Doc. Type: Input to ISO/IEC 10646:2012
Title: Updated proposal to add Wingdings and Webdings Symbols
Source: Unicode (authored by Michel Suignard)
Project: JTC1 02.10646
Status: For review by UTC and WG2
Date: 2011-09-23
Distribution: WG2, UTC
Reference: Replaces L2/11-149, L2/11-196(WG2 N4022), L2/11-247 (WG2 N4115) Medium:

The following document is a proposal for adding into Unicode/ISO 10646 the repertoire of four popular symbol sets which is not yet encoded, these symbols sets are:

- Webdings
- Wingdings
- Wingdings 2
- Wingdings 3

A large part of the repertoire (referenced under the name 'Wingdings' in the rest of this document): 504 characters are already part of the current ballot for Amd1.2 to the third edition of ISO/IEC 10646 and are documented as such in this document.
(Note that is this 2 less characters than mentioned by WG2 N4115, because two characters were found to be already encoded and were removed from the ballot document).

This document addresses two major topics:

- Reunification of 10 out of the 504 characters proposed in the ballot.
- Encoding decisions for the Webdings characters for which further study was deemed necessary. As a result, some characters were unified and 113 new characters are proposed for additions.

These results in 504-10+113= 607 characters being proposed. This is slightly less than the 640 characters proposed in WG2 N4022 (L2/11-196) because more characters were unified. Only one character (now proposed at 2BF9) was dis-unified compared to N4022.

These symbols have been used in text in major system platforms such as Microsoft Windows and Mac OS for many years. The original Wingdings fonts first appeared in 1992 in Windows 3.1 and have been expanded in
following versions of Windows to the four fonts we know today. Wingdings and Webdings have also appeared in early version of Mac OS such as version 9 (1999) but typically as an optional install or related to some application install. However, recent versions after 10.5 (Leopard) show these 4 fonts as being part of the essential set. In total, as of today, the number of computers where these fonts are available to users and applications is in the hundreds of millions. As such, symbols from these fonts can be found in an extremely large number of documents.

Unfortunately, these symbols have been available to application through either Unicode Private Use Area (U+F020-U+F0FF) or special menu command (like Insert Symbols in Microsoft Word). This is not optimal for interchange, and it would be preferable to dedicate actual encoding values for these symbols. It would also make them searchable, and offer a migration mechanism for applications and system which want to preserve their use of these symbols while using an encoding compatible with general purpose usage. It would also make them fully interoperable and searchable among all platforms and remove a major caveat for use in web applications. Finally, adding them would complement the work that was recently done for the Japanese ARIB set and the Emoji set. Major software vendors have expressed their willingness to adopt the new encodings as soon as they are adopted.

Any proposal to encode the Webdings/Wingdings set has to address peculiarities of that set:

- Because the sets are installed and used in hundreds of millions of computing devices, unification with existing similar but different glyphs is difficult. In some cases it may be possible to change the current encoded glyph. In others, when the encoded glyph has also a strong presence (such as the Dingbats collection), it is important to leave the current encoded glyph unchanged.
- The characters from the Webdings/Wingdings set do not have official name. The closest thing to identification is their Postscript name in the fonts.
- Therefore, unification based on semantic usage should be avoided.

## Status

This document is an update to a previous addition proposal. It separates the characters in the following categories:

1. Candidates for unification with no glyph change for the already encoded character,
2. Candidates for unification where a glyph change was accepted for the already encoded character,
3. Candidates for unification where a glyph change may be considered for the already encoded character, but not required,
4. Candidates for addition that were included in the Amd1.2 ballot,
5. Candidates for addition that were not included in the Amd1.2 ballot. The cases for inclusion may be more or less strong, depending on similarities with existing encoded characters.

To facilitate identification, the 4 sets have been identified as such:

- Webdings (w-0033..w-00255),
- Wingdings (w-1033..w-1255),
- Wingdings2 (w-2033-w-2255), and
- Wingdings3 (w-3033..w-3255).

