Title: Review of Jurchen Proposal (Documents N3628 and N3688)
Source: United Kingdom NB
Status: National Body Contribution
Date: 2009-10-21

1. Background

This document is a preliminary review of the China NB proposal to encode the Jurchen script, N3628 "Proposal to Encode the Jurchen Characters in UCS", as supplemented by N3688 "Additional Information for the Proposal on Jurchen Characters". In light of the various issues on character repertoire, glyph shapes and character names raised in the current document, we believe that a revised proposal should be made available for further review before it is considered for addition to an amendment.

2. Character Repertoire

We agree that it is a good idea to base the Jurchen character repertoire on Jin Qicong's *Jurchen Dictionary* (hereafter abbreviated *JQC*), as it is the standard modern dictionary of Jurchen, and very widely used by Jurchen scholars. However, this dictionary is hand-written, and has many duplicate entries and glyph discrepancies, so the characters required to be encoded need to be carefully selected and checked. It is not sufficient to uncritically encode all the characters listed in the index, as they include duplicate characters and glyph errors.

We also agree that the character order should follow the order of characters given in Jin Qicong's dictionary (i.e. in radical/stroke order). However, in order to be able to uniquely identify the particular entry in Jin Qicong's dictionary that each proposed character corresponds to, and to help ensure that characters are correctly ordered, it is not sufficient to merely provide the page number that the character occurs on (as listed in N3688), but also to indicate the relative position on the page that the entry for each character occurs. We therefore provide Page/Position references for each character in Appendix A of this document, and these are referenced below in discussion of Jurchen characters (e.g. *JQC* 087-07 refers to the seventh entry on page 87 of Jin Qicong's dictionary, viz. X-0425 𐰆𐰪).

3. Character Variants

One potential issue with using Jin Qicong's dictionary as the primary source for a character encoding standard is the fact that the dictionary includes a high proportion of entries for simple glyph variants of other characters. Of the 1,256 characters in the dictionary (excluding duplicates), at least 391 characters are glyph variants, accounting for 31% of the total characters. Moreover, most of the nearly one hundred Jurchen characters with unknown readings in the dictionary are probably unidentified variants of other characters, so in reality it is fair to say that more than a third of the characters in Jin Qicong's dictionary are glyph variants. To put this in perspective, in the Tangut proposal, N3577, fewer than 300 of the proposed 6,221 characters are glyph variants (i.e. less than 5% of the proposed repertoire).

Furthermore, whereas all of the Tangut glyph variants proposed in N3577 are structurally distinct (i.e. can be described with a unique IDS sequence), very many of the Jurchen glyph variants have the same component structure, and only vary in the particular shape, size or orientation of one or more strokes. In many cases the difference between two or more variants of the same character is small and probably insignificant, often apparently reflecting the particular handwriting style of the original manuscript scribe or the modern editor. The following are some extreme examples of pairs of characters that are given separate entries in the dictionary based on very minor glyph differences:

- 夭 (X-0228) ≠ 𐰇 (X-0229) [realization of the stroke forming the right leg]
- 土 (X-0310) ≠ 𐰇 (X-0311) [position of the dot]
- 𐰇 (X-0424) ≠ 𐰇 (X-0425) [realization of the diagonal stroke on the right]
- 𐰇 (X-0571) ≠ 𐰇 (X-0572) [joining or not joining of the two diagonal strokes to the body]
- 𐰇 (X-0609) ≠ 𐰇 (X-0610) [presence or absence of a hook at the bottom of the central vertical stroke]
- 𐰇 (X-0966) ≠ 𐰇 (X-0965) [shape of the open box in the middle of the character]
- 𐰇 (X-1288) ≠ 𐰇 (X-1289) [presence or absence of a flick on the dot stroke on the top left]

On the other hand, many variants are quite distinct from each other, and not obviously the same character. For example *JQC* 137-04 𐰇 has the following distinct glyph variants: 𐰇, 𐰇, 𐰇 and 𐰇.

There are also some discrepancies between various glyph forms in the dictionary. For example, *JQC* 043-06 gives 𐰇 as the glyph form used on the *Jinshi Bei* inscription, but the main entry for the character 𐰇 (137-04) gives a slightly different (and not proposed for encoding) glyph form for the character used on the *Jinshi Bei* inscription.

Another potential problem is that not all distinct glyph forms used in the dictionary have a head entry or index entry, and so have not been proposed for encoding. For example, the 1st/2nd and 4th variants of *JQC* 295-01 𐰇 are quite distinct from the head entry form of the character, but as they are not given separate entries in the dictionary (as most glyph variants are), they are not proposed for encoding.

