

JTC1/SC2/WG2 N3584

Proposal for Alchemical Symbols in Unicode

William R. Newman, John A. Walsh, Stacy Kowalczyk,

Wallace E. Hooper, Tamara Lopez

INDIANA UNIVERSITY

March 6, 2009

This proposal envisions the creation and organization of a code block devoted to alchemical symbols. Some alchemical symbols have already been included in existing blocks, especially the Miscellaneous Symbols block (u2600). (See Table 1. Existing Coverage of Alchemy in Unicode.) The idea of organizing a block for alchemical symbols holds clear benefits for historians, chemists, philologists, literary scholars, and their professional colleagues; for a large community interested in alternative knowledge and New Age disciplines; for writers and artists, e.g., in the fantasy genre, developing creative works that deal with themes and history of alchemy; and, potentially, another large community working in computer gaming, graphics, and fonts.

Alchemical symbols were first used by Greek, Syriac, and Egyptian writers around the fifth or sixth century C.E. and were adopted and proliferated by medieval Arabic and European writers. European alchemists, natural philosophers, chemists, and apothecaries developed and used several parallel systems of symbols while retaining many symbols created by Greek, Syriac, and medieval Arabic writers. Alchemical works published in what is best described as a textbook tradition in the seventeenth and eighteenth centuries routinely included tables of symbols that probably served to spread their use. They were made obsolete in learned discourse as alchemy gave way to a chemistry based on controlled experiment and precise measurement, and their mnemonic functions were supplanted by the development of modern chemical nomenclature. Nevertheless, alchemical symbols continue to be used extensively today in scholarly literature, in creative works, in New Age texts, and in the gaming and graphics industries.

The NSF- and NEH-funded Chymistry of Isaac Newton Project at Indiana University, with the help of the Chemical Heritage Foundation in Philadelphia, gathered a collection of seventeenth and eighteenth century synoptic tables as an initial step toward developing a Unicode proposal for alchemical symbols. Examples of those textbook tables are shown in Figure 1, *Explanation of the Chymical Characters* from Nicaise Le Fèvre, *A compleat body of chymistry*, London, 1670, and Figure 2, Basil Valentine, *The Last Will and Testament of Basil Valentine*, 1671. There are many others.

The modern study of the history of alchemy and alchemical symbols was put on a solid footing in the 1880s and 1890s by Marcelin Berthelot in several works but especially *La Chimie au Moyen Âge* (1895). Berthelot listed symbols from the Greek, Syriac and

Arabic writers and discussed their transmission. In 1928, Fritz Lüdy-Tenger published *Alchemistische und chemische Zeichen*, an inventory of alchemical and pharmaceutical symbols and variants that included 3695 symbols in 128 tables (see Figure 3 for a sample table). This inventory was organized morphologically but did not include a cross index or a detailed account of the sources of the symbols. Surprisingly, perhaps, the inventory is not exhaustive. We have encountered a number of symbols in early modern writers that are not present in Lüdy-Tenger's tables. Wolfgang Schneider's *Lexicon alchemistisch-pharmazeutischer Symbole* (1962) covered much the same material as Lüdy-Tenger but organized it semantically and supplemented the lists of symbols with a lexicon and synonymy.

Font resources

Newton made extensive use of these symbols in his own alchemical manuscripts and the Chymistry of Isaac Newton Project has created and expanded an Open Type font, named *Newton*, with all of the symbols he used, to support the online delivery of the alchemical manuscripts through the Indiana University Digital Library Program.

It would require a considerable amount of scholarship and research to identify and organize the entire Lüdy-Tenger and Schneider inventories and such work is certainly outside the scope of the design of the Chymistry of Isaac Newton Project. Nevertheless, to develop this proposal, project staff members created another Open Type font, named *LuedyTenger* that includes all 3695 symbols in the Lüdy-Tenger inventory. (Note that font names are limited to printable ASCII characters 33-126 so we followed the usual convention for rendering German umlauts in English when we named the font.)

After discussions with members of the Unicode Technical Committee that guided the selection of alchemical symbols included in this proposal, project staff created a third font, named *Alchemy Textbook*, which contains all the symbols in the order presented in Tables 1 and 2 below.

We hope that these font resources will enable other interested colleagues and projects to pursue further research and publication.