These identifiers are used in all column headed by 'Glyph ID' with the ' $w$-' prefix removed; for example ' 3153 ' represents ' $w$-3153'.

## Table format

The tables provide the ID as determined above, the original glyph as represented in the Webdings/ Wingdings collection, UCS code point and UCS current glyph when unification is possible, character name, and comments. When the character is not unified, the cells corresponding to UCS code point contain the following:

- A provisional UCS code point shown with underline for characters that are part of Amd1.2, (category 4 above)
- A provisional UCS code point shown with yellow highlight and underline for characters that are not part of Amd1.2 (category 5 above).
In those cases, the second glyph column is typically empty. However, in few instances a second UCS glyph is shown followed in the same cell by the UCS code point. Those cases typically correspond to case where the dis-unification is debatable and showing the 2 glyphs at the same large size is useful.

When a character is unified, the UCS code point and current glyph is shown along with the Wingdings glyph. As stated above, unified characters fall in three categories:

1. Characters for which the glyphs are very similar, except for small size difference and minor details. In that case, there is no need to call attention to glyph change in the current chart.
2. Characters for which the glyphs are different and the Wingdings was deemed better and a glyph change was approved in ISO/IEC $106463^{\text {rd }}$ edition. Note that in those occurrences the UCS 'current' glyph shown in the table is the glyph used prior to that edition.
3. Characters for which the glyphs are different and no glyph change has been approved. By default, the UCS glyph won't change unless a consensus is developed to do so.
Category 2 and 3 characters are documented in the table part of the Glyph changes consideration below.

## Source separation

The set is not currently subject to source separation as a whole. When 2 glyphs are the same across these 4 symbol set, they are assigned to the same character. There are currently three cases of such unification:

- 1F584 (proposed) for w-0155 and w-1043,
- 272F (existing) for w-0152 and w-2243,
- 29B8 (existing) for w-0120 and w-2088.

There is however a de facto source separation for each of the two sources; Wingdings and Webdings. In other words, all Wingdings have a unique mapping and all Webdings have a unique mapping. The only intersections occur between Wingdings and Webdings,

## Dis-unification between Zapf dingbats and Wingdings

There are many intersections between the two sets, where Zapf would have one element of a larger set more completely represented in Wingdings. However their shapes are typically different. It is not clear whether we should totally dis-unify those cases and re-encode the whole set part of Wingdings. The current mapping generally dis-unifies between these two groups.

## Dis-unification among pictographs

Compared to previous versions of this document, unification decisions have been more liberal. That is, if a Wingdings pictograph differs in orientation, or in color (black versus white), or in style from the current UCS character to which it is unified, it is expected that implementations of new fonts may choose either the current UCS glyph, the Wingdings variant, or an intermediate shape. In all cases, this document shows both glyphs to facilitate readers' feedback.

## Re-unification of characters dis-unified in the Amd1.2 ballot

After further consideration, it does not seem necessary to dis-unify the 'white arrow' set and the 'white rectangular arrow' set. In Amd1.2 a new set of 10 white rectangular arrows was added in 1F880-1F889 which duplicates characters already encoded in the blocks 21 xx and 2 Bxx . A preferred solution would be to re-unify these two sets and use the Wingdings set which looks better. The corresponding glyphs are all shown in Glyph changes consideration below. This decrease the Wingdings set in Amd1.2 from 504 characters to 494 characters.

## Geometric shapes sizes

The set of four fonts are designed in a consistent manner with shapes that obey strict rules concerning vertical alignment and sizes. While it is not expected that these constraints would be imposed on every implementation of these characters, it is important to document them. The following is a list of these design rules:

- All fonts use a design square EM box of 2048 space unit,
- Many geometric shapes are contained in a $1480 \times 1480$ unit box based on the default baseline ( 0 based) and centered in the middle (740),
- For shapes that are sized vertically (such as squares and circles), a maximum of 8 sizes are defined in vertical size unit; these values are related to the values defined in TR25 Unicode Support for Mathematics as follows (first value design unit, second value: TR25 names):

1. 198 , tiny
2. 296, very small
3. 394, slightly small (new, see below)
4. 592, small
5. 790, medium small
6. 1184 , medium
7. 1480, regular
8. 2048, large (see below)

The alignment with sizes defined in TR25 is reasonably accurate for all values, except for 'very small' which is implemented very inconsistently in the current UCS charts (values vary from 250 to 375 units), and the new value 'slightly small' which does not exist in TR25. The large size corresponds to a shape using the full design box (2048 unit) and it is not aligned with the previous shapes (center is at 614) in the Wingdings context.

