYOMBO LETTER SHA
ཕ	SOYOMBO LETTER THA	ཕ	SOYOMBO LETTER SSA
ཇ	SOYOMBO LETTER DA	ཇ	SOYOMBO LETTER SA
ཉ	SOYOMBO LETTER DHA	ཉ	SOYOMBO LETTER HA
ཏ	SOYOMBO LETTER NA	ཏ	SOYOMBO LETTER KSSA

4.4.1 Notes on consonants

ཕྱ **KSSA** The letter ཕྱ **KSSA** represents the Sanskrit cluster *kṣa* (/kṣa/). In Soyombo, this letter represents a phoneme that is phonetically a consonant cluster, but, it has the structure of an atomic letter. It is encoded as a consonant letter because in all cases consonant conjunct forms are written as stacks in Soyombo, not as ligatures. While in some scripts the written form for Sanskrit /kṣa/ has an encoded representation as a character sequence, such an approach would not be consistent with this script.

ཀ-A The letter ཀ -A corresponds to འ U+0F60 TIBETAN LETTER -A.

Frame The ‘unjoined’ frame ཏ is used with ཏ_{KA}, ཏ_{KHA}, ཏ_{GA}, ཏ_{GHA}, ཏ_{NGA}, ཏ_{HA}, ཏ_{KSSA}.

4.4.2 Phonetic values of consonant letters

The phonetic values for consonant letters in Mongolian (‘M’), Sanskrit (‘S’), and Tibetan (‘T’) contexts are given below. The primary difference between the three occurs in Mongolian contexts where letters for Sanskrit voiceless sounds (ie. ཏ_{KA}, ཏ_{CA}, ཏ_{TA}, ཏ_{PA}) are used for voiced stops, while the letters for voiceless aspirated sounds (ie. ཏ_{KHA}, ཏ_{CHA}, ཏ_{THA}, ཏ_{PHA}) are used for voiceless stops.

		M	S	T		M	S	T	
ཏ	KA	<i>g, γ</i>	<i>ka</i>	<i>ka</i>	ཏ	PA	<i>b</i>	<i>pa</i>	<i>pa</i>
ཏ	KHA	<i>k, q, x</i>	<i>kha</i>	<i>kha</i>	ཏ	PHA	<i>p</i>	<i>pha</i>	<i>pha</i>
ཏ	GA		<i>ga</i>	<i>ga</i>	ཏ	BA		<i>ba</i>	<i>ba</i>
ཏ	GHA		<i>gha</i>	<i>gha</i>	ཏ	BHA		<i>bha</i>	<i>bha</i>
ཏ	NGA	<i>ng</i>	<i>ṅa</i>	<i>ṅa</i>	ཏ	MA	<i>m</i>	<i>ma</i>	<i>ma</i>
ཏ	CA	<i>j</i>	<i>ca</i>	<i>ca</i>	ཏ	TSA			<i>tsa</i>
ཏ	CHA	<i>c</i>	<i>cha</i>	<i>cha</i>	ཏ	TSHA			<i>tsha</i>
ཏ	JA		<i>ja</i>	<i>ja</i>	ཏ	DZA			<i>dza</i>
ཏ	JHA		<i>jha</i>	<i>dzha</i>	ཏ	ZHA			<i>zha</i>
ཏ	NYA		<i>ṅa</i>	<i>ṅa</i>	ཏ	ZA			<i>za</i>
ཏ	TTA		<i>ṭa</i>	<i>ṭa</i>	ཏ	-A			<i>’a</i>
ཏ	TTHA		<i>ṭha</i>	<i>ṭha</i>	ཏ	YA	<i>y</i>	<i>ya</i>	<i>ya</i>
ཏ	DDA		<i>ḍa</i>	<i>ḍa</i>	ཏ	RA	<i>r</i>	<i>ra</i>	<i>ra</i>
ཏ	DDHA		<i>ḍha</i>	<i>ḍha</i>	ཏ	LA	<i>l</i>	<i>la</i>	<i>la</i>
ཏ	NNA		<i>ṇa</i>	<i>ṇa</i>	ཏ	VA		<i>va</i>	<i>wa</i>
ཏ	TA	<i>d</i>	<i>ta</i>	<i>ta</i>	ཏ	SHA	<i>sh, ś</i>	<i>śa</i>	<i>śa</i>
ཏ	THA	<i>t</i>	<i>tha</i>	<i>tha</i>	ཏ	SSA		<i>ṣa</i>	<i>ṣa</i>
ཏ	DA		<i>da</i>	<i>da</i>	ཏ	SA	<i>s</i>	<i>sa</i>	<i>sa</i>
ཏ	DHA		<i>dha</i>	<i>dha</i>	ཏ	HA	<i>h</i>	<i>ha</i>	<i>ha</i>
ཏ	NA	<i>n</i>	<i>na</i>	<i>na</i>	ཏ	KSSA		<i>kṣa</i>	<i>kṣa</i>

4.4.3 Encoded order of consonants

The primary difference between the traditional arrangement and the proposed repertoire is the ordering of consonant letters. There are three sets of consonants in the traditional arrangement, shown below separated by ‘...’:

ᠮ	ᠬ	ᠨ	ᠵ	ᠴ	ᠨᠠ	ᠳ	ᠲ	ᠨᠠ	ᠪ	ᠫ	ᠮᠠ	ᠶ	ᠷ	ᠪᠠ
<i>ga</i>	<i>ka</i>	<i>na</i>	<i>ja</i>	<i>ca</i>	<i>ña</i>	<i>da</i>	<i>ta</i>	<i>na</i>	<i>ba</i>	<i>pa</i>	<i>ma</i>	<i>ya</i>	<i>ra</i>	<i>va</i>
ᠯ	ᠰ	ᠰᠠ	ᠬᠠ	ᠬᠰᠠ	...	ᠮ	ᠮᠠ	ᠵ	ᠵᠠ	ᠲᠠ	ᠲᠠ	ᠳᠠ	ᠳᠠ	ᠨᠠ
<i>la</i>	<i>śa</i>	<i>sa</i>	<i>ha</i>	<i>kṣa</i>		<i>ga</i>	<i>gha</i>	<i>ja</i>	<i>jha</i>	<i>ṭa</i>	<i>ṭha</i>	<i>ḍa</i>	<i>ḍha</i>	<i>ṇa</i>
ᠳ	ᠳᠠ	ᠪ	ᠪᠠ	ᠰᠠ	...	ᠲᠠ	ᠲᠠ	ᠳᠠ	ᠵᠠ	ᠵᠠ	ᠷ			
<i>da</i>	<i>dha</i>	<i>ba</i>	<i>bha</i>	<i>ṣa</i>		<i>tsa</i>	<i>tsha</i>	<i>dza</i>	<i>zha</i>	<i>za</i>	<i>'a</i>			

The first set (*ga .. kṣa*) contains the 20 main consonant letters required for writing Mongolian texts including loanwords and sounds foreign to Mongolian. These 20 letters in addition to the 14 consonants of the second set (*ga .. ṣa*) are required for representing Sanskrit; and these 34 letters along with the 6 letters of the third set (*tsa .. 'a*) provide all the 40 letters needed for Tibetan. While this arrangement reflects an analysis of the script from a Mongolian perspective, it obscures the underlying phonological pattern upon which the script is based, as is evidenced by the similarity of forms of letters that represent consonants that belong to particular classes of articulation:

velar	ᠮ ᠬ ᠨ ᠵ ᠴ (ᠮ) (ᠨ)	liquid	ᠪ ᠫ ᠵ ᠷ
palatal	ᠯ ᠰ ᠵ ᠶ ᠳ (ᠳ) (ᠳ) (ᠳ)	fricative	ᠰ ᠶ
retroflex	ᠲ ᠲ ᠲ ᠲ ᠲ	sibilant	ᠰ ᠶ ᠶ
dental	ᠳ ᠲ ᠲ ᠲ ᠲ	glottal	ᠷ
labial	ᠪ ᠫ ᠪ ᠫ ᠪ		

The proposed ordering of consonant letters in accordance with the Tibetan pattern is shown below. It offers a more natural arrangement as it orders related letters contiguously, which in turn highlights the underlying congruence between letter-forms and the phonological system of Tibetan (and Sanskrit):

ᠮ	ᠬ	ᠨ	ᠵ	ᠴ	ᠨᠠ	ᠳ	ᠲ	ᠨᠠ	ᠪ	ᠫ	ᠮᠠ	ᠶ	ᠷ	ᠪᠠ
<i>ka</i>	<i>kha</i>	<i>ga</i>	<i>gha</i>	<i>na</i>	<i>ca</i>	<i>cha</i>	<i>ja</i>	<i>jha</i>	<i>ña</i>	<i>ṭa</i>	<i>ṭha</i>	<i>ḍa</i>	<i>ḍha</i>	<i>ṇa</i>
ᠳ	ᠲ	ᠳ	ᠳ	ᠲ	ᠫ	ᠪ	ᠫ	ᠪ	ᠫ	ᠮ	ᠲᠠ	ᠲᠠ	ᠳᠠ	ᠳᠠ
<i>ta</i>	<i>tha</i>	<i>da</i>	<i>dha</i>	<i>na</i>	<i>pa</i>	<i>pha</i>	<i>ba</i>	<i>bha</i>	<i>ma</i>	<i>tsa</i>	<i>tsha</i>	<i>dza</i>	<i>zha</i>	<i>za</i>
ᠷ	ᠶ	ᠷ	ᠶ	ᠶ	ᠰ	ᠶ	ᠶ	ᠶ	ᠰ	ᠶ				
<i>'a</i>	<i>ya</i>	<i>ra</i>	<i>la</i>	<i>va</i>	<i>śa</i>	<i>ṣa</i>	<i>sa</i>	<i>ha</i>	<i>kṣa</i>					

4.4.4 Consonant half-forms

In most cases the half-form of a letter is the nucleus. For some letters, the ‘swoosh’ must be removed in order to produce the half-form, while for other letters the ‘swoosh’ must be retained. The half-forms of each letter is shown below:

KA	᠎ᠠ	ᠣ	TTA	ᠲᠠ	ᠠ	PA	ᠫᠠ	ᠣ	-A	ᠠ	ᠣ
KHA	᠎ᠠ	ᠠ	TTHA	ᠲᠠ	ᠠ	PHA	ᠫᠠ	ᠠ	YA	ᠶᠠ	ᠠ, ᠠ
GA	᠎ᠠ	ᠠ	DDA	ᠲᠠ	ᠠ	BA	ᠪᠠ	ᠣ	RA	ᠷᠠ	ᠠ, ᠠ
GHA	᠎ᠠ	ᠠ	DDHA	ᠲᠠ	ᠠ	BHA	ᠪᠠ	ᠠ	LA	ᠯᠠ	ᠠ
NGA	᠎ᠠ	ᠠ	NNA	ᠲᠠ	ᠠ	MA	ᠮᠠ	ᠠ, ᠠ	VA	ᠪᠠ	ᠠ
CA	᠎ᠠ	ᠠ	TA	ᠲᠠ	ᠠ	TSA	ᠲᠠ	ᠠ	SHA	ᠰᠠ	ᠠ
CHA	᠎ᠠ	ᠠ	THA	ᠲᠠ	ᠠ	TSHA	ᠲᠠ	ᠠ	SSA	ᠰᠠ	ᠠ
JA	᠎ᠠ	ᠠ	DA	ᠲᠠ	ᠠ	DZA	ᠲᠠ	ᠠ	SA	ᠰᠠ	ᠠ
JHA	᠎ᠠ	ᠠ	DHA	ᠲᠠ	ᠠ	ZHA	ᠲᠠ	ᠠ	HA	ᠬᠠ	ᠠ
NYA	᠎ᠠ	ᠠ	NA	ᠲᠠ	ᠠ	ZA	ᠲᠠ	ᠠ	KSSA	ᠰᠠ	ᠠ

4.4.5 Glyphic variants of consonant letters

The glyphic representations of consonant letters are quite uniform across the available sources. There are stylistic differences in the shape of the triangle and the ‘swoosh’ (see section 4.14.1), but the forms of the consonant nuclei are regular. Nevertheless, glyphic variants have been observed for the following letters:

	regular	variant
KSSA	ᠰᠠ	ᠰᠠ
ZA	ᠲᠠ	ᠲᠠ
LA	ᠯᠠ	ᠯᠠ

The letters ᠯᠠ_{LA} and ᠲᠠ_{ZA} have similar appearances. In some sources ZA is written as ᠲᠠ in order to distinguish it from ᠯᠠ_{LA}.

