Doc Type: Working Group Document
Title: Proposal for a revised Tangut character set for encoding in the SMP of the UCS
Appendix A
Source: Michael Everson, Nathan Hill, Guillaume Jacques, Andrew West, Viacheslav Zaytsev
Status: Individual Contribution
Action: For consideration by JTC1/SC2/WG2 and UTC
Date: 2009-04-08

The characters assigned to each Tangut radical are ordered by residual stroke count and stroke order using the same principles used for ordering radicals. The resultant ordering of the proposed set of 6,221 characters is shown in this document.

Note that the ideographic description sequences in this Appendix show the minimal possible decomposition of characters into their component parts using an extension to the set of radicals proposed in N3495 (Proposal to encode Tangut Radicals and CJK Strokes in the UCS). By applying the IDS decompositions of this set of radicals it would be possible to generate maximally decomposed IDS sequences for the proposed set of Tangut characters.

Appendix A : Tangut Character Ordering