- A $9^{\text {th }}$ sized shape is defined to be 'centered' in the 1480 square and consequently the ink size is determined by that shape. For example, the size of the sides of the centered square is 1046 corresponding to a diagonal of 1480 which allows the diamond with the same side size to fit in the 1480 square.
- Diamonds and lozenges use a different scale (1 to 6) in Wingdings, with 'large' not being represented. These values in design unit are related to the terminology used in TR25 as follows:

1. 280, tiny
2. 418 , very small
3. 558 , small
4. 838 , medium small
5. 1184, medium
6. 1675, regular

According to that scale, the already encoded character 2B29 BLACK SMALL DIAMOND should be slightly reduced in size to fit the 'small' pattern.

- More generally, scaling of the geometric shapes should be harmonized with rules used in TR25, with the understanding that some existing characters may be resized to better align with Wingdings sizing rules, especially concerning the existing 'very small glyphs' such as 2219 BULLET OPERATOR ('black very small circle) and 2B1D BLACK VERY SMALL SQUARE.
- Two sets of shapes commonly specified in TR25 as 'circled circles' are defined here as 'rings' for 'circled white circles' and 'ring buttons' for 'circled black circles' respectively because they better represent the shapes when multiple sizes are used. This is also consistent with the box and box button terms used for square based shapes.
- The proposal has kept numeric values to size rings, ring buttons, boxes, box buttons, and many other shapes (range 1 to 7 ) in proposed character names for lack of better terminology. This is subject to change. For example, the simple black shapes such as cross, $x$ form, spoked asterisks, etc... could use the TR25 size terminology.
- In sets with full 7 sizes representation (excluding the atypical 'large'), the current proposal maintains holes with cross references for already encoded character to facilitate research and verification of these cross references. Future versions of this proposal may compact these lists. In this context, cross references on empty cells imply mapping (as what was done for set such as Dingbats).
- It is intended that the shapes of the current UCS characters that are unified with geometric shapes from Wingdings will be altered to be closer to the Wingdings variant (size and position). However, this should be done with great caution because of additional hidden design relationships between various shapes.
- The case of $26 \mathrm{AB} \bullet$ MEDIUM BLACK CIRCLE is a bit problematic because it unifies geometric usage and UI usage (record). These two usages are differentiated in Wingdings
(cell size, vertical position, ink size). The proposal preserves the geometric usage (to keep consistency with TR25) and creates a new variant for UI as 23FA BLACK CIRCLE FOR RECORD.
- Similar situation for 25FC ■ BLACK MEDIUM SQUARE, with the proposed creation for a new variant for UI as 23F9 BLACK SQUARE FOR RECORD.
- The 'large' size appears larger than the already encoded 'large' glyph for reasons having to do with design decision taken for the fonts used in the UCS charts (large ascenders/ descenders). However their design unit sizes (full EM square) are identical to the equivalent Wingdings set. Therefore they have been unified.

## Geometric shapes Arrows

These sets contain a large number of arrow styles. These have been classified as following (Postscript glyph name, glyph ID as documented above, glyph, and common part of the UCS name (augmented with directionality term in full UCS name)):