4.5 Final Consonant Signs

Mongolian syllable-final consonants are written using the following 12 combining signs:

◌̣	SOYOMBO FINAL CONSONANT SIGN G	◌̤	SOYOMBO FINAL CONSONANT SIGN M
◌̥	SOYOMBO FINAL CONSONANT SIGN K	◌̦	SOYOMBO FINAL CONSONANT SIGN R
◌̧	SOYOMBO FINAL CONSONANT SIGN NG	◌̨	SOYOMBO FINAL CONSONANT SIGN L
◌̩	SOYOMBO FINAL CONSONANT SIGN D	◌̪	SOYOMBO FINAL CONSONANT SIGN SH
◌̫	SOYOMBO FINAL CONSONANT SIGN N	◌̬	SOYOMBO FINAL CONSONANT SIGN S
◌̭	SOYOMBO FINAL CONSONANT SIGN B	◌̮	SOYOMBO FINAL CONSONANT SIGN -A

The names for these signs are based upon the phonetic values of the Mongolian codas. The signs attach to the frame below the nucleus of a letter. The exception is FINAL CONSONANT SIGN -A, which attaches to the right of the frame, raised slightly above the baseline in order to distinguish it from VOWEL LENGTH MARK.

The signs are condensed forms of the nucleus of consonant letters or derived from a fragment of the nucleus, as shown below. The exception is ◌̮ FINAL CONSONANT SIGN -A, which is not derived from ◌̫ LETTER -A as would be expected; rather it is based upon ◌̣ VOWEL LENGTH MARK.

The final-consonants shown in traditional charts of Soyombo are represented as follows:

<i>ag, ay</i>	◌̣	<◌̣ LETTER A, ◌̣ FINAL CONSONANT SIGN G>
<i>ak, aq</i>	◌̥	<◌̥ LETTER A, ◌̥ FINAL CONSONANT SIGN K>
<i>ang</i>	◌̧	<◌̧ LETTER A, ◌̧ FINAL CONSONANT SIGN NG>
<i>ad, at</i>	◌̩	<◌̩ LETTER A, ◌̩ FINAL CONSONANT SIGN D>
<i>an</i>	◌̫	<◌̫ LETTER A, ◌̫ FINAL CONSONANT SIGN N>
<i>ab, ap</i>	◌̭	<◌̭ LETTER A, ◌̭ FINAL CONSONANT SIGN B>
<i>am</i>	◌̤	<◌̤ LETTER A, ◌̤ FINAL CONSONANT SIGN M>
<i>ar</i>	◌̦	<◌̦ LETTER A, ◌̦ FINAL CONSONANT SIGN R>
<i>al</i>	◌̨	<◌̨ LETTER A, ◌̨ FINAL CONSONANT SIGN L>
<i>ash</i>	◌̪	<◌̪ LETTER A, ◌̪ FINAL CONSONANT SIGN SH>
<i>as</i>	◌̬	<◌̬ LETTER A, ◌̬ FINAL CONSONANT SIGN S>
<i>'a</i>	◌̮	<◌̮ LETTER A, ◌̮ FINAL CONSONANT SIGN -A>

The final-consonant sign always occurs after a vowel sign or the VOWEL LENGTH MARK in encoded text:

riul ࠊ࠵࠵࠵࠵ < ࠊ࠵ RA, ࠊ࠵ VOWEL SIGN I, ࠊ࠵ VOWEL SIGN AU, ࠊ࠵ FINAL CONSONANT SIGN L >

gīg ࠊ࠵࠵࠵࠵ < ࠊ࠵ KA, ࠊ࠵ VOWEL SIGN I, ࠊ࠵ VOWEL LENGTH MARK, ࠊ࠵ FINAL CONSONANT SIGN G >

4.6 Consonant Conjuncts

In general, a consonant cluster is written as a conjunct. Geminated consonants are an exception (see section 4.7). A conjunct is rendered as a vertical stack that consists of the regular form of the initial letter and the nucleus of each non-initial letter descending sequentially beneath the initial letter: ࠊ࠵ *nka*, ࠊ࠵ *ddha*, ࠊ࠵ *sva*, etc. Four consonant letters have alternate representations in conjuncts: ࠊ࠵_{LA}, ࠊ࠵_{SHA}, ࠊ࠵_{SA}, ࠊ࠵_{RA}. Depending upon the linguistic context, clusters involving these letters may be rendered using either stacked or prefixed letters, eg. *sva* may occur as both ࠊ࠵ and ࠊ࠵. Soyombo sources show conjuncts that contain three consonants, but theoretically a conjunct could contain any number of consonants.

The proposed representation of Soyombo conjuncts in encoded text is based upon the *virama* model used for Brahmi-based scripts in the UCS. However, as Soyombo does not have a native *virama* character, the following special character is proposed for controlling conjunct formation:

◻ SOYOMBO SUBJOINER

Additionally, four cluster-initial letters are proposed for representing pre-fixed letters (see figure 7 for examples of usage):

◻ SOYOMBO CLUSTER-INITIAL LETTER RA
 ◻ SOYOMBO CLUSTER-INITIAL LETTER LA
 ◻ SOYOMBO CLUSTER-INITIAL LETTER SHA
 ◻ SOYOMBO CLUSTER-INITIAL LETTER SA

The SUBJOINER and four cluster-initial letters support all of the conjunct formation requirements for Soyombo. The dotted box is not part of the glyphic representations of these characters, but is used in the code chart and descriptions in order to convey that these letters have special behaviors.

4.6.1 Cluster-Initial Letters

The cluster-initial forms are small geometric shapes that attach to the left side of the triangle of the following letter in the cluster, in the following positions on the frame:

ࠊ࠵ ࠊ࠵ ࠊ࠵ ࠊ࠵

There is no glyphic correspondence between the cluster-initial and regular forms of these four letters.

4.6.2 Encoded Representation of Conjuncts

A conjunct is represented in encoded text by placing the ◻ SUBJOINER between each consonant in a cluster:

ꠘꠢ꠨ <ꠘ_{SA}, ꠢ꠨_{VA}>

ꠘꠢ꠨ꠘꠢ꠨ <ꠘ_{SA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{VA}>

ꠘꠢ꠨ꠢ꠨ <ꠘ_{SA}, ꠢ꠨_{VA}, ꠢ꠨_{YA}>

ꠘꠢ꠨ꠘꠢ꠨ꠢ꠨ <ꠘ_{SA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{VA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{YA}>

The SUBJOINER indicates that the following consonant is to be represented in its nuclear form and placed below the nucleus of the base letter. Conceptually, the function of the SUBJOINER is to remove the frame of a letter in order to produce the nucleus and to place the nucleus below the preceding letter:

<ꠘ_{JA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{NYA}> → ꠘ + (ꠢ꠨ - ꠢ꠨ → ꠘ) → ꠘꠢ꠨ *ñca*

<ꠢ꠨_{TTA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{TTHA}> → ꠢ꠨ + (ꠢ꠨ - ꠢ꠨ → ꠢ꠨) → ꠢ꠨ꠢ꠨ *ttha*

<ꠢ꠨_{NA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{DA}> → ꠢ꠨ + (ꠢ꠨ - ꠢ꠨ → ꠢ꠨) → ꠢ꠨ꠢ꠨ *nda*

<ꠢ꠨_{MA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{BHA}> → ꠢ꠨ + (ꠢ꠨ - ꠢ꠨ → ꠢ꠨) → ꠢ꠨ꠢ꠨ *mbha*

Placing the SUBJOINER after ꠢ꠨_{LA}, ꠢ꠨_{SHA}, ꠘꠢ꠨_{SA}, ꠢ꠨_{RA} will produce a normal stacked conjunct. The cluster-initial letters must be used in order to produce the alternate conjuncts:

rva ꠢ꠨ꠢ꠨ <ꠢ꠨_{RA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{VA}>

rva ꠢ꠨ <ꠢ꠨ CLUSTER-INITIAL RA, ꠢ꠨_{VA}>

lva ꠢ꠨ꠢ꠨ <ꠢ꠨_{LA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{VA}>

lva ꠢ꠨ <ꠢ꠨ CLUSTER-INITIAL LA, ꠢ꠨_{VA}>

śva ꠢ꠨ꠢ꠨ <ꠢ꠨_{SHA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{VA}>

śva ꠢ꠨ <ꠢ꠨ CLUSTER-INITIAL SHA, ꠢ꠨_{VA}>

sva ꠘꠢ꠨ꠢ꠨ <ꠘꠢ꠨_{SA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{VA}>

sva ꠢ꠨ <ꠢ꠨ CLUSTER-INITIAL SA, ꠢ꠨_{VA}>

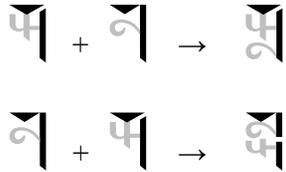

These four cluster-initial letters are the logical initial consonant in a conjunct, but the consonant to which they attach is to be considered the base letter. All signs and marks attach to the following letter:

rvi ꠢ꠨ꠢ꠨ꠘꠢ꠨ <ꠢ꠨_{RA}, ꠘꠢ꠨ SUBJOINER, ꠢ꠨_{VA}, ꠘꠢ꠨ VOWEL SIGN ꠘꠢ꠨>

rvi ꠢ꠨ <ꠢ꠨ CLUSTER-INITIAL RA, ꠢ꠨_{VA}, ꠘꠢ꠨ VOWEL SIGN ꠘꠢ꠨>

4.6.3 Special conjunct behavior

The six letters ཀ KA, ཁ KHA, ག GA, ཁྲ GHA, ཁླ NGA, ཏ HA, ས KSSA use the ‘unjoined’ frame ཀ. The gap between the triangle and frame is preserved when these these letters are initial in a conjunct. When these letters are non-initial in a conjunct, the gap in their frame is preserved by means of a split in the frame at the position where the nucleus is placed.

Examples of conjuncts with these six letters in non-initial position are:

<i>tka</i>	ཀྲ	<ཏ TA, ཀྲ SUBJOINER, ཀ KA>
<i>skha</i>	ཀྲ	<ས SA, ཀྲ SUBJOINER, ཁ KHA>
<i>dga</i>	ཀྲ	<ད DA, ཀྲ SUBJOINER, ག GA>
<i>bgħa</i>	ཀྲ	<བ BA, ཀྲ SUBJOINER, ཁྲ GHA>
<i>dña</i>	ཀྲ	<ད DDA, ཀྲ SUBJOINER, ཁླ NGA>
<i>lha</i>	ཀྲ	<ལ LA, ཀྲ SUBJOINER, ཏ HA>
<i>ṣkṣa</i>	ཀྲ	<ས SSA, ཀྲ SUBJOINER, ས KSSA>

4.6.4 Consonant conjuncts in script charts

Traditional Soyombo charts show 14 letters as independent characters. These letters are consonant conjuncts. They are not the only conjuncts used in Soyombo, as others are attested in manuscripts. These conjuncts are to be represented in encoded text as:

<i>kya</i>	ཀྲ	<ཀ KA, ཀྲ SUBJOINER, ར YA>
<i>kra</i>	ཀྲ	<ཀ KA, ཀྲ SUBJOINER, ར RA>
<i>kla</i>	ཀྲ	<ཀ KA, ཀྲ SUBJOINER, ར LA>
<i>kva</i>	ཀྲ	<ཀ KA, ཀྲ SUBJOINER, ར VA>
<i>kka</i>	ཀྲ	<ཀ KA, ཀྲ GEMINATION MARK>
<i>nka</i>	ཀྲ	<ཀ NGA, ཀྲ SUBJOINER, ཀ KA>
<i>ñca</i>	ཀྲ	<ཀ NYA, ཀྲ SUBJOINER, ར CA>

<i>ṅṭa</i>	ṅṭ	<ṅ _{NNA} , [SUBJOINER], ṅ _{TTA} >
<i>ṇṭa</i>	ṇṭ	<ṇ _{NA} , [SUBJOINER], ṇ _{TA} >
<i>ṃṃpa</i>	ṃṃ	<ṃ _{MA} , [SUBJOINER], ṃ _{PA} >
<i>lka</i>	ḷ	<[CLUSTER-INITIAL LA], ḷ _{KA} >
<i>śka</i>	ḷ	<[CLUSTER-INITIAL SHA], ḷ _{KA} >
<i>ska</i>	ḷ	<[CLUSTER-INITIAL SA], ḷ _{KA} >
<i>rka</i>	ḷ	<[CLUSTER-INITIAL RA], ḷ _{KA} >

They are likely included in the traditional arrangement in order to illustrate the manner of representing consonant clusters. These conjuncts are of four types: Non-initial semi-vowels (*kya*, *kra*, *kla*, *kva*); gemination (*kka*); consonants and nasals from the five classes of articulation in Sanskrit phonology (*ṅka*, *ṅca*, *ṅṭa*, *ṇṭa*, *ṃṃpa*); and cluster-initial letters used in Tibetan (*rka*, *lka*, *ska*) and Sanskrit (*śka*).

