Title: SC2/WG2 Proposed Modification to Program of Work
Source: Project Editor
Distribution: SC2 and SC2/WG2 members and liaison organizations

SC 2/WG2 seeks the SC2’s and subsequently JTC 1’s endorsement for adding the following subproject to its Program of Work.

Project No.: JTC 1.02.10646.00.02 (ISO/IEC 10646/Amd. 2)
Title: Information technology -- Universal Multiple-Octet Coded Character Set (UCS) -- AMDNDMENT 2: N’Ko, Phoenician, Cuneiform, Phags-pa scripts, and other characters
Scope: Incorporate additional characters for N’Ko, Phoenician, Cuneiform, Phags-pa scripts, and other characters
Rationale: The proposed characters are based on contributions from several national body, liaison organizations and other linguists. These proposed characters were approved at the 45th WG 2 meeting held June 2004 by Resolution M45.20. DocumentN2836 contains the list of additional scripts and characters for this amendment annotated with a ** for Amendment 2 since it also includes Amendment 1 scripts and characters which are annotated with a single *.

Target Dates (completion):
Title: Summary of repertoire for FPDAM 1 and PDAM 2 of ISO/IEC 10646

Source: Asmus Freytag, contributing editor
Status: contributing editor’s summary of the character repertoire as a result of M45
Action: for review by WG2 and UTC experts
Distribution: WG2 and UTC members
Replaces: N2764 and L2 documents 04-266 and 04-237

Updates
Updated 06-24-2004 to reflect decisions at WG2 meeting 45

Status
The characters presented in this document include those that have been reviewed by SC2/WG2 and have been approved for addition to the FPDAM-1 or PDAM-2 documents with code positions and character names as shown in this document. The WG document number for all proposals has been provided for reference, as has the UTC document number for the convenience of UTC reviewers.

Most characters presented in this document have also been reviewed by the Unicode Technical Committee — where they have been approved by UTC for addition to a future version of the Unicode Standard, that information is presented in a marginal note. A series of $$$$ indicates the presence of a issue that needs to be resolved as part of synchronization.

Manner of Presentation
The characters have been presented in the same style that would be used for publishing the Unicode Standard, with the addition of marginal notes documenting the source of the characters. This was done deliberately in order to be able to document some of the draft annotations for the reviewers.

The character names and code points shown are the same for Unicode and ISO/IEC 10646, with exception of any ISO character name comments and Annex P annotation ‘*’, which are suppressed in this style of presentation. Where such omission occurs, it has been noted in an annotation.

Unlike the presentation style to be used for the actual amendment, but like document N2764 which this document replaces, the new characters are not shown in the context of the existing characters. The existing characters will be shown in the actual PDAM document. The occasional use of the word <reserved> in this draft is an artifact of the production process and should be ignored.

Note to Reviewers
Please review that this document accurately reflects the decisions taken at meeting M45, and if possible, alert the contributing editors to any discrepancies before the FPDAM-1 or PDAM-2 get issued for ballot.

Despite best efforts there may be minor discrepancies in this document, particularly in terms of this summary and the status information printed in the margins.

Contents
This document lists 2,398 characters. Existing characters for which glyph corrections have been requested are not shown in this summary of the approved repertoire, but they will be shown in the ballot documents. The following list shows all 51 blocks to which characters will be added. Entirely new blocks are indicated with a * for blocks added for AMD1, and ** for blocks added for the AMD2. Blocks with changes from the PDAM are noted with a +