Basic Strategy

Our basic strategy is to concentrate first on a core group of symbols that were recognized and organized into tables by European writers working in the alchemical textbook tradition approximately 1620–1720. It seems reasonable to expect that future projects, publishers, and authors would want to expand the alchemy Unicode block as scholarship progresses beyond current frontiers in this area. However, the core group of symbols represented in our proposal includes all symbols found in the vast majority of the western alchemical tradition and the alchemical works of major figures such as Newton, Boyle, and Paracelsus.

The early modern alchemical textbook writers were already aware of some of the history of their literature. They recognized the ancient connections made between the planets and naturally occurring ores and metals and carried forward Aristotelian associations with the four elements and vegetative and putrefying processes. Their synoptic symbol tables included most of the Arabic, Syriac, and Greek symbols and further noted the existence and currency of many alternate symbols and variants for the same substances and processes.

Table 1, appended below, lists thirty-six alchemical symbols already present in Unicode. Our Table 2 lists a further 114 symbols that together with those in Table 1 comprise a core group of symbols usually included in the synoptic tables of the textbook tradition and we propose to begin discussion of a possible Unicode Alchemical Symbols block with these 150 symbols.

Possible Future Expansions of the Alchemical Block

The Greek, Syriac, and Arabic alchemical writers composed their texts in non-Latin scripts and used the alchemical symbols in ways that reflect those writing systems. Berthelot tells us, for example, that the Syriac authors carried over the Greek symbols but wrote them horizontally rather than vertically. Our group and collaborators are certainly equipped to assess the use of alchemical symbols in Latin scripts but expanding this preliminary proposal to cover classical and Arabic alchemy would require discussions with friends and colleagues working directly with those traditions. Furthermore, the Unicode Consortium already has standards for Greek, Syriac, and Arabic scripts, and any expansions of the proposed alchemical block to include the earliest texts of the tradition would probably also need to take those standards into account in an integral way.

We have also chosen to limit the coverage of this proposal to 1720. After the groundbreaking work of Boyle, Newton, and their contemporaries at the end of the seventeenth century, “chymical” authors like Geoffroy and Gellert began to reflect on possible underlying affinities and relations between the substances they were investigating experimentally. By 1720, these new chymical authors began to attempt to modify the received set of alchemical symbols to reflect their new ideas and theories. Their elaborate graphical solutions were both ingenious and prolific but ultimately proved to be idiosyncratic and were abandoned as experimental chemistry progressed. Extension of the proposed Unicode alchemical block to include these graphical elaborations will require the use of combining characters and much careful attention to the details of their respective theories. That work is beyond the scope of what we can contribute without effective collaboration from colleagues interested in those particular developments.

Newton’s Own Modified Alchemical Symbols

Authors working after Paracelsus and before Geoffroy tended to use alchemical symbols primarily as simple substitutes for the written words they stood for. It is common in Latin alchemical texts of this period to find the symbols being declined grammatically, e.g. ♁^{ii} ,

antimonii. Some symbols, like those for mercury sublimate, ☿ , ☿ , and ☿ , appear to be composed from the separate symbols for mercury (☿) and sublimation (☿) but this kind of composition is rare before 1720. After 1720, the chymical authors did begin to extensively modify the received symbols in systematic ways to suggest affinities and new taxonomies as they themselves explained. It has to be conceded, however, that in our own time there are few clear ideas about the original semiosis of these symbols or about the continual creation of new symbols between 500 C.E. and 1720 when the alchemical tradition was still productive.

In some notebooks dating from about the 1680s, however, Newton notably did modify a number of basic alchemical symbols to distinguish between purified substances and their ores, and between purified substances and their sublimate. Our project has so far identified twenty characters that Newton modified in this way, almost all of them in his laboratory notebooks, which are presently drawing the attention of historians of science.

Newton's basic practice was to adjoin a small 'o' to the received alchemical symbol to connote the ore of the substance, as in ☿° . To connote the sublimate, he adjoined a small four-bar (or eight-spoked) asterisk, '*', as in ☿^* . The eight-spoked asterisk was a common symbol for sal-ammoniac, likely suggesting the volatility required for the formation of sublimate in retorts. It is interesting to note that when Newton wrote a symbol for sal-ammoniac itself, he always used an inline three-bar sextilis, 'x', another common symbol for sal-ammoniac, rather than the four-bar form he usually used in his sublimate symbols.

We have included sixteen of Newton's twenty ore and sublimate symbols in Table 2. (The other four of twenty symbols may be regarded as minor variants.)