4.7 Gemination Mark

The following character is used for indicating geminated consonants:

◌̄ SOYOMBO GEMINATION MARK

It is stacked above the triangle of the frame:

ḹ

It is theoretically possible to represent geminated consonants as conjuncts, as shown below, but such behavior is not attested in the available sources:

kka ḷḷ <ḷ_{KA}, [SUBJOINER], ḷ_{KA}>

The GEMINATION MARK is placed immediately after the base letter before any combining sign. Other above-base signs are placed above the mark.

kka ḹ <ḷ_{KA}, ◌̄ GEMINATION MARK>

kkā ḹ <ḷ_{KA}, ◌̄ GEMINATION MARK, ◌̄ VOWEL LENGTH MARK>

kki ḹ <ḷ_{KA}, ◌̄ GEMINATION MARK, ◌̄ VOWEL SIGN ▷>

4.8 Punctuation

Three punctuation marks are proposed for encoding:

- ◌̣ SOYOMBO TSHEG
- | SOYOMBO SHAD
- || SOYOMBO DOUBLE SHAD

The ◌̣ TSHEG is used for marking the end of a syllable; it corresponds to ◌̣ U+0F0B TIBETAN MARK INTERSYLLABIC TSHEG.

The | SHAD indicates the end of a phrase or sentence; it corresponds to | U+0F0D TIBETAN MARK SHAD and | U+0964 DEVANAGARI DANDA.

The || DOUBLE SHAD indicates the end of a section; it corresponds to || U+0F0E TIBETAN MARK NYIS SHAD and || U+0965 DEVANAGARI DOUBLE DANDA.

4.9 Head Marks

Three head marks are proposed for encoding:

-  SOYOMBO HEAD MARK WITH TRIPLE FLAME
-  SOYOMBO HEAD MARK WITH SINGLE FLAME
-  SOYOMBO HEAD MARK WITH CANDRABINDU

The following glyphic variants have been identified in the available sources (see table 12):

	regular	variants
HEAD MARK WITH TRIPLE FLAME		
HEAD MARK WITH SINGLE FLAME		     
HEAD MARK WITH CANDRABINDU		 

There is no known semantic distinction between the  ‘black’ and  ‘white’ forms of the head-mark base. The differences between the normative and variant forms are stylistic. The primary point of variation is the style of the  center element, which has a  ‘solid’ variant. There is a  ‘white’ variant that also has a  ‘solid’ form. The ‘solid’ forms lack the ‘hollow’ points found in the halves of the normative center elements. The other point of variation is the  ‘black’ and  ‘white’ forms of the *candrabindu*. These variant forms

are not proposed for encoding as separate characters. They are to be unified with the representative forms and display of glyphic variants is to be managed through fonts.

The ‘head marks’ correspond semantically to other characters in the UCS, such as  U+1800 MONGOLIAN BIRGA and  U+0FD3 TIBETAN MARK INITIAL BRDA RNYING YIG MGO MDUN MA. In several texts a ‘head mark’ may be followed by a  SHAD or  DOUBLE SHAD.

The  HEAD MARK WITH TRIPLE FLAME is also known as the ‘Svayambhu’ or ‘Soyombo’ symbol. In addition to its usage in written texts, it is an official symbol in Mongolia and appears on the flag and coat of arms of the country (see figures 44 and 45). It is also used in other language environments; see figure 42 for usage of the HEAD MARK WITH TRIPLE FLAME in a seal bearing the Mongolian script.

4.10 Terminal Marks

Various ‘terminal marks’ are used at the end of a text. Three such marks are proposed for encoding:

 SOYOMBO TERMINAL MARK-1

 SOYOMBO TERMINAL MARK-2

 SOYOMBO TERMINAL MARK-3

Forms of these marks as they appear in manuscript sources are shown in table 13.

4.11 Digits

The available sources do not indicate the use of digits or number forms in the script.

4.12 Vertical Text

All the available sources show Soyombo text represented horizontally, left-to-right, top-to-bottom. The seal (*tamga*) in figure 13 may appear to contain vertical text, but it is actually horizontal text with line breaks after every third graphical syllable. It was likely designed as such in order to provide visual similarity to the Mongolian and Phags-pa scripts that also appear on the seal. There is only one instance of Soyombo represented vertically, shown here in figure 14. The text, which contains some errors, has some words written as vertical ligatures, which are to be considered idiosyncratic. These ‘word ligatures’ appear to be used for facilitating the spacing and fit of vertical text within the physical boundaries of the seal. Therefore, is no real requirement to support vertical orientation for Soyombo in plain text.

As a general rule, if Soyombo is represented in a vertical environment the minimal unit of vertical segmentation should be the graphical syllable. The text should be oriented top-to-bottom, left-to-right, with upright glyphs. See the comments in figure 14 for an example. The “Unicode Technical Report #50: Unicode Vertical Text Layout” describes the character property `Vertical_Orientation` (`vo`) for specifying default character orientation. For Soyombo, the property would be defined as: `Vertical_Orientation=U` or `vo=U`, where the value ‘U’ indicates that the glyphs remain upright in both horizontal and vertical text layout.

4.13 Collation

The default sort order for Soyombo is as follows:

࠵ A < ࠶ VOWEL SIGN I < ࠷ VOWEL SIGN UE < ࠸ VOWEL SIGN U <
 ࠹ VOWEL SIGN VOCALIC R < ࠺ VOWEL SIGN VOCALIC L < ࠻ VOWEL SIGN E <
 ࠼ VOWEL SIGN OE < ࠽ VOWEL SIGN O < ࠾ VOWEL SIGN AI < ࠿ VOWEL SIGN AU <
 ࡀ VOWEL LENGTH MARK < ࡁ KA << ࡂ FINAL CONSONANT SIGN G < ࡃ KSSA <
 ࡄ KHA << ࡅ FINAL CONSONANT SIGN K < ࡆ GA < ࡇ GHA < ࡈ NGA <<
 ࡉ FINAL CONSONANT SIGN NG < ࡊ CA < ࡋ CHA < ࡌ JA < ࡍ NYA < ࡎ TTA <
 ࡏ TTHA < ࡐ DDA < ࡑ DDHA < ࡒ NNA < ࡓ TA << ࡔ FINAL CONSONANT SIGN D <
 ࡕ THA < ࡖ DA < ࡗ DHA < ࡘ NA << ࡙ FINAL CONSONANT SIGN N < ࡚ PA <<
 ࡛ FINAL CONSONANT SIGN B < ࡜ PHA < ࡝ BA < ࡞ BHA < ࡟ MA <<
 ࡠ FINAL CONSONANT SIGN M < ࡡ TSA < ࡢ TSHA < ࡣ DZA < ࡤ ZHA < ࡥ ZA <
 ࡦ SMALL A << ࡧ FINAL CONSONANT SIGN -A < ࡨ YA < ࡩ CLUSTER INITIAL RA <<
 ࡪ RA << ࡫ FINAL CONSONANT SIGN R < ࡬ CLUSTER INITIAL LA << ࡭ LA <<
 ࡰ FINAL CONSONANT SIGN L < ࡱ VA < ࡲ CLUSTER INITIAL SHA << ࡳ SHA <<
 ࡴ FINAL CONSONANT SIGN SH < ࡵ SSA < ࡶ CLUSTER INITIAL SA << ࡷ SA < ࡸ HA <
 ࡹ GEMINATION MARK

The following characters have secondary weights:

࠵ HEAD MARK WITH TRIPLE FLAME, ࠶ HEAD MARK WITH SINGLE FLAME, ࠷ HEAD MARK WITH
 CANDRABINDU, ࠸ TERMINAL MARK-1, ࠹ TERMINAL MARK-2, ࠺ TERMINAL MARK-3,
 ࡀ ANUSVARA, ࡁ VISARGA

4.14 Rendering Considerations

4.14.1 Stylistic variations of the frame

Variations exist in the shape of the triangle, depth of the vertical bar, and the shape of the ‘swoosh’:

These are all stylistic variations whose appearances are to be controlled through fonts.

4.14.2 Depth of the vertical bar

The height of the vertical bar varies across Soyombo records. The primary consideration for height is that below marks should sit at a position below the nucleus or attached to the vertical bar such that there is sufficient space between the mark and the nucleus above. A short vertical bar is fine for pure Mongolian,

which requires only sufficient clearance beneath the nucleus of a letter and the terminal of the frame for below-base vowel signs and final consonant signs.

The depth of the vertical bar should be lower in Sanskrit and Tibetan contexts, where conjuncts are common. Generally, a conjunct consisting of two consonants should be rendered such that the second nucleus fits within the normal letter height.

In Soyombo sources that show conjuncts with three consonants, the nucleus of the third consonant is simply placed beneath the second without extending the vertical bar:

However, depth of the word *grva* breaks the symmetry. A solution is to extend the depth of the vertical bar in order to bring the last nucleus of *grva* within the frame.

This approach, however, disrupts the proportions of the rest of the letters and words. One solution would be to increase the depth of the vertical bar for the entire line.

The above solution maintains the graphical structure of the script, but does not provide the most elegant appearance as the depth of the vertical bar distorts the proportion of the size of the nucleus to the size of the bar. The next section discusses methods of rendering conjuncts in order to reduce alterations to the proportions of Soyombo letter-forms.

4.14.3 Adjustments for Conjuncts

There are no formal rules for sizing character glyphs within a stack. However, based upon an examination of conjunct styles in manuscripts, it is evident that some scribes adjusted the size of letters in stacks in an attempt to ensure proportions with surrounding characters. However, the available sources also reveal that some scribes were content with representing conjuncts simply by placing consonant nuclei below the baseline without consideration for the depth of the vertical bar.

‘A’	‘B’	‘C’
regular letter size normal bar depth	regular letter size greater bar depth	condensed letters normal bar depth
		
		
		
		
		

Column ‘A’ shows conjuncts rendered without any adjustments. The nuclei in the conjuncts are of the normal letter size and the depth of the vertical bar is of the normal letter height. It will be noticed that the final nucleus of the conjuncts in column ‘A’ protrudes slightly beneath the baseline and the bottom edge of the vertical bar. In column ‘B’ the nuclei are also the normal size, but the depth of the vertical bar has been increased such that it sit lower than the lowest nucleus. Column ‘C’ shows nuclei that have been condensed such that they fit completely within the normal letter height.

