

A Preliminary Collection of Alchemical Symbols

Alchemy has been referred to as the proto-science. Symbols used by practioners often appear to have variants, but some early efforts towards 'standardization' were made by various authors and published in charts.

Many alchemical symbols are already encoded in Unicode. Some alchemy symbols survive in modern times as signs used in medicine, astrology, neo-paganism, and even chemistry.

There are also symbols shown in those early charts which do not appear to be currently available for plain text standard interchange.

For easy reference, some of the symbol charts are collected herein. The graphics which follow were taken from various web sites. Links to sources as well as information about the graphics are given.

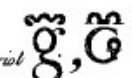

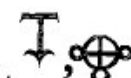

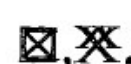

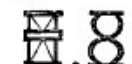

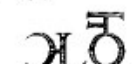

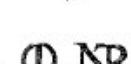

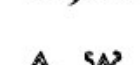

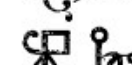

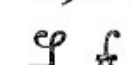

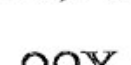

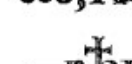

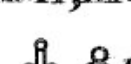

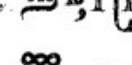

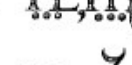

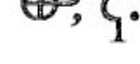

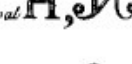

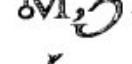

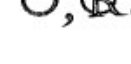

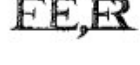

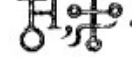

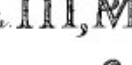

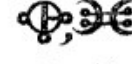

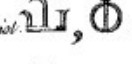

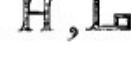

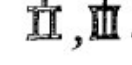

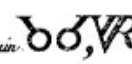

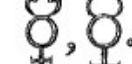

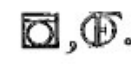

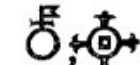

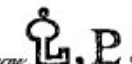

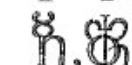

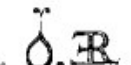

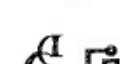

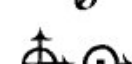

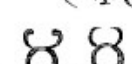

(Submitted by James Kass.)

Following are four plates found in "SIMBOLS.ZIP" from the web site of Rubellus Petrinus, a contemporary alchemist.

This page, <http://www.purplehell.com/riddletools/alchemy.htm>, shows what appear to be modern drawings of many of the same symbols. Quoting from the page, "While the notation method was mostly standardized, styles and symbols varied between alchemists, this page shows the most commonly used ones, with some more recent additions used by alchemists today."