Brief Discussion of Conventions Observed in Tables 1 and 2

Names of the proposed Unicode characters are usually given in English while Latin equivalents are handled as aliases (= lixivium). Alchemical terms in English, however, often are precisely their Latin equivalents and have entered English directly as a result. Obvious examples are aquafortis and aqua regia. We consulted the Oxford English Dictionary whenever we faced this problem: Where the OED uses the Latin term as the lemma/headword, we have retained the Latin as the character name with the OED's spelling. Where the OED has an English term as the lemma/headword, we have named the character accordingly, with a Latin alias, where appropriate. The terminology used here should correspond to the terminology generally used by scholars, writing in English, when referring to these alchemical substances, processes, etc.

Tables 1 and 2 are constructed to adhere to Unicode Code Chart formats. Table 1 lists symbols already present in Unicode but we added explanations (=) we would like to see added to the existing code points. Those are marked in bold.

We have organized the symbols in Table 2 into categories for Substances, Processes, Apparatuses, Time, and Measures, following a suggestion by Andreas Stötzner of the

Deutsche Industrie Norm group which participates in ISO. We have added a further level of organization within the category of Substances for the purposes of this proposal. We start first with the traditional symbols for *Aristotle's elements*: fire, air, water, and earth, and quintessence. Then we add the symbols for *Important solvents*—aqua fortis, aqua regia, aqua vitae, and vinegar—which were basic to refining. Next come symbols for *Sulfur and mercury*, and then symbols for *Salts, vitriols, and niters*, which were so important to Paracelsus. After that we list, in turn, the symbols for the common metals: *Gold; Silver; Copper; Lead; Tin*; and *Antimony and regulus*. Finally we have added a catch-all list of symbols for *Other substances* that includes minerals, organic materials, principles, and *deckname*.

**Appendix:
Record of the Most Important Changes between the
October, 2008, Submission and This Submission**

We have made a number of changes to our previous version of the alchemy proposal based on our teleconference discussions with the Unicode Technical Committee (UTC) on November 3, 2008. The following bulleted list attempts to cover the main points:

- Removed four of the twenty symbols listed in “Table 3. Newton’s Ore and Sublimate Symbols” after reviewing all cases in the Newton manuscripts at the suggestion of the UTC. The four removed symbols appear to be variants or alternate glyphs rather than semantically distinct symbols. Their removal further alleviates the need for composite characters.
- Removed “Table 3. Newton’s Ore and Sublimation Symbols” from the proposal and all remaining ore and sublimate characters have been moved into “Table 2. Preliminary Unicode Alchemical Symbol Table” because there is no longer any need to treat them separately as composite characters.
- Introduced a second layer of categorization in the *Substances* section of Table 2 (Fresh query: Is this additional layer of hierarchy supported by Unicode’s documentation practices or should *Substances* be replaced by these twelve headings?):
 - (1) Symbols for Aristotelian elements;
 - (2) Symbols for Important solvents;
 - (3) Symbols for Sulfur and Mercury;
 - (4) Symbols for Salt, Vitriol, and Niter;
 - (5) Symbols for Gold;
 - (6) Symbols for Silver;
 - (7) Symbols for Iron, Iron Ore, and Derivatives;
 - (8) Symbols for Copper, Copper Ore, and Derivatives;
 - (9) Symbols for Tin and Tin Ore;
 - (10) Symbols for Lead and Lead Ore;
 - (11) Symbols for Antimony, Antimony Ore and Derivatives and Regulus;
 - (12) Symbols for Other Substances.
- Prefixed the phrase “ALCHEMICAL SYMBOL FOR” to all symbols in Table 2 at the suggestion of the UTC.