4.14.4 Frame Adjustments for Conjuncts

The gap in the ‘unjoined’ frame is preserved at any depth at which a letter possessing this frame occurs in a conjunct:

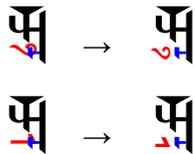

4.14.5 Glyph requirements for rendering conjuncts

A Soyombo font must contain a full set of nuclear forms for each consonant letter. The font will produce a consonant stack by substituting each <◻ SUBJOINER, *consonant*> pair with the nuclear or half form of the consonant letter. If the nucleus of a consonant is not available as a glyph in the font, the SUBJOINER will be displayed visibly along with the regular glyph of the letter whose nucleus is missing. For example, if the nucleus 𑖑 of 𑖑 KA is unavailable, then a sequence such as <𑖑 NGA, ◻ SUBJOINER, 𑖑 KA> will be rendered as 𑖑◻𑖑 instead of the expected 𑖑.

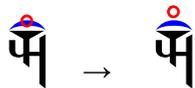

4.14.6 Placement of multiple combining signs

When multiple signs occur combine with a base letter in the same position, it may be necessary to adjust the glyphs in order to prevent clashing. This may be achieved in various ways depending upon the position of the sign.

Below-base signs such as ◌ VOWEL SIGN UE and ◌ VOWEL SIGN U commonly occur alongside final-consonant signs. In such cases the size and position of the vowel signs are modified in order to accommodate the placement of both signs. Depending upon the depth of the vertical bar, the vowel signs may be compressed horizontally:

Above-base marks such as ◌ ANUSVARA commonly occur with other above-base signs. In such cases, the marks need to be adjusted vertically in order to prevent clashing. Marks are positioned one above the other according to conventional rules for ordering.

4.14.7 Adjustments for Positioning of the Gemination Mark

There are different ways of rendering the ◌ GEMINATION MARK. One method is for the mark to protrude above the normal letter height. Another way is to align the top of the mark with the letter height. This second method requires lowering or vertical compression of the base triangle.

Compressing the GEMINATION MARK and base triangle, as shown to the right in the above allows uniformity in the positioning of above-base vowel signs and other marks.

5 Character Data

5.1 Character Properties

Character properties given in the format of `UnicodeData.txt`:

5.2 Linebreaking Properties

Linebreaking properties given in the format of LineBreak.txt:

```

11A50; AL          # LETTER A
11A51..11A5B; CM  # VOWEL SIGN I .. VOWEL LENGTH MARK
11A5C..1181F; AL  # LETTER KA .. LETTER KSSA
11A84..11A87; CM  # CLUSTER-INITIAL LETTER RA .. CLUSTER-INITIAL LETTER SA
11A88..11A93; CM  # FINAL CONSONANT SIGN G .. FINAL CONSONANT SIGN -A
11A94..11A95; CM  # SIGN ANUSVARA .. SIGN VISARGA
11A96; CM          # GEMINATION MARK
11A97; CM          # SUBJOINER
11A98..11A9A; BA  # TSHEG .. DOUBLE SHAD
11A9B..11A9D; BB  # HEAD MARK WITH TRIPLE FLAME .. HEAD MARK WITH CANDRABINDU
11A9E..11AA0; BA  # TERMINAL MARK-1 .. TERMINAL MARK-3

```

5.3 Syllabic Categories

Syllabic categories given in the format of IndicSyllabicCategory.txt:

```

# Indic_Syllabic_Category=Bindu
11A94      ; Bindu      # Mn      SIGN ANUSVARA

# Indic_Syllabic_Category=Visarga
11A95      ; Visarga    # Mc      SIGN VISARGA

# Indic_Syllabic_Category=Virama
11A97      ; Virama     # Mn      SUBJOINER

# Indic_Syllabic_Category=Vowel_Independent
11A50      ; Vowel_Independent # Lo      LETTER A

# Indic_Syllabic_Category=Vowel_Dependent
11A51..11A56 ; Vowel_Dependent # Mn      [6] VOWEL SIGN I .. VOWEL SIGN O
11A57..11A58 ; Vowel_Dependent # Mc      [2] VOWEL SIGN AI .. VOWEL SIGN AU
11A59..11A5A ; Vowel_Dependent # Mn      [2] VOWEL SIGN VOCALIC R .. VOWEL SIGN VOCALIC L
11A5B      ; Vowel_Dependent # Mc      VOWEL LENGTH MARK

# Indic_Syllabic_Category=Consonant
11A5C..1181F ; Consonant      # Lo      [40] LETTER KA .. LETTER KSSA
11A84..11A87 ; Consonant      # Lo      [4] CLUSTER INITIAL RA .. CLUSTER INITIAL SA

# Indic_Syllabic_Category=Consonant_Final
11A88..11A93 ; Consonant_Final # Mc      [12] FINAL CONSONANT SIGN G .. FINAL CONSONANT SIGN -A

```

A new category should be established for the four Soyombo cluster-initial letters. This category is tentatively named `Consonant_Prefixed`:

```
# Indic_Syllabic_Category=Consonant_Prefixed
11A84..11A87 ; Consonant_Prefixed # Lo [4] CLUSTER-INITIAL LETTER RA .. CLUSTER-INITIAL LETTER SA
```

5.4 Positional Categories

Positional data for Soyombo combining signs in the format of IndicPositionalCategory.txt:

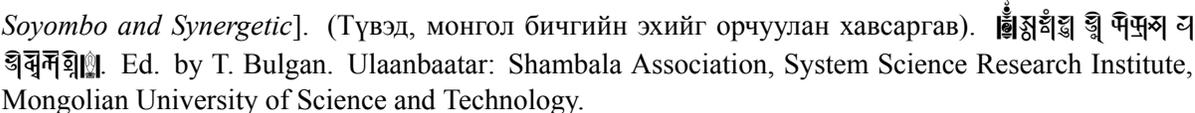

```
# Indic_Positional_Category=Right
11A57..11A58 ; Right # Mc [2] VOWEL SIGN AI .. VOWEL SIGN AU

# Indic_Positional_Category=Top
11A51 ; Top # Mn VOWEL SIGN I
11A54..11A54 ; Top # Mn [4] VOWEL SIGN E .. VOWEL SIGN O

# Indic_Positional_Category=Bottom
11A52..11A53 ; Bottom # Mn [2] VOWEL SIGN UE .. VOWEL SIGN U
11A59..11A5A ; Bottom # Mn [2] VOWEL SIGN VOCALIC R .. VOWEL SIGN VOCALIC L
11A5B ; Bottom # Mc VOWEL LENGTH MARK
```

7 Acknowledgments

I express my gratitude to Agata Bareja-Starzyńska (University of Warsaw, Poland) for sharing her knowledge of the script, for her diligent review of the information I have presented, and for enlightening discussions on the script and comments regarding the character repertoire, character names, encoding order, and language-specific transliterations. I am thankful to Byambaa Ragchaagiin, who provided a copy of his book *Занабазарын Дөрвөлжин Үсэг*, which contains several manuscripts and other records which facilitated my analysis of the Soyombo script. I also owe thanks to Shriramana Sharma, Peter Constable (Microsoft), and György Kara (Indiana University, Bloomington), John Hudson (Tiro Typeworks), and Andrew Glass (Microsoft) for reviewing previous proposals and earlier drafts of this proposal and for providing detailed comments on various aspects of the encoding.

This project was made possible in part through a Google Research Award, granted to Deborah Anderson for the Script Encoding Initiative. Research for an earlier phase of this project was made possible in part by a grant from the United States National Endowment for the Humanities, which funded the Universal Scripts Project (part of the Script Encoding Initiative at the University of California, Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of Google or the National Endowment for the Humanities.

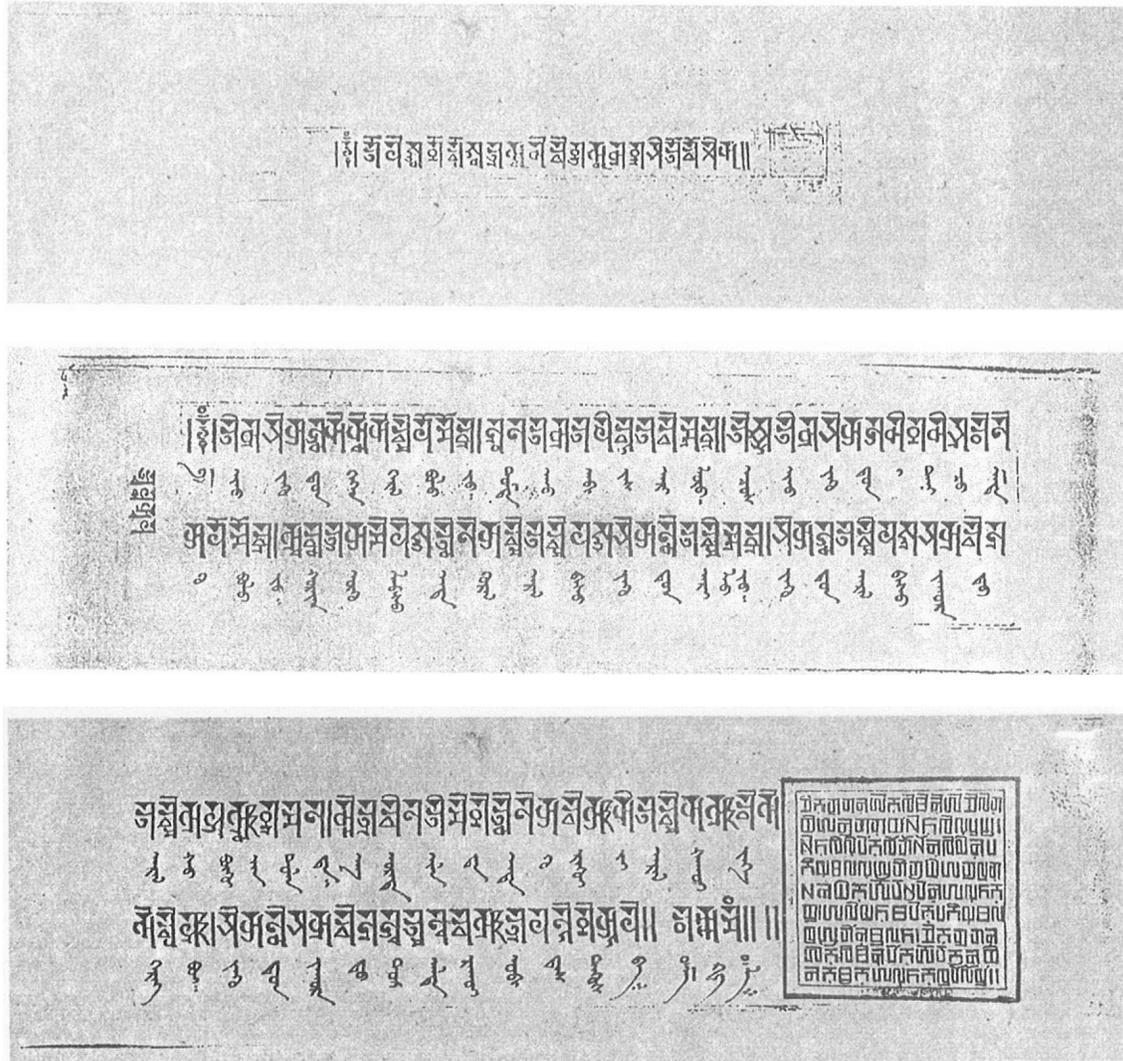

Figure 1: A manuscript containing Mongolian text in the Soyombo and Mongolian scripts (from Byambaa Ragchaagiin 2005: 63, 64). The last folio contains text in the Zanabazar Square Script.