We believe that as an historical script that is almost entirely of scholarly interest only, it is appropriate to encode all characters in Jin Qicong's dictionary as separate encoded characters, so that scholars are able to faithfully represent the contents of the dictionary, and are able to freely discuss and use glyph variants as they need. However, we also feel that the issue of Jurchen character variants is complex, and needs to be addressed in more detail in the encoding proposal.

4. Character Names

Neither N3628 or N3688 propose character names, but suggest that character names should be created algorithmically as is the case for CJK ideographs. We believe that it would be much better to provide individual names for characters based on their reconstructed readings (where available). The majority of characters in Jin Qicong's dictionary are derived from one or more manuscript recensions of the Jurchen section of the "Chinese-Barbarian Glossaries" (*Hua-Yi Yiyu* 華夷譯語) compiled during the Ming dynasty by the Bureau of Translators. As this provides a pronunciation gloss in Chinese characters for each Jurchen character, modern scholars have been able to reconstruct the pronunciation of most Jurchen characters, and consequently most characters in Jin Qicong's dictionary can be given names that reflect their reconstructed readings. We propose the following character naming scheme:

- i. Characters names have the format "JURCHEN CHARACTER X", where X is the short name given in Appendix B. We propose using the neutral term "CHARACTER" as Jurchen characters are neither letters, ideographs nor syllables.
- ii. Character names are provisionally based on Jin Guangping's reconstructed reading given in Jin Qicong's dictionary (taken from column 7 of the table in N3688), applying the following substitutions for phonetic letters. However, there are many apparent errors in Jin Guangping's reconstructions (for example *giyen*, *kiye*, *tanngu*, *çien/çien*), and we would prefer to use Daniel Kane's 1989 reconstructions as the basis for character names, as Kane's reconstructions are less controversial than those of Jin Guangping.

- $\varepsilon \Rightarrow ee$
- $\varnothing \Rightarrow ae$
- $\ddot{i} \Rightarrow ii$
- $\mathcal{d} \Rightarrow dz$
- $\mathcal{d} \Rightarrow dzh$
- $\mathcal{d} \Rightarrow dzh$
- $\mathcal{c} \Rightarrow c$
- $f \Rightarrow sh$
- $\mathcal{t} \Rightarrow tsh$
- $\mathcal{t} \Rightarrow tsh$
- $\eta \Rightarrow ng$
- $g \Rightarrow g$

Note that the pairs *ɕ/ɕ̥* and *tʃ/tʃ̥* are phonemically the same, and so can be translated to the same ASCII sequence ("dzh" and "tsh" respectively) without ambiguity.

iii. If a character has more than one reconstructed reading (e.g. JQC 145-02 𐰚, which Jin Guangping reconstructs as *ŋi*, *ŋgi*, *gi*), then only the first reconstructed reading is used to construct the character name.

iv. Where two non-variant characters have the same reconstructed reading, then they are differentiated by a numeric suffix, e.g. JURCHEN CHARACTER FEI-1 and JURCHEN CHARACTER FEI-2. The suffix reflects the relative order in the dictionary that the main entry for each character occurs.

v. Variant characters are distinguished by an alphabetical suffix, either by itself (e.g. JURCHEN CHARACTER ABXA-A and JURCHEN CHARACTER ABXA-B) or in combination with a numeric suffix (e.g. JURCHEN CHARACTER ATSHII-1A and JURCHEN CHARACTER ATSHII-1B). For characters with more than one glyph form, the head character for the main dictionary entry (i.e. the entry with Source, Reading, Meaning and Examples) is suffixed -A, and the other characters are suffixed -B onwards, approximately according to the order of variants given after the head character in the main entry. Where there are duplicate main entries with different variant-form head characters, the head character for first main entry in the dictionary is suffixed -A, and the head character for the next main entry is suffixed -B.

vi. Where a character has no reconstructed reading then we provisionally suggest using the identifier UNKNOWN plus a numeric suffix. However, such characters could potentially be named on the basis of the primary source in which they are attested, although in some cases such an approach would be problematic.

vii. Where a character name with an alphabetic suffix would conflict with another character name with no suffix if the hyphen-minus sign were ignored, then a redundant numerical suffix -1 is added to the character with no suffix in order to force a unique name according to Rule 4 of the Character Naming Guidelines. There are only two cases where this applies: SHIIRA is modified to SHIIRA-1 to avoid conflict with SHIIR-A; and ADIA is modified to ADIA-1 to avoid conflict with ADI-A.

Based on these principles, we provisionally propose using the character names given in Appendix B of this document, although we are currently investigating the possibility of basing the names on Kane's 1989 reconstructions instead of Jin Guangping's reconstructions.

5. Character Ordering

Two following characters proposed in N3688 are not ordered correctly.