- Moved semantically distinct symbols out of “Table 1. Existing Coverage...” and moved them into Table 2 as follows.
 - XX02 ALCHEMICAL SYMBOL FOR FIRE distinguished from U+25B3 WHITE UP-POINTING TRIANGLE
 - XX04 ALCHEMICAL SYMBOL FOR WATER distinguished from U+25BD WHITE DOWN-POINTING TRIANGLE
 - XX0A ALCHEMICAL SYMBOL FOR VINEGAR distinguished from U+002B PLUS
 - XX14 ALCHEMICAL SYMBOL FOR SALT distinguished from U+2296 CIRCLED MINUS
 - XX15 ALCHEMICAL SYMBOL FOR NITER distinguished from U+29B6 CIRCLED VERTICAL BAR
-  Misidentified in October’s Table 3 as SALT OF ANTIMONY 2. Corrected in current draft as XX2E ALCHEMICAL SYMBOL FOR SUBLIMATE OF SALT OF ANTIMONY
-  (Oct. XX57 SUBLIMATE OF SALT OF COPPER 2) Removed from proposal, based on reexamination of Add. Ms. 3975 by project staff.
-  (Oct. XX59 SUBLIMATE) moved from Table 2 to Table 1 where it is identified as U+260A ASCENDING NODE with an added identification of “=alchemical symbol for sublimate.” The October reference to arsenic has been dropped on review of alchemical textbook tables.
-  (Oct. XX5E PURIFY) moved from Table 2 to Table 1 where it is identified as U+260B DESCENDING NODE with an added identification of “=alchemical symbol for purify,” and a cross-reference to a distinct symbol also commonly used for ‘purify’, “→ XX63  ALCHEMICAL SYMBOL FOR PURIFY.”
-  (Oct. XX06 CIRCLED CROSS) has been re-identified as XX56 ALCHEMICAL SYMBOL FOR VERDIGREASE. We added the identification “=early astronomical symbol for earth,” and a cross-reference to U+2295 CIRCLED PLUS. In Table 1, we add a cross-reference to XX56 at U+2641 EARTH.
-  (Oct. XX40 ARSENIC 2) removed altogether as a close variant of XX3A ALCHEMICAL SYMBOL FOR ARSENIC.
-  (Oct. XX23 CROCUS OF IRON) moved from Table 2 to Table 1 where it is identified as U+26A6 MALE WITH STROKE/TRANSGENDERED SEXUALITY with an added identification of “=alchemical symbol for iron or crocus of iron.”
- Added to Table 2 the common symbols XX1A ALCHEMICAL SYMBOL FOR GOLD and XX1B ALCHEMICAL SYMBOL FOR SILVER.
- CADUCEUS: Added cross-reference to U+2625.
- Corrected spellings from seventeenth-century forms to current, e.g., *verdigrease* to *verdigris*, *loadstone* to *lodestone*.

XX4B		ALCHEMICAL SYMBOL FOR POWDER = pulvis
XX4C		ALCHEMICAL SYMBOL FOR CALX = calcinare = oxide residue, calcium oxide
XX4D		ALCHEMICAL SYMBOL FOR TUTTY = tutia, crude zinc oxide sublimate = aes viride
XX4E		ALCHEMICAL SYMBOL FOR CAPUT MORTUUM = worthless residue of sublimation or distillation
XX4F		ALCHEMICAL SYMBOL FOR SCEPTER OF JOVE
XX50		ALCHEMICAL SYMBOL FOR CADUCEUS → 2624 caduceus
XX51		ALCHEMICAL SYMBOL FOR TRIDENT
XX52		ALCHEMICAL SYMBOL FOR STARRED TRIDENT
XX53		ALCHEMICAL SYMBOL FOR LODESTONE = magnes
XX54		ALCHEMICAL SYMBOL FOR SOAP → 25CA lozenge
XX55		ALCHEMICAL SYMBOL FOR URINE → 22A1 squared dot operator
XX56		ALCHEMICAL SYMBOL FOR HORSE DUNG = fimus equinus
XX57		ALCHEMICAL SYMBOL FOR ASHES = cineres
XX58		ALCHEMICAL SYMBOL FOR POT ASHES = cineres clavellati, alumen
XX59		ALCHEMICAL SYMBOL FOR BRICK

Unicode	Symbol	Description
XX5A		ALCHEMICAL SYMBOL FOR POWDERED BRICK = later cibratus, farina laterum
XX5B		ALCHEMICAL SYMBOL FOR AMALGAM
XX5C		ALCHEMICAL SYMBOL FOR STRATUM SUPER STRATUM
XX5D		ALCHEMICAL SYMBOL FOR STRATUM SUPER STRATUM-2
Processes		
XX5E		ALCHEMICAL SYMBOL FOR SUBLIMATION → 260A Ω ascending node (alchemical symbol for sublimate)
XX5F		ALCHEMICAL SYMBOL FOR PRECIPITATE
XX60		ALCHEMICAL SYMBOL FOR DISTILL = sublimate
XX61		ALCHEMICAL SYMBOL FOR DISSOLVE
XX62		ALCHEMICAL SYMBOL FOR DISSOLVE-2 = water, aqua
XX63		ALCHEMICAL SYMBOL FOR PURIFY → 260B ∅ descending node (alchemical symbol for purify)
XX64		ALCHEMICAL SYMBOL FOR PUTREFACTION
Apparatuses		
XX65		ALCHEMICAL SYMBOL FOR CRUCIBLE = tigellum → XX0A alchemical symbol for vinegar, crucible
XX66		ALCHEMICAL SYMBOL FOR CRUCIBLE-2
XX67		ALCHEMICAL SYMBOL FOR CRUCIBLE-3
XX68		ALCHEMICAL SYMBOL FOR CRUCIBLE-4
XX69		ALCHEMICAL SYMBOL FOR CRUCIBLE-5
XX6A		ALCHEMICAL SYMBOL FOR ALEMBIC
XX6B		ALCHEMICAL SYMBOL FOR BATH OF MARY = balneum mariae
XX6C		ALCHEMICAL SYMBOL FOR BATH OF VAPORS = balneum vaporis
XX6D		ALCHEMICAL SYMBOL FOR RETORT