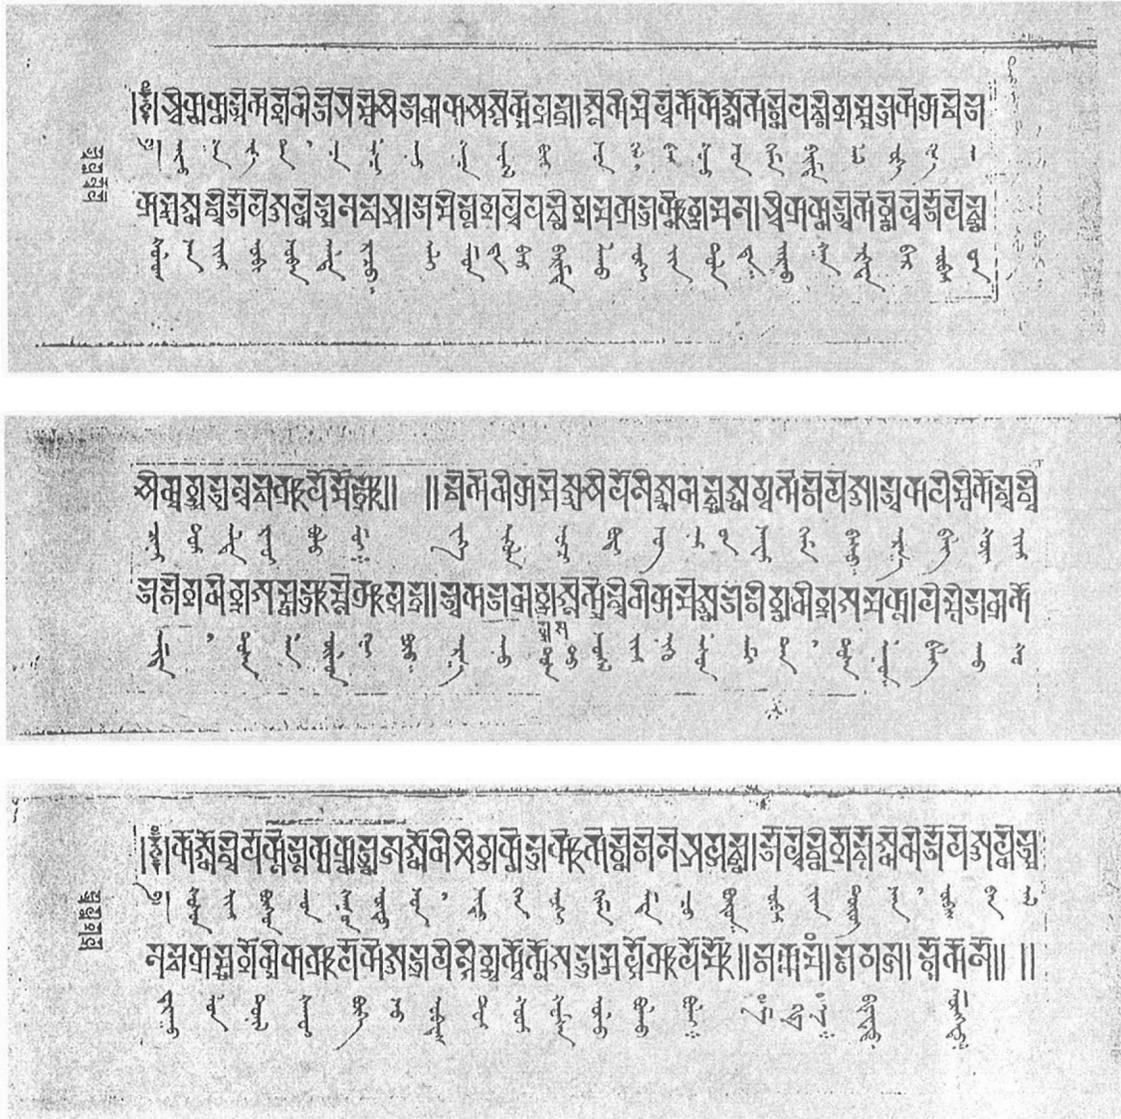

Figure 2: A manuscript containing Mongolian text in the Soyombo and Mongolian scripts (from Byambaa Ragchaagiin 2005: 64). Continued from figure 1.

Figure 4: A manuscript from Mongolia with Sanskrit text written in Ranjana, Soyombo, Zanabazar Square, and Tibetan scripts (from Byambaa Ragchaagiin 2005: 97).

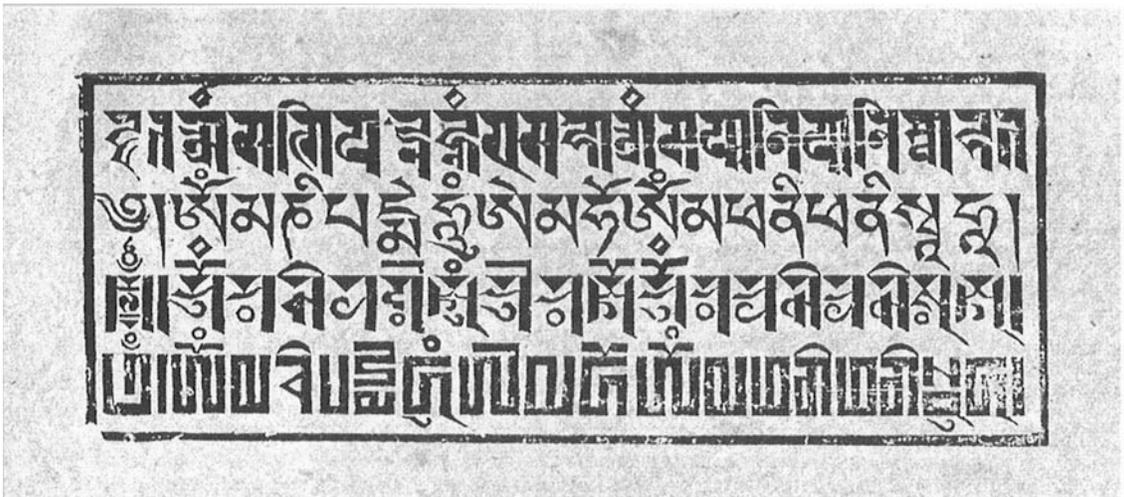

Figure 5: A manuscript from Mongolia with Sanskrit text written in the Ranjana, Tibetan, Soyombo, and Zanabazar Square scripts (from Byambaa Ragchaagiin 2005: 98).

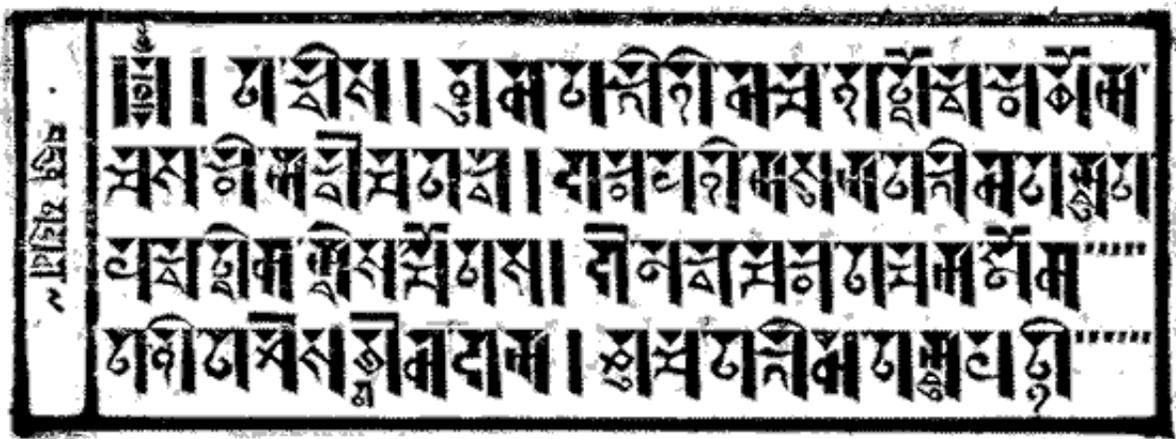

Figure 6: A Soyombo manuscript showing use of 'TSHEG' (from Mongolwiki 2008).

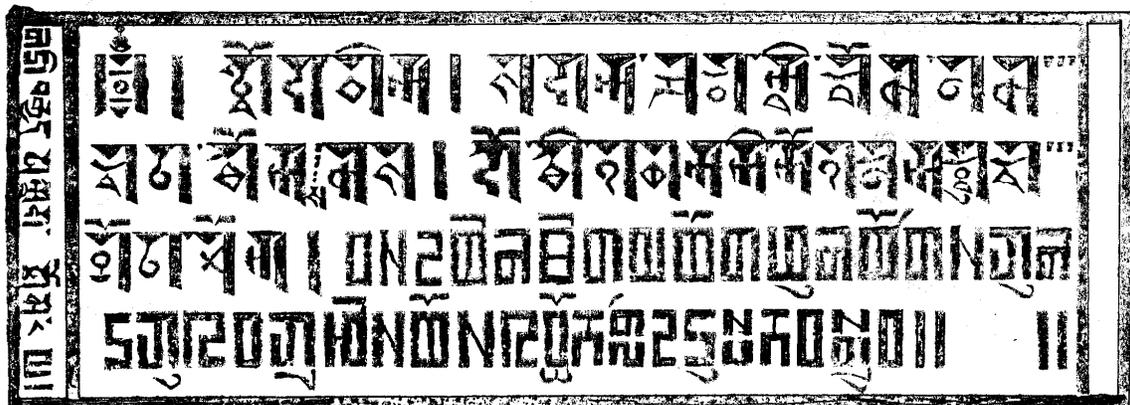

Figure 7: A manuscript in Soyombo and Zanabazar Square showing use of [] CLUSTER INITIAL LETTER SA and [] CLUSTER INITIAL LETTER RA (from Shagdarsüring 2001: 173).

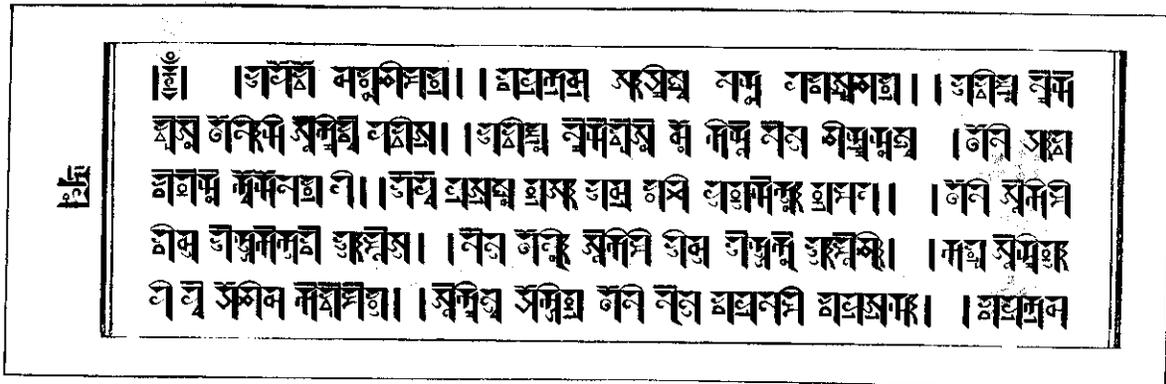

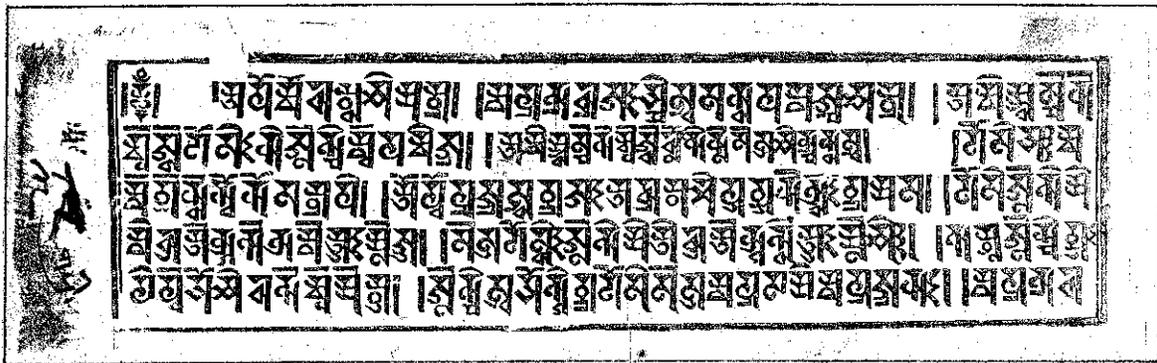

Figure 8: Soyombo manuscript (above) with what appears to be a digitized reproduction (from Shagdarsüring 2001: 155).