X-0316 𐰚 (JQC 065-02) should be reordered after X-0326 𐰚 (JQC 065-01)

X-0256 𐰚 (JQC 052-02) and X-0257 𐰚 (JQC 052-01) are the wrong way round, and should be swapped.

6. Duplicate Characters

Jin Qicong's dictionary includes a number of duplicate entries for the same character (not glyph variants of the same character, but exactly the same character, with the same primary source or sources). N3628 and N3688 include all characters in the dictionary, even when they are duplicate characters with the same glyph form. Any such duplicates need to be removed from the encoding. We have identified the following duplicates; in each case the second character should be removed.

1st Character			2nd Character			Notes
003-04	𠂇	X-0009	058-03	𠂇	X-0287	
004-03	𠂇	X-0013	025-01	𠂇	X-0121	
005-02	𠂇	X-0018	058-06	𠂇	X-0290	
005-03	𠂇	X-0019	059-01	𠂇	X-0291	
009-01	𠂇	X-0036	061-02	𠂇	X-0305	in the dictionary both characters are written 𠂇
013-05	𠂇	X-0065	170-04	𠂇	X-0776	in the dictionary both characters are written 𠂇
014-03	𠂇	X-0071	061-04	𠂇	X-0307	
022-05	𠂇	X-0113	051-02	𠂇	X-0251	font glyphs are slightly different, but no discernable difference in glyph shape in the dictionary
025-02	𠂇	X-0122	180-04	𠂇	X-0818	glyph difference is insignificant
026-01	𠂇	X-0124	180-05	𠂇	X-0819	glyph difference is insignificant
041-04	𠂇	X-0193	142-02	𠂇	X-0654	
074-03	𠂇	X-0359	184-01	𠂇	X-0843	
081-03	𠂇	X-0388	112-03	𠂇	X-0534	
087-08	𠂇	X-0426	086-01	𠂇	X-0415	in the dictionary both characters are written 𠂇
091-02	𠂇	X-0446	020-01	𠂇	X-0099	
104-06	𠂇	X-0505	181-05	𠂇	X-0825	
151-05	𠂇	X-0687	193-03	𠂇	X-0888	
190-04	𠂇	X-0877	294-04	𠂇	X-1347	
198-02	𠂇	X-0909	175-03	𠂇	X-0797	in the dictionary both characters are written 𠂇
201-01	𠂇	X-0923	078-03	𠂇	X-0372	
223-02	𠂇	X-1041	274-03	𠂇	X-1260	

There is no discernable difference in glyph shape between the following pairs of variants, and the second character should be removed:

1st Character			2nd Character		
083-04	𠂇	X-0397	217-01	𠂇	X-1010
090-01	𠂈	X-0443	244-02	𠂈	X-1126
110-03	𠂉	X-0525	265-09	𠂉	X-1216

In addition, X-0231/X-0232 𠂊/𠂊 correspond to the same dictionary entry (*JQC* 048-03), but as it is a variant form of two different characters (*JQC* 051-01 and *JQC* 048-02) it has two entries in the index, and both characters have been proposed for encoding. In N3628, X-0232 was given a slightly different glyph form compared with X-0231, and this did not correspond to any head character or index entry; but in N3688 X-0231 and X-0232 both have the same glyph shape, which correctly reflects the same glyph shape of the two index entries. As X-0231 and X-0232 have the same glyph and refer to the same entry in *JQC*, X-0232 should be removed.

However, there are several cases of duplicate entries in the dictionary where the character is incorrectly written with a significantly different glyph in each entry. In these cases, although the character is from a single source and so should only have a single glyph shape, we think it necessary to encode both glyph forms used by Jin Qicong so that scholars can correctly refer to each dictionary entry.

1st Character			2nd Character			Notes
206-01	𠂊	X-0947	214-06	𠂊	X-0991	
149-01	𠂊	X-0677	180-03	𠂊	X-0817	4 strokes as opposed to 3 strokes
084-08	𠂊	X-0406	182-01	𠂊	X-0829	although the font glyphs are identical, in the dictionary 084-08 is written with the first stroke bending inwards (Radical 17), and 182-01 with the first stroke bending outwards (Radical 31)
103-04	𠂊	X-0497	276-08	𠂊	X-1274	7 strokes as opposed to 8 strokes

Finally, X-0383 𠂊 does not correspond to any head character or index entry. It is probably a mistake for *JQC* 080-06 (X-0384 𠂊), and should be removed.

7. Radicals

JQC has 50 radicals, but N3628 and N3688 only list 49 radicals, as they subdivide Radical 30 into "Rx-030 丿" and "Rx-030 丿 (big)". However, these should be two separate radicals (丿 and 丿 respectively). Rx-030 (big) should be renumbered Rx-031, and RX-031 through RX-049 renumbered and RX-032 through RX-050.