Time

XX6E		ALCHEMICAL SYMBOL FOR HOUR → 231B ⌘ hourglass (alchemical symbol for hour)
XX6F		ALCHEMICAL SYMBOL FOR NIGHT
XX70		ALCHEMICAL SYMBOL FOR DAY-NIGHT
XX71		ALCHEMICAL SYMBOL FOR MONTH =mensis → 22A0 squared times

Measures

XX72		ALCHEMICAL SYMBOL FOR HALF DRAM = drachma semis
XX73		ALCHEMICAL SYMBOL FOR HALF OUNCE = uncia semis

Character Properties

```

XX00;ALCHEMICAL SYMBOL FOR QUINTESENCE;So;0;ON;;;;;N;;;;;
XX01;ALCHEMICAL SYMBOL FOR AIR;So;0;ON;;;;;N;;;;;
XX02;ALCHEMICAL SYMBOL FOR FIRE;So;0;ON;;;;;N;;;;;
XX03;ALCHEMICAL SYMBOL FOR EARTH;So;0;ON;;;;;N;;;;;
XX04;ALCHEMICAL SYMBOL FOR WATER;So;0;ON;;;;;N;;;;;
XX05;ALCHEMICAL SYMBOL FOR AQUAFORTIS;So;0;ON;;;;;N;;;;;
XX06;ALCHEMICAL SYMBOL FOR AQUA REGIA;So;0;ON;;;;;N;;;;;
XX07;ALCHEMICAL SYMBOL FOR AQUA REGIA-2;So;0;ON;;;;;N;;;;;
XX08;ALCHEMICAL SYMBOL FOR AQUA-VITAE;So;0;ON;;;;;N;;;;;
XX09;ALCHEMICAL SYMBOL FOR AQUA-VITAE-2;So;0;ON;;;;;N;;;;;
XX0A;ALCHEMICAL SYMBOL FOR VINEGAR;So;0;ON;;;;;N;;;;;
XX0B;ALCHEMICAL SYMBOL FOR VINEGAR-2;So;0;ON;;;;;N;;;;;
XX0C;ALCHEMICAL SYMBOL FOR VINEGAR-3;So;0;ON;;;;;N;;;;;
XX0D;ALCHEMICAL SYMBOL FOR SULFUR;So;0;ON;;;;;N;;;;;
XX0E;ALCHEMICAL SYMBOL FOR PHILOSOPHERS SULFUR;So;0;ON;;;;;N;;;;;
XX0F;ALCHEMICAL SYMBOL FOR BLACK SULFUR;So;0;ON;;;;;N;;;;;
XX10;ALCHEMICAL SYMBOL FOR MERCURY SUBLIMATE;So;0;ON;;;;;N;;;;;
XX11;ALCHEMICAL SYMBOL FOR MERCURY SUBLIMATE-2;So;0;ON;;;;;N;;;;;
XX12;ALCHEMICAL SYMBOL FOR MERCURY SUBLIMATE-3;So;0;ON;;;;;N;;;;;
XX13;ALCHEMICAL SYMBOL FOR CINNABAR;So;0;ON;;;;;N;;;;;
XX14;ALCHEMICAL SYMBOL FOR SALT;So;0;ON;;;;;N;;;;;
XX15;ALCHEMICAL SYMBOL FOR NITER;So;0;ON;;;;;N;;;;;
XX16;ALCHEMICAL SYMBOL FOR VITRIOL;So;0;ON;;;;;N;;;;;
XX17;ALCHEMICAL SYMBOL FOR VITRIOL-2;So;0;ON;;;;;N;;;;;
XX18;ALCHEMICAL SYMBOL FOR ROCK SALT;So;0;ON;;;;;N;;;;;
XX19;ALCHEMICAL SYMBOL FOR ROCK SALT-2;So;0;ON;;;;;N;;;;;
XX1A;ALCHEMICAL SYMBOL FOR GOLD;So;0;ON;;;;;N;;;;;
XX1B;ALCHEMICAL SYMBOL FOR SILVER;So;0;ON;;;;;N;;;;;
XX1C;ALCHEMICAL SYMBOL FOR IRON ORE;So;0;ON;;;;;N;;;;;
XX1D;ALCHEMICAL SYMBOL FOR IRON ORE-2;So;0;ON;;;;;N;;;;;
XX1E;ALCHEMICAL SYMBOL FOR CROCUS OF IRON;So;0;ON;;;;;N;;;;;
XX1F;ALCHEMICAL SYMBOL FOR REGULUS OF IRON;So;0;ON;;;;;N;;;;;
XX20;ALCHEMICAL SYMBOL FOR COPPER ORE;So;0;ON;;;;;N;;;;;
XX21;ALCHEMICAL SYMBOL FOR IRON-COPPER ORE;So;0;ON;;;;;N;;;;;