| Postscript <br> name | Glyph ID | glyph | UCS name (common part) |
| :--- | :--- | :--- | :--- |
| A1 | 3153 | $\leftarrow$ | Arrow with small triangle arrowhead |
| A2 | 3033 | $\leftarrow$ | Simple triangle-headed arrow |
| A3 | 3157 | $\leftarrow$ | Arrow with medium triangle arrowhead |
| A4 | 3161 | $\leftarrow$ | Arrow with large triangle arrowhead |
| B2 | 3102 | $\leftarrow$ | Sans-serif arrow |
| Barb1 | 3209 | $\leftarrow$ | Wide-headed light barb arrow |
| Barb2 | 1223 | $\leftarrow$ | Wide-headed barb arrow |
| Barb3 | 3217 | $\leftarrow$ | Wide-headed medium barb arrow |
| Barb4 | 1231 | $\leftarrow$ | Wide-headed heavy barb arrow |
| Barb5 | 3225 | $\leftarrow$ | Wide-headed very heavy barb arrow |
| C1 | 3137 | $\leftarrow$ | Arrow with small equilateral arrowhead |
| C2 | 3141 | $\leftarrow$ | Arrow with equilateral arrowhead |
| C3 | 3145 | $\leftarrow$ | Heavy arrow with equilateral arrowhead |
| C4 | 3149 | $\leftarrow$ | Heavy arrow with large equilateral arrowhead |
| D1 | 3165 | $\leftarrow$ | Triangle headed arrow with narrow shaft |
| E3 | 3167 | $\leftarrow$ | Triangle headed arrow with medium shaft |
| F4 | 3169 | $\leftarrow$ | Triangle headed arrow with bold shaft |
| G5 | 3171 | $\leftarrow$ | Triangle headed arrow with heavy shaft |
| H6 | 3177 | $\leftarrow$ | Triangle headed arrow with very heavy shaft |
| 18 | 3179 | $\leftarrow$ | Finger-post arrow |

| Postscript <br> name | Glyph ID | glyph | UCS name（common part） |
| :--- | :--- | :--- | :--- |
| J6 | 3181 |  | Squared arrow |
| K6 | 3185 | $\mathbf{}$ | Arrow with notched tail |
| L7 | 3189 | $\mathbf{~}$ | Compressed arrow |
| M9 | 3193 | $\mathbf{~}$ | Heavy compressed arrow |
| N7 | 3197 | $\mathbf{~}$ | Heavy arrow |

The literal part of the Postscript name indicates style（A to $N$ and Barb）；the numeral part indicates the thickness of the arrow．These names are documented in relevant parts of the following tables．

## Glyph changes consideration

The following Wingdings characters have glyphs which are similar to already encoded characters and as such have been unified．In some cases，it may be preferable to change the representative glyph to be（or be closer to）the Wingdings glyph．Note that none of these glyph changes affect the Dingbat block for reasons exposed above．The following table should be considered as background information to make a decision about the eventual glyph to use in the future for these code points：either keep the existing UCS one，or adopt the Wingdings one，or something in between．

The status column contains a＇$x$＇for the changes（total of 13）that were approved as part of the final review of the $3^{\text {rd }}$ edition of ISO／IEC 10646 （category 2 as specified above）．For production reason，these new glyphs do not show in the charts used in Pdam 1．2，but will be used in future versions of that amendment．Others （category 3）should be considered by experts when commenting during the ballot period．

| Wing dings ID | Wing dings glyph | UCS | UCS glyph | Status | Name and comment |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1239 | 它 | 21 E 6 | $\Leftarrow$ |  | LEFTWARDS WHITE ARROW |

## Arrowheads

| ID | glyph | UCS | glyph | Name | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3233 | 4 | 2BE0 |  | LEFTWARDS TRIANGLE ARROWHEAD = draw left | Names from PS names |
| 3234 | , | 2BE1 |  | RIGHTWARDS TRIANGLE ARROWHEAD <br> = draw right |  |
| 3235 | - | 2BE2 |  | UPWARDS TRIANGLE ARROWHEAD = draw up |  |
| 3236 | $\checkmark$ | 2BE3 |  | DOWNWARDS TRIANGLE ARROWHEAD = draw down |  |
| 3237 | 4 | 2BE4 |  | LEFTWARDS WHITE ARROW WITHIN TRIANGLE ARROWHEAD = draw double left |  |
| 3238 | $\checkmark$ | 2BE5 |  | RIGHTWARDS WHITE ARROW WITHIN TRIANGLE ARROWHEAD = draw double right |  |
| 3239 | n | 2BE6 |  | UPWARDS WHITE ARROW WITHIN TRIANGLE ARROWHEAD = draw double up |  |
| 3240 | $v$ | 2BE7 |  | DOWNWARDS WHITE ARROW WITHIN TRIANGLE ARROWHEAD = draw double down |  |

