## Weights, Measures and Money: Standard Greek Weights and Money<sup>1</sup>

The ancient Greeks had two systems of measurement: one for wet, and one for dry products. The *kotyle*, which is the basic measure in both wet and dry systems, is made up of six *kyathoi* or four *oxybapha*. Its value is different depending on local variations, but it is roughly 1/4l.<sup>2</sup>

<sup>1</sup> Ancient Greeks used the same terminology for weights and currency. Many local variations existed but the Attic-Euboic system appears to have been dominant and this is the system presented in the table below.

### Weights, Measures and Money: Greek Characters for Roman Weights and Measures

Three Greek characters were used to represent weights (and occasionally measures) in the Roman system. The Roman system is based on the Libra or As, of 327.45g. This is divided into 12 Unciae. The Greek translations for these terms are Litra for Libra, and Ounkia<sup>3</sup> for Uncia.

Greek Litra Symbol	Λ		Versions without Unicode codepoints:   Versions with Unicode codepoints:  1D4C8  Example: Raeder 1.152
Greek Ounkia Symbol	Ϝ		Example: Hultsch 1.220
Greek Xestes Symbol	Ϟ		Versions without Unicode codepoints:  } All glyph variants of each other. Preferred form is Ϟ .  Versions with Unicode codepoints:  03BE + 0338  2241 (Sm)  Problematic version:  Technically an abbreviation, so not within Unicode's remit. Example: Hultsch 1.228

<sup>3</sup> Also *Onkia*. See LSJ 1268