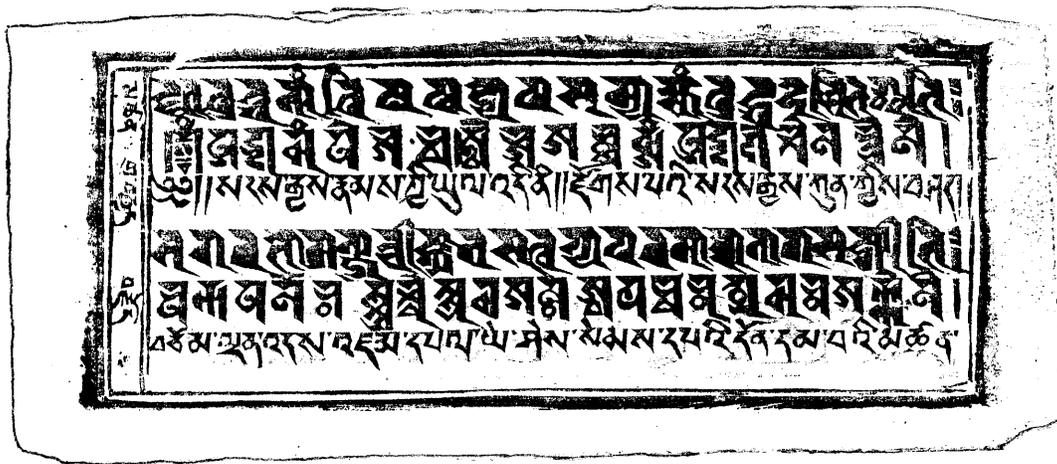

Figure 9: Manuscript folio in Ranjana, Soyombo, and Tibetan (from Shagdarsüring 2001: 156).

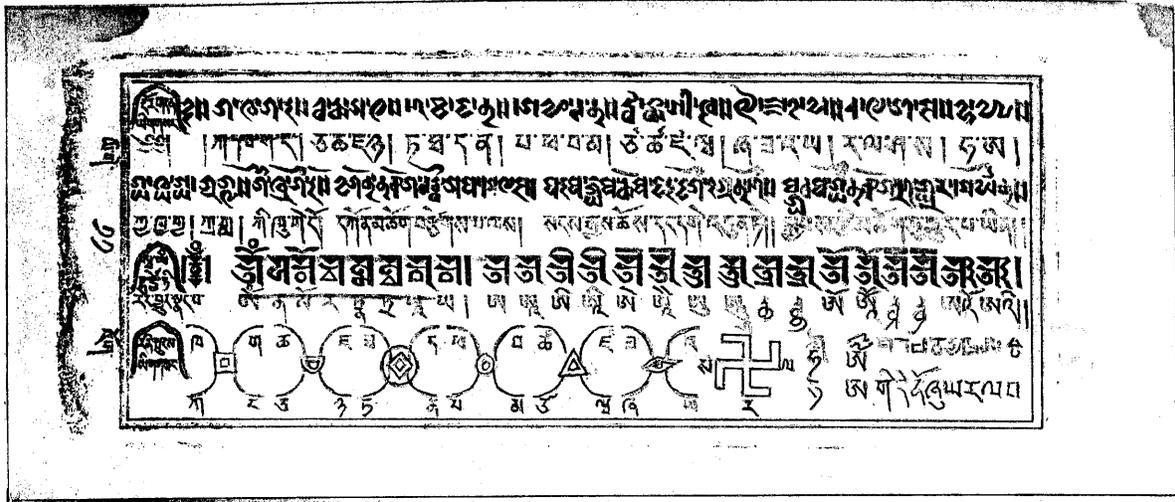

Figure 10: Manuscript folio in various Tibetan scripts and Soyombo (from Shagdarsürüng 2001: 154).

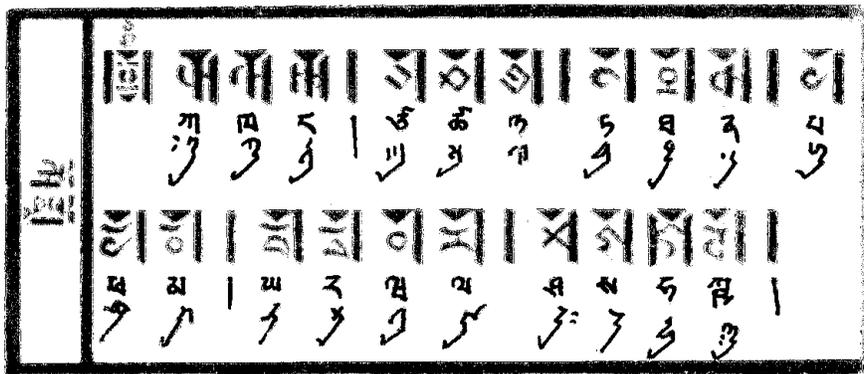

Figure 11: Manuscript folio showing corresponding Tibetan and Mongolian letters for Soyombo (from Shagdarsürüng 2001: 154).

Figure 12: Sample of text in Soyombo (from Rintschen 1952: 65).

Figure 13: The *tamga* of Bogd Khan from 1911. From left to right, the seal contains Soyombo, Mongolian, and Phags-pa.

‘A’	‘B’	‘C’
source text	normative	normative
vertical top-to-bottom left-to-right	vertical top-to-bottom left-to-right	horizontal left-to-right top-to-bottom

Figure 14: Seal showing Soyombo text in idiosyncratic vertical orientation (from Shagdarsürüng 2001: 150). The seal reads: *naya seel kör yenu dzur kha grva chanun temedeg*. Agata Bareja-Starzyńska has related through personal communication that it is a seal of one of the Buddhist monastic colleges in the capital city before 1924. She notes that the text contains several errors and has suggested that it might more accurately be read as *neyislel küriyen-ü jiruqai grva-tshang temdeg* “The seal of the astrological college of the capital city”.

Figure 16: Xylograph (block print) of a book cover in Soyombo, Zanabazar Square, Mongolian, and Cyrillic (from Boldsaikhan 2005: 330). The Zanabazar Square text represents Tibetan, the Mongolian represents Mongolian, and the Cyrillic represents Modern (Khalkha) Mongolian.

Figure 17: The inscription reads *om mani padme hum* (from Eye of Tengri).

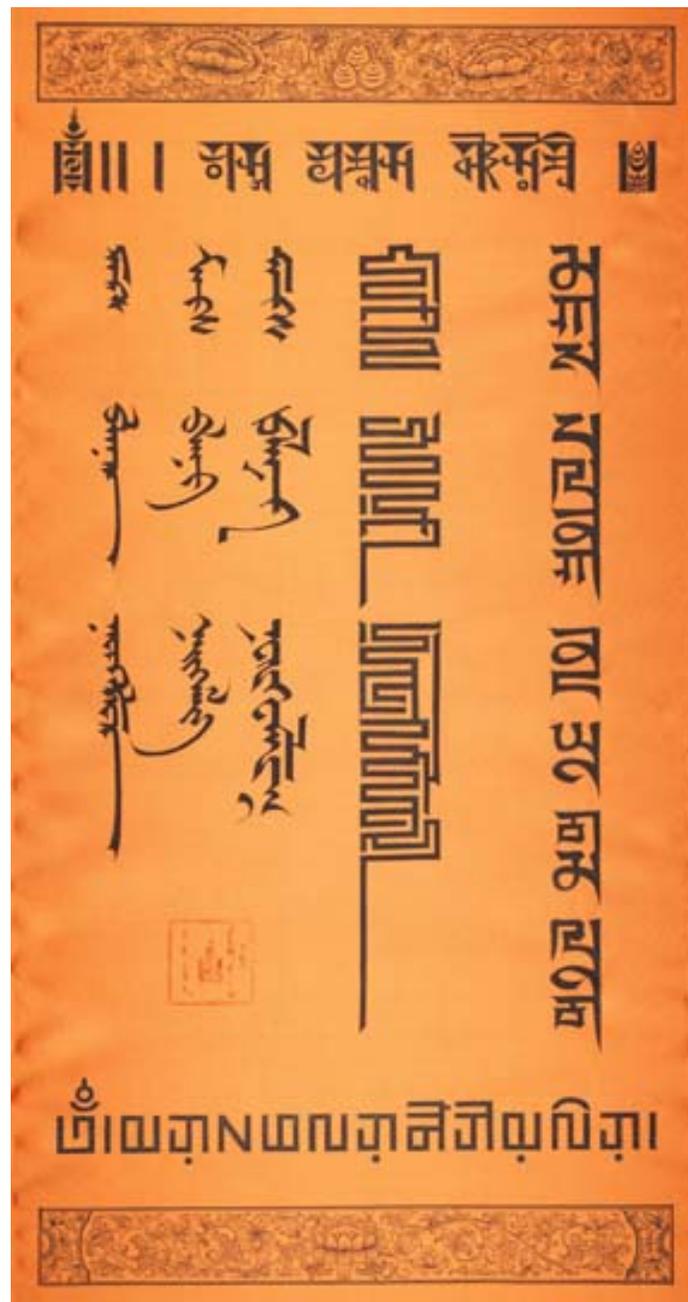

Figure 18: A souvenir written for the Max Planck Institute containing seven scripts used in Mongolia.

Table 12: Variations of head marks used in Soyombo.

Table 13: Variations of terminal marks used in Soyombo.

Figure 19: Photograph of a chart of the Soyombo script (from “Histoire du livre” 2010).

Figure 22: Traditional chart of Soyombo (from Shagdarsüring 2001: 152).

Хуудас эхлэсний тэмдэг. Номд бярга буюу эгчим ()-тэй адил үүрэгтэй. Соёмбо бичгийн энэ тэмдэг монголчуудын хувьд тусгаар тогтнолын бэлгэдэл болжээ.

Figure 23: Description of Soyombo vowels (from Shagdarsüring 2001: 133).

1. **tl. A; tc. mong., tib., sans. a**
Энэ хэлбэр нь а эгшигийн бие даасан (IF) буюу үгийн (зарим тохиолдолд үеийн) эхинд тохиолдоно. Жишээлбэл:
- tl. A-li;
tc. a-li.**
- (\emptyset) **tl. a_o; tc. a.** Энэ нь а эгшигийн гол хэлбэр (MF) буюу үгийн (зарим тохиолдолд үеийн) дунд болоод адагт тохиолдох нууц буюу тэг (\emptyset) хэлбэр. Жишээлбэл:
- tl. Ga_o-Ja_or;
tc. ga-jar**
- 1.a. **tl. ā; tc. ā.** Урт а эгшигийн бие даасан буюу (IF) хэлбэр. Жишээ нь:

tl. ü; tc. mong., sans. ü. Энэ нь монгол болон самгардын урт *ü* эгшигийн бие даасан буюу (IF) хэлбэр. Жишээ нь:

¹⁵ Соёмбо бичгийн "Итгэл"-д төвөд хэлний *tib. gyu* гэдэг үгийг *ya-gaul* (<Mo. *yaγayul) хэмээн орчуулсан нь буй. Энэ үгийг Ойродын Зая Бандидын орчуулсан тод "Итгэл"-д *ündüsün* гэж, буриад бичмэлд *siltayan* хэмээн орчуулжээ. Энэ тухай G. Kara, *Un texte mongol en écriture soyombo*, - АОН, Tomus. IX, Fasc. 1, Budapest, 1959, pp. 1-38 болон Chagdarsureng, *Sur quelques traductions mongoles du "Natha"*, - *Studia Mongolica*, Tom. 2 (10), Fasc. 11, Ulan-Bator, 1975, p. 183 (N. 86) -д үзмүү.