In addition, the glyphs for the following radicals do not exactly match the glyph form given in *JQC*, and should be improved:

- Rx-021 𠂇 [although the glyph is the same as shown on *JQC* page 6, on the actual characters with this radical (𠂇 𠂇 𠂇) the side strokes do not cross the vertical strokes, so the radical glyph should be modified to reflect its actual shape]
- Rx-022 𠂈 [the side strokes should be angled, and not touch the vertical strokes (𠂈 𠂈 𠂈)]

8. Glyph Corrections

The glyphs for the following characters do not exactly match the glyph form given in *JQC*, and should be improved. It is especially important that where two characters have very similar glyphs, each glyph is made as distinguishable from the other as possible.

- X-0061 𠂇 (*JQC* 013-01)
- X-0074 𠂇 (*JQC* 014-06) [left leg needs modifying to more clearly distinguish it from X-0057 𠂇]
- X-0098 𠂇 (*JQC* 019-05)
- X-0111 𠂇 (*JQC* 022-03)
- X-0167 𠂇 (*JQC* 033-06)
- X-0193 𠂇 (*JQC* 041-04) [should be the same as X-0654 𠂇]
- X-0202 𠂇 (*JQC* 043-02) [should be like 𠂇 with a dot]
- X-0281 𠂇 (*JQC* 057-01) [first stroke should be a horizontal stroke, like X-0282 𠂇]
- X-0305 𠂇 (*JQC* 061-02) [should be the same as X-0036 𠂇]
- X-0308 𠂇 (*JQC* 061-05)
- X-0376 𠂇 (*JQC* 079-02)
- X-0388 𠂇 (*JQC* 081-03) [should be the same as X-0534 𠂇]
- X-0406 𠂇 (*JQC* 084-08) [first stroke should bend inwards]
- X-0408 𠂇 (*JQC* 085-01) [first stroke should bend inwards]
- X-0409 𠂇 (*JQC* 085-02) [first stroke should bend inwards, in contrast with the first stroke of *JQC* 185-05 𠂇, which bends outwards]
- X-0410 𠂇 (*JQC* 085-03) [first stroke should bend inwards]
- X-0415 𠂇 (*JQC* 086-01) [should be the same as X-0426 𠂇]
- X-0460 𠂇 (*JQC* 094-02) [middle vertical stroke should extend up beyond the top horizontal stroke]

- X-0651 𠂇 (JQC 141-04) [horizontal first stroke, to more clearly distinguish it from X-0652 𠂈]
- X-0653 𠂉 (JQC 142-01) [left leg needs modifying to more clearly distinguish it from X-0651 𠂇 and X-0652 𠂈]
- X-0815 𠂊 (JQC 180-01) [final stroke should be horizontal, not sloping]
- X-0847 𠂋 (JQC 185-03) [should be more like 𠂌]
- X-0848 𠂍 (JQC 185-04) [fourth stroke should slant down to the start of the last stroke]
- X-0860 𠂎 (JQC 187-05) [top middle stroke should be a dot]
- X-0873 𠂏 (JQC 189-07)
- X-0885 𠂐 (JQC 192-03)
- X-0959 𠂑 (JQC 208-05) [make third stroke extend further beyond the start of the last stroke to more clearly distinguish it from X-0958 𠂒]
- X-1032 𠂓 (JQC 220-02) [should be seven strokes in total, with the 3rd and 4th stroke made into a single stroke]
- X-1169 𠂔 (JQC 255-05) [upper part of the character should extend further down, with the final stroke at a lower angle]
- X-1207 𠂕 (JQC 264-02) [horizontal stroke should not extend left of the leftmost stroke]
- X-1241 𠂖 (JQC 271-01) [first stroke should be angled to the right]
- X-1242 𠂗 (JQC 271-02) [first stroke should be angled to the right]
- X-1274 𠂘 (JQC 276-08) [dot is in the wrong position]
- X-1289 𠂙 (JQC 282-01) [accentuate the flick of the first stroke to more clearly differentiate it from X-1288 𠂚]

Note that this is a provisional list of glyph corrections, and that a more detailed review is likely to find further examples of glyphs that need improving.

Appendix A : Table of Characters in Dictionary Order

In the "Notes" column the following symbols are used:

- = cross-references to a duplicate entry
- ~ cross-references to a variant of this character (only included in the main entry for the character, i.e. a character name ending with "A")
- ⇒ cross-references to the main entry for the character (indicates that this is a variant form of the referenced character)

Characters with an incorrect or suboptimal glyph are marked with an asterisk.

Radical	Strokes	Entry	Character	Reference	Notes	Reading	Short Name