```

ISO/IEC JTC 1/SC 2/WG 2
PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS
FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC 10646¹PT

Please fill all the sections A, B and C below.
Please read Principles and Procedures Document (P & P) from
HTU<http://www.dkuug.dk/JTC1/SC2/WG2/docs/principles.html> UTH for guidelines and details before
filling this form.
Please ensure you are using the latest Form from
HTU<http://www.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html> UTH.
See also HTU<http://www.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html> UTH for latest *Roadmaps*.

A. Administrative

1. Title: Alchemical Symbols

2. Requester's name: W.R. Newman, J.A. Walsh, S. Kowalczyk, W. Hooper, T. Lopez

3. Requester type (Member body/Liaison/Individual contribution): Individual contribution

4. Submission date: February 27, 2009

5. Requester's reference (if applicable): _____

6. Choose one of the following:

This is a complete proposal: Yes

(or) More information will be provided later: _____

B. Technical – General

1. Choose one of the following:

a. This proposal is for a new script (set of characters): Yes
Proposed name of script: Alchemical symbols

b. The proposal is for addition of character(s) to an existing block:
Name of the existing block: _____

2. Number of characters in proposal: 114

3. Proposed category (select one from below - see section 2.2 of P&P document):
A-Contemporary B.1-Specialized (small collection) B.2-Specialized (large collection)
C-Major extinct D-Attested extinct E-Minor extinct
F-Archaic Hieroglyphic or Ideographic G-Obscure or questionable usage symbols

4. Is a repertoire including character names provided? Yes

a. If YES, are the names in accordance with the "character naming guidelines"
in Annex L of P&P document? Yes

b. Are the character shapes attached in a legible form suitable for review? Yes

5. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard? Requesters

If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used: Available on request, www.chymistry.org. Created in FontLab Studio, Adobe Illustrator.

6. References:

a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? Yes

b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached? Yes

7. Special encoding issues:
Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)? N/A

8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see <http://www.unicode.org/Public/UNIDATA/UCD.html> and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

¹ Form number: N3152-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05)

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? If YES explain	No
2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? If YES, with whom? If YES, available relevant documents:	Yes <i>Chemical Heritage Foundation</i>
3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? Reference:	Yes
4. The context of use for the proposed characters (type of use; common or rare) Reference:	<i>Publications</i>
5. Are the proposed characters in current use by the user community? If YES, where? Reference:	Yes <i>www.chymistry.org</i>
6. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP? If YES, is a rationale provided? If YES, reference:	
7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?	Yes
8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? If YES, is a rationale for its inclusion provided? If YES, reference:	No
9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters? If YES, is a rationale for its inclusion provided? If YES, reference:	No
10. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character? If YES, is a rationale for its inclusion provided? If YES, reference:	No
11. Does the proposal include use of combining characters and/or use of composite sequences? If YES, is a rationale for such use provided? If YES, reference: Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided? If YES, reference:	No
12. Does the proposal contain characters with any special properties such as control function or similar semantics? If YES, describe in detail (include attachment if necessary)	No
13. Does the proposal contain any Ideographic compatibility character(s)? If YES, is the equivalent corresponding unified ideographic character(s) identified? If YES, reference:	No