Figure 26: Description of Soyombo vowels (from Shagdarsürüng 2001: 136).

		tl. \bar{u} -Da _o m; tc. \bar{u} -dam.
		tl. \bar{u} ; tc. \bar{u} . Урт \bar{u} эгшигийн (MF) хэлбэр. Жишээ нь:
		tl. A-R \bar{u} l; tc. \bar{a} -r \bar{u} l.
5.		tl. O; tc. mong., tib. o, sans. diphtongue o. Энэ нь монгол, төвөд хэлний ерийн о эгшиг, самгард хэлний хос о эгшигийн бие даасан (IF) хэлбэр. Жишээлбэл:
		tl. O-Ron; tc. o-ron.
		tl. o; tc. o. Энэ нь о эгшигийн гол буюу (MF) хэлбэр. Жишээ нь:
		tl. Oi-Ro; tc. oi-ro.
6 a.		tl. \bar{o} ; tc. mong. \bar{o} , sans. diphtongue au. Энэ нь монгол хэлний урт о болон самгард хэлний au хос эгшигийн бие даасан (IF) хэлбэр. Жишээлбэл:
		tl. \bar{o} -sor; tc. \bar{o} -sor.
		tl. \bar{o} ; tc. \bar{o} . Энэ нь урт о эгшигийн гол буюу (MF) хэлбэр. Жишээ нь:
		tl. K \bar{o} -son; tc. k \bar{o} -son.
7.		tl. $\bar{ö}$; tc. mong. $\bar{ö}$. Энэ нь $\bar{ö}$ эгшигийн бие даасан (IF) хэлбэр бөгөөд зөвхөн монгол хэлнээ тохиолдоно. Жишээлбэл:
		tl. $\bar{ö}$ -m $\bar{ö}$ g; tc. $\bar{ö}$ -m $\bar{ö}$ g.
		tl. $\bar{ö}$; tc. $\bar{ö}$. Монгол хэлний $\bar{ö}$ эгшигийн гол буюу (MF) хэлбэр. Жишээ нь:
		tl. $\bar{ö}$ -m \bar{o} -n \bar{o} ; tc. $\bar{ö}$ -m \bar{o} -n \bar{o} .
7 a.		tl. $\bar{ö}$; tc. mong. $\bar{ö}$. Монгол хэлний урт $\bar{ö}$ эгшигийн бие даасан (IF) хэлбэр. Жишээлбэл:
		tl. $\bar{ö}$ r; tc. $\bar{ö}$ r.

Figure 27: Description of Soyombo vowels (from Shagdarsüring 2001: 137).

-  **tl.** \bar{o} ; **tc.** \bar{o} . Урт \bar{o} эгшигийн гол буюу (MF) хэлбэр. Жишээ нь:
-  **tl.** $B\bar{o}r$;
tc. $b\bar{o}r$.
8.  **tl.** Au_2 ; **tc.** mong. au буюу diphthongue 'waw'. Энэхүү хос эгшигийн талаар цагаан толгойн жагсаалтын 5-ын u_2 -аас лавшруулан үзнэ үү.
9.  **tl.** Ai_2 ; **tc.** mong. ai буюу diphthongue 'yod'. Энэхүү хос эгшигийн талаар цагаан толгойн жагсаалтын 2-ын i_2 -аас лавшруулан үзнэ үү.
10.  **tl.** mong. G(a), tib., sans: K(a); **tc.** mong. ga, tib., sans; ka. Энэ нь монгол хэлний g(a), төвөд, самгардын k(a) гийгүүлэгчийн бие даасан (IF) хэлбэр.
-  **tl.** Ga_0 - Ja_0r ;
tc. ga-jar.
-  **tl.** g; **tc.** g. Энэ нь монгол хэлний гийгүүлэгчийн гол (MF) хэлбэр бөгөөд амьгүй буюу дэвсгэрлэж ордог хэлбэр. Жишээ нь:
-  **tl.** Ka_0 - mu_1g ;
tc. ka-mug.
-  **tl.** sans. k; **tc.** sans. k. Зөвхөн самгард хэлнээ тохиолдоно. Жишээ нь:
-  **tl.** kKa_0 ;
tc. kka.
11.  **tl.** mong. K(a), tib., sans.: KH(a); **tc.** mong. ka, tib., sans.: kha. Монгол хэлний ka; төвөд, самгард хэлний гийгүүлэгчийн бие даасан (IF) хэлбэр. Жишээлбэл:
-  **tl.** Ka_0 - mu_1g ;
tc. ka-mug.
-  **tl.** (k) / kh; **tc.** (k) / kh. Энэ нь (k) / kh гийгүүлэгчийн гол буюу (MF) хэлбэр. Монгол бичгийн хэлний зөв бичих зүйд энэ гийгүүлэгч дэвсгэрлэж ордоггүй. Харин Тод бичигт дэвсгэрлэж ордог ёсон буй.
12.  **tl.** tib., sans: N(a); **tc.** tib., sans.: na. Энэ нь төвөд, самгард хэлний гүн угийн гийгүүлэгчийн бие даасан буюу (IF) хэлбэр. Монгол хэлнээ эл гийгүүлэгч нь үгийн болон үеийн эхинд тохиолддоггүй учир монгол бичвэрт ийм хэлбэр хэрэглэгдэхгүй.
-  **tl.** mong. \underline{n} / tib., sans.: \underline{n} ; **tc.** mong. \underline{n} / tib., sans.: \underline{n} . Энэ нь $\underline{n}/\underline{n}$ гийгүүлэгчийн гол буюу (MF) хэлбэр. Монгол хэлнээ зөвхөн үеийн эцэст тохиолдоно.
-  **tl.** Ji_1r - Ga_0 - $La_0\underline{n}$;
tc. jir-ga-lan.

Figure 28: Description of Soyombo consonants (from Shagdarsüring 2001: 138).

13.  **tl.** mong. J(a), tib., sans.: C(a).
tc. mong. ja (i -гээс бусад эгшигийн өмнө) / ja(i эгшигийн өмнө), tib., sans.: ca. Энэ нь монгол хэлний ja/ ja, төвөд, самгардын ca гийгүүлэгчийн бие даасан (IF) хэлбэр. Жишээлбэл:
-  **tl.** Ja₀r-Li₁g;
tc. jar-lig.  **tl.** Ji₁r-Ga₀-La₀n;
tc. jir-ga-lan.
14.  **tl.** mong. C(a), tib., sans.: CH(a);
tc. mong. ca (i -гээс бусад эгшигийн өмнө) / ца (зөвхөн i эгшигийн өмнө); tib., sans.: cha. Энэ нь монгол хэлний ca / ца, төвөд, самгард хэлний cha гийгүүлэгчийн бие даасан (IF) хэлбэр. Жишээлбэл:
-  **tl.** Ca₀γ -ga₀-ca₀;
tc. ca-ga-ca (<Mo. čay-ača).
-  **tl.** Ci₁-Na₀;
tc. či-nar.  **tl.** Ci₁u₂l-Ga₀-Nu₁;
tc. čiul-ga-nu
 (<Mo. ciyulyan-u).
15.  **tl.** tib., sans.: \bar{N} (a);
tc. tib., sans.: ṅa. Төвөд, самгард хэлний гийгүүлэгчийн бие даасан (IF) хэлбэр.
16.  **tl.** mong. D(a), tib., sans.: t(a);
tc. mong. da, tib., sans. ta. Монгол хэлний da, төвөд самгард хэлний ta гийгүүлэгчийн бие даасан буюу (IF) хэлбэр. Жишээлбэл:
-  **tl.** Da₀-ga₀n;
tc. da-gan (< Mo. daγa-).
-  **tl.** mong. d, tib., sans.: t;
tc. mong. d, tib., sans.: t. Монгол хэлний d, төвөд, самгард хэлний t гийгүүлэгчийн гол буюу (MF) хэлбэр. Жишээлбэл:
-  **tl.** Ki-Ged;
tc. ki-ged (< Mo. kiged).
17.  **tl.** mong. T(a); tib., sans.: TH(a);
tc. mong. ta, tib., sans.: tha. Монгол хэлний ta, төвөд, самгард хэлний tha гийгүүлэгчийн бие даасан буюу (IF) хэлбэр. Жишээлбэл:
-  **tl.** Ta₀-Ra₀g-Sa₀n;
tc. ta-rag-san (< Mo. tara-).
18.  **tl.** mong., tib., sans.: N(a);
tc. mong., tib., sans.: na. Монгол, төвөд, самгард хэлний na гийгүүлэгчийн бие даасан (IF) хэлбэр. Жишээ нь:
-  **tl.** Na₀-Ra₀;
tc. na-ra.

Figure 29: Description of Soyombo consonants (from Shagdarsüring 2001: 139).

-  **tl.** n.
tc. n. Монгол, төвөд, самгард хэлний n гийгүүлэгчийн гол буюу (MF) хэлбэр. Жишээ нь:
-  **tl.** Na₀-Ya₀n;
tc. na-yan.
19.  **tl.** mong. B(a), tib., sans.: P(a);
tc. mong. ba, tib., sans.: pa. Монгол хэлний ba, төвөд, самгард хэлний pa гийгүүлэгчийн бие даасан буюу (IF) хэлбэр. Жишээлбэл:
-  **tl.** Ba₀-Ri₁-
tc. ba-ri- (Mo. bari-).
-  **tl.** mong. b, tib., sans.: p;
tc. mong. b, tib., sans.: p.
Монгол хэлний b, төвөд, самгард хэлний p гийгүүлэгчийн гол буюу (MF) хэлбэр. Жишээлбэл:
-  **tl.** El-Deb;
tc. el-deb.
20.  **tl.** mong. P(a), tib., sans.: PH(a);
tc. mong. pa, tib., sans.: pha. Монгол хэлний pa, төвөд, самгард хэлний pha гийгүүлэгчийн бие даасан буюу (IF) хэлбэр нь.
21.  **tl.** mong., tib., sans.: M(a);
tc. mong., tib., sans.: ma. Монгол, төвөд, самгард хэлний ma гийгүүлэгчийн бие даасан (IF) хэлбэр. Жишээ нь:
-  **tl.** Ma₀-Si₁;
tc. ma-si.
-  **tl.** m;
tc. m. Энэ нь m гийгүүлэгчийн гол буюу (MF) хэлбэр. Жишээлбэл:
-  **tl.** Er-Dem;
tc. er-dem.
-  **tl.** tib., sans.: (O)m;
tc. tib., sans.: (o)m. Энэ нь төвөд, самгард бичвэрт, тарнийн хэлнээ тохиолдоно. Уугуул монгол хэлнээ тохиолдохгүй.
22.  **tl.** mong., tib.: Y(a), sans.: semi-vowel Y(a);
tc. mong., tib., ya, sans.: semi-vowel ya. Монгол, төвөд хэлний y гийгүүлэгч, самгард хэлний заримдаг (тал) y эгшигийн бие даасан (IF) хэлбэр.
-  **tl.** Ya₀-Ga₀u₂;
tc. ya-gaul (Энэ бөлөгийн 15-р зүүлтээс тодруулна уу.)

Figure 30: Description of Soyombo consonants (from Shagdarsürüng 2001: 140).