## Unicode Character properties

All characters with few exceptions have characters properties as such:
xxxx; Yyy' ; So;ON; ; ; N; ; ;
with 'xxxx' being the character code point and 'yyyy' being the character name. For example:

```
23F4;BLACK MEDIUM LEFT-POINTING TRIANGLE;So;ON;;;;N;;;;
23F5;BLACK MEDIUM RIGHT-POINTING TRIANGLE;SO;ON;;;;N;;;;
23F6;BLACK MEDIUM UP-POINTING TRIANGLE;SO;ON;;;;N;;;;
```

Therefore the full data set can be constructed using the proposed code points and names provided in the rest of this document. The only exceptions are the two following proposed characters with properties as follows:

```
1F10B;DINGBAT CIRCLED SANS-SERIF DIGIT ZERO;NO;0;EN;;;0;0;N;;;;
1F10C;DINGBAT NEGATIVE CIRCLED SANS SERIF DIGIT ZERO;No;0;EN;;;0;0;N;;;;
```

A full list will be provided by the author as appropriate, generated automatically based from the names list used in the charts.

## Line breaking property

All proposed characters have the line breaking property value 'AL'.
Ordering
All new characters would be ordered either following their normalized equivalent for the DIGIT ZERO for the two new characters mentioned above, or according to other symbols for all other characters.

## Confusability

None of these symbols should be used in context where confusability is a concern. For example, they should not be allowed in Internationalized Domain Names (IDN). Some of these characters are similar in shapes to already encoded symbols.

## ISO/IEC JTC 1/SC 2/WG 2 PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC $10646{ }^{1}$ Please fill all the sections $A, B$ and $C$ below.

Please read Principles and Procedures Document (P \& P) from http://www.dkuug.dk/JTC1/SC2/WG2/docs/principles.html for guidelines and details before filling this form.
Please ensure you are using the latest Form from http://www.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html. See also http://www.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html for latest Roadmaps.

## A. Administrative

1. Title:

## Proposal for encoding Wingdings

2. Requester's name:
3. Requester type (Member body/Liaison/Individual contribution):
4. Submission date:
5. Requester's reference (if applicable):
6. Choose one of the following:

This is a complete proposal:
(or) More information will be provided later:
Yes

## B. Technical - General

1. Choose one of the following:
a. This proposal is for a new script (set of characters):
Proposed name of script:
b. The proposal is for addition of character(s) to an existing block:
Name of the existing block:
2. Number of characters in proposal:

Individual contribution
ichel Suignard 5/3/2011
:
3. Proposed category (select one from below - see section 2.2 of P\&P document):

| A-Contemporary | B.1-Specialized (small collection) D-Attested extinct |  |  | X |
| :---: | :---: | :---: | :---: | :---: |
| C-Major extinct |  | B.2-Specialized (large collection) E-Minor extinct |  |  |
| F-Archaic Hierogly | Ideographic | -Obscure or questionable usage symbols |  |  |
| Is a repertoire including character names provided? |  |  | Yes |  |
| a. If YES, are the names in accordance with the "character naming guidelines"in Annex L of P\&P document? |  |  |  |  |
| b. Are the chara | apes attached in a legible form sut | ble for review? | Yes |  |

5. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard? Author
If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:
6. References:
a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? Yes
b. Are published examples of use (such as samples from newspapers, magazines, or other sources)
of proposed characters attached? .-.----------------------- but indirect reference provided
7. Special encoding issues:

Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)?
Yes
8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at http://www. unicode.org for such information on other scripts. Also see http://www.unicode.org/Public/UNIDATA/UCD.html and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.