-  **tl.** tib., sans.: y(a);
tc. tib., sans.: ya. Хэдийгээр энэ нь монгол, төвөд хэлний хувьд у гийгүүлэгч, самгард хэлний тухайд заримдаг (буюу тал) у эгшигийн гол (MF) хэлбэр мөн боловч хэрэглээ нь хязгаартай. Үүнд: соёмбо бичигийн цагаан толгойгоос үзэхэд нэгд, монгол хэлний дэвсгэр гийгүүлэгчид багтаагаагүй ажээ; хоёрт, төвөд болон самгард хэлнээ зүүлтэт үсэгт тохиолдохоор тэмдэглэжээ.
-  **tl.** Kya₀;
tc. kya.
23.  **tl.** mong., tib., sans.: R(a);
tc. mong., tib.: ra, sans.: semi-vowel ra. Энэ нь монгол, төвөд хэлний га гийгүүлэгч, самгард хэлний га хэмээх заримдаг (буюу тал) эгшигийн бие даасан (IF) хэлбэр. Жишээлбэл:
-  **tl.** Ja₀u₂-Ra₀-Da₀;
tc. jau-ra-da (< Mo. jayuradu ~ jayurada)
-  **tl.** mong., tib.: r, sans.: (semi-vowel) r;
tc. mong., tib.: r, sans.: (semi-vowel) r. Монгол, төвөд хэлний г гийгүүлэгч, самгард хэлний г хэмээх заримдаг (буюу тал) эгшигийн гол (MF) хэлбэр нь. Монгол хэлнээ дэвсгэрлэж орохдоо энэхүү гол хэлбэрийг дундуур нь таллаж, тал гурвалжин хэлбэрээр тэмдэглэнэ. Жишээ нь:
-  **tl.** Er-Dem;
tc. er-dem.
- Харин төвөд, самгард хэлний давхар үсгийн тухайд, г гийгүүлэгч (буюу заримдаг эгшиг)-ийн гол хэлбэрийг хялбарчлахгүй, яг хэвээр нь толгой, зүүлт болгож бичдэг. Жишээлбэл:
-  **tl.** Kra₀;
tc. kra.
-  **tl.** rKa₀;
tc. rka.
24.  **tl.** tib., V(a), sans.: (semi-vowel): V(a);
tc. tib. va, sans.: (semi-vowel): va. Төвөдийн va гийгүүлэгч, самгардын заримдаг (буюу тал) va эгшигийн бие даасан (IF) хэлбэр нь.
-  **tl.** tib., sans.: v(a);
tc. tib., sans.: va.
 Энэ нь төвөд, самгардын давхар үсэгт v(a) зүүлт болж ордог гол (MF) хэлбэр. Үүнийг эл бөлөгийн No. 63-аас тодруулан үзмүү.
25.  **tl.** mong., tib.: L(a), sans.: (semi-vowel): L(a);
tc. mong., tib.: la, sans.: (semi-vowel): la. Энэ нь Монгол, төвөд хэлний l гийгүүлэгч, самгард хэлний l хэмээх заримдаг (буюу тал) эгшигийн бие даасан (IF) хэлбэр нь. Жишээлбэл:
-  **tl.** Nom-La₀g-Sa₀n;
tc. nom-lag-san.

Figure 31: Description of Soyombo consonants (from Shagdarsüring 2001: 141).

-  **tl.** mong., tib.: l, sans.: (semi-vowel): l;
tc. mong., tib.: l, sans.: (semi-vowel): l.
Энэ нь монгол, төвөд хэлний l гийгүүлэгч, самгардын заримдаг (буюу тал) l эгшигийн гол (MF) хэлбэр. Жишээлбэл:
-  **tl.** Bel-ge;
tc. bel-ge.
- Харин энэхүү (MF) хэлбэр нь төвөд, самгардийн давхар үсэгт толгой болж орохдоо ганц хөндлөн зураас болж ордог. Тухайлбал:
-  **tl.** lKa₀;
tc. lka.
26.  **tl.** mong. Š(a), tib., sans. Ç(a) / Ś(a).
tc. mong. ša, tib., sans.: ça / śa. Энэ нь монгол хэлний ša, төвөд, самгард хэлний ça буюу śa гийгүүлэгийн бие даасан (IF) хэлбэр. Жишээлбэл:
-  **tl.** Teg-še;
tc. teg-še.
-  **tl.** mong. š;
tc. mong. š. Энэ нь š гийгүүлэгчийн монгол хэлэнд тохиолдох гол буюу (MF) хэлбэр. Соёмбо бичигийн цагаан толгойноос үзэхэд үүнийг монгол хэлний дэвсгэр үсэгт багтаажээ (Тод бичигт ч бас ийм буй). Тухайлбал:
-  **tl.** Aš;
tc. aš.
- Самгард хэлнээ, давхар үсэгт энэ гийгүүлэгчийг толгой болгож залгахдаа (MF) хэлбэрийг таллаж арай хялбарчлан тэмдэглэдэг бөлгөө.
-  **tl.** çKa₀;
tc. çka.
27.  **tl.** mong., tib., sans. S(a);
tc. mong., tib., sans. sa. Sa гийгүүлэгчийн бие даасан (IF) хэлбэр.
-  **tl.** Sa₀-Ra₀;
tc. sa-ra.
-  **tl.** s; **tc.** s. Энэ нь sa гийгүүлэгчийн гол буюу (MF) хэлбэр. Монгол хэлний тухайд дэвсгэрлэж орох хэлбэр гэсэн үг. Жишээлбэл:
-  **tl.** Te-güs;
tc. te-güs.
- Төвөд, самгард хэлний давхар үсэгт sa толгойг бичихдээ бяцхан гурвалжин болгож доорхи байдлаар тэмдэглэнэ.

Figure 32: Description of Soyombo consonants (from Shagdarsüring 2001: 142).

- 
 tl. sKa₀;
 tc. ska.
28. 
 tl. mong., tib., H(a), sans.: (semi-vowel): H(a);
 tc. mong., tib. ha, sans.: (semi-vowel): ha. Энэ нь монгол, төвөд хэлний ha гийгүүлэгч, самгард хэлний заримдаг (буюу тал) ha эгшигийн бие даасан (IF) хэлбэр.
29. 
 tl. sans. (compount consonant): KS(a);
 tc. sans. (compount consonant): ksa.
 Самгард хэлний нийлмэл гийгүүлэгч ksa -гийн бие даасан (IF) хэлбэр.
30. 
 tl. mong., Ag, tib., sans.: Ak;
 tc. mong. ag, tib., sans.: ak. Монгол хэлний дэвсгэр -g гийгүүлэгчийн хэлбэр (Уг үсгийн талаар жагсаалтын No. 10-аас тодруулан үзнэ үү).
31. 
 tl. mong. Ak, tib., sans.: Akh;
 tc. mong. ak, tib., sans. akh. Дэвсгэрлэж орох -k гийгүүлэгчийн хэлбэр (Уг үсгийн талаар жагсаалтын No. 11-аас тодруулан үзнэ үү).
32. 
 tl. mong. An, tib., sans.: An;
 tc. mong. an, tib., sans. an. Монгол хэлний дэвсгэр -n гийгүүлэгчийн хэлбэр (Уг үсгийн талаар жагсаалтын No. 12-аас тодруулан үзнэ үү).
33. 
 tl. mong. Ad, tib., sans.: At;
 tc. mong. ad, tib., sans.: at; Монгол хэлний дэвсгэр -d гийгүүлэгчийн хэлбэр (Уг үсгийн талаар жагсаалтын No. 16-аас тодруулан үзнэ үү).
34. 
 tl. mong. An, tib., sans.: An;

Соёмбо тэмдэг болон норов бадам тамгын тиг

Соёмбо тэмдэгийн тигийн хувьд бие даасан чиглэл болон хөгжсөнийг дурьдах хэрэгтэй юм. Ийм ч учраас түүнийг бүтээх тиг нь харилцан адилгүй хөгжсөөр иржээ. Үүнд зассан үзгээр бичих үсэгзүйн тигийн талаар гаргах тул бусад тигээс өөр байхыг анхаарахад илүүдэхгүй юм. Соёмбо тэмдэгийн тигийг үндсэн хоёр хуваана. Үүнд:

1. Өндөрийн хэмжээ

2. Уртын хэмжээ болой.

Өндөрийн хэмжээ нь 16 хувь байна. Үүнд:

1. Гал	3 хувь
2. Нар	2 хувь
3. Сар	2 хувь
4. Дээд талын чойнжүн	1.5 хувь
5. Дээд талын сум	1 хувь
6. Эвам	2 хувь
7. Доод талын сум	1 хувь
8. Доод талын чойнжүн	1.5 хувь
9. Завсарын тэмдэгүүд	2 хувь
Нийт	16 хувь болно

Норов бадам тамгын өндөрийн хэмжээ 8 хувь, өргөний хэмжээ 6 хувь байна. Хос шадны хоорондох норов бадамын дүрсийн өндөрийг 8 хувь, өргөнийг нь 4 хувьд багтаан зохистой сайхнаар бичнэ. /Зураг 51 /

Зураг 50

Өргөний хэмжээ нь 6 хувь байна.

Үүнд:

1. Гал	1.5 хувь
2. Нар	2.5 хувь
3. Сар	3 хувь
4. Чойнжүн	4 хувь
5. Хос шад тус бүр нэг хувь ба нийт 2 хувь болно.	
6. Дээд доод сум болон эвамыг 4 хувьд багтаан аль зохистойгоор бичнэ. /Зураг 50 /	

Зураг 51

**ISO/IEC JTC 1/SC 2/WG 2
PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS
FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC 10646¹**

Please fill all the sections A, B and C below.

Please read Principles and Procedures Document (P & P) from <http://std.dkuug.dk/JTC1/SC2/WG2/docs/principles.html> for guidelines and details before filling this form.

Please ensure you are using the latest Form from <http://std.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html>.

See also <http://std.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html> for latest Roadmaps.

A. Administrative

1. Title: **Proposal to Encode the Soyombo Script in ISO/IEC 10646**
2. Requester's name: *Script Encoding Initiative / Anshuman Pandey (anshuman.pandey@berkeley.edu)*
3. Requester type (Member body/Liaison/Individual contribution): *Liaison contribution*
4. Submission date: *2015-01-26*
5. Requester's reference (if applicable):
6. Choose one of the following:
- This is a complete proposal: *Yes*
- (or) More information will be provided later:

B. Technical – General

1. Choose one of the following:
- a. This proposal is for a new script (set of characters): *Yes*
- Proposed name of script: *Soyombo*
- b. The proposal is for addition of character(s) to an existing block:
- Name of the existing block:
2. Number of characters in proposal: *81*
3. Proposed category (select one from below - see section 2.2 of P&P document):
- A-Contemporary B.1-Specialized (small collection) B.2-Specialized (large collection)
- C-Major extinct D-Attested extinct E-Minor extinct
- F-Archaic Hieroglyphic or Ideographic G-Obscure or questionable usage symbols
4. Is a repertoire including character names provided? *Yes*
- a. If YES, are the names in accordance with the "character naming guidelines" in Annex L of P&P document? *Yes*
- b. Are the character shapes attached in a legible form suitable for review? *Yes*
5. Fonts related:
- a. Who will provide the appropriate computerized font to the Project Editor of 10646 for publishing the standard? *Anshuman Pandey*
- b. Identify the party granting a license for use of the font by the editors (include address, e-mail, ftp-site, etc.): *Awaiting permission from original font designers for use of their glyphs*
6. References:
- a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? *Yes*
- b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached? *Yes*
7. Special encoding issues:
- Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)? *Yes*

8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see Unicode Character Database (<http://www.unicode.org/reports/tr44/>) and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

¹ Form number: N4502-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05, 2009-11, 2011-03, 2012-01)

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? If YES explain	<i>Complete revision and expansion of N4414 L2/13-069; see proposal for changes</i>	Yes
2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? If YES, with whom? If YES, available relevant documents:	<i>Agata Bareja-Starzyńska (University of Warsaw, Poland) György Kara (Indiana University, Bloomington)</i>	Yes
3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? Reference:		Yes
4. The context of use for the proposed characters (type of use; common or rare) Reference:		Rare
5. Are the proposed characters in current use by the user community? If YES, where? Reference:	<i>By scholars of Mongolian culture, history, and linguistics</i>	Yes
6. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP? If YES, is a rationale provided? If YES, reference:		N/A
7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?		Yes
8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? If YES, is a rationale for its inclusion provided? If YES, reference:		No
9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters? If YES, is a rationale for its inclusion provided? If YES, reference:		No
10. Can any of the proposed character(s) be considered to be similar (in appearance or function) to, or could be confused with, an existing character? If YES, is a rationale for its inclusion provided? If YES, reference:		No
11. Does the proposal include use of combining characters and/or use of composite sequences? If YES, is a rationale for such use provided? If YES, reference: Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided? If YES, reference:	<i>Combining signs</i>	Yes Yes
12. Does the proposal contain characters with any special properties such as control function or similar semantics? If YES, describe in detail (include attachment if necessary)		Yes <i>Subjoiner</i>
13. Does the proposal contain any Ideographic compatibility characters? If YES, are the equivalent corresponding unified ideographic characters identified? If YES, reference:		No
