Summary

The following document describes the status of encoding of four popular symbol sets: Webdings, Wingdings, Wingdings 2, and Wingdings 3. These sets contain 867 characters. These were accommodated as follows:

- 509 characters have been proposed for addition in Amendment 1 (FDAM1),
- 86 characters have been proposed for addition in Amendment 2 (DAM 2),
- 266 characters were unified with existing characters,
- 5 characters were unified between the Webdings and the Wingdings sets, 2 of those would have been of the Amd1 set, the remaining 3 were part of the unified set.
- 1 character was not proposed for encoding, based on trademark issue.

The document does not cover the background and rationale. For those topics, please refer to the documents mentioned in the reference lines above. However, it can be used as a reference for discussion concerning Amendment 1 and 2 related to these characters, especially in the context of disposing of ballot comments. It reflects changes made when disposing pdam2.2 comments, the Amendment 1 content (509 characters) is now frozen.

Acknowledgements
This work would not have been possible without the earlier work by Asmus Freytag, Michael Everson, and Debbie Anderson who contributed extensively to the analysis of these symbols.

This project was made possible in part by a grant from the U.S. National Endowment for the Humanities, which funded the Universal Scripts Project (part of the Script Encoding Initiative at UC Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of the National Endowment of the Humanities.
1. Notation

To facilitate identification, the 4 sets have been identified as such:

- Webdings (w-0033..w-00255),
- Wingdings (w-1033..w-1255),
- Wingdings2 (w-2033..w-2255),
- Wingdings3 (w-3033..w-3255).

These identifiers are used in all column headed by ‘Glyph ID’ or ‘Wingdings ID’ with the ‘w-’ prefix removed; for example ‘3153’ represents ‘w-3153’.

2. Source separation

The set is not currently subject to source separation as a whole. When 2 glyphs are the same across these 4 symbol set, they are assigned to the same character. There are currently five cases of such unification:

- 272F (existing character) for w-0152 and w-2243,
- 29B8 (existing character) for w-0120 and w-2088,
- 1F4CB (existing character) for w-0164 and w-2050,
- 1F56E (proposed character) for w-0167 and w-1038,
- 1F583 (proposed character) for w-0155 and w-1043.

There is however a de facto source separation for each of the two sources; Wingdings and Webdings. In other words, all Wingdings have a unique mapping and all Webdings have a unique mapping. The only intersections occur between Wingdings and Webdings,
3. Unification and glyph changes consideration

The following Wingdigs characters have glyphs which are similar to already encoded characters and as such have been unified. In some cases, it was deemed preferable to change the UCS representative glyph to be (or be closer to) the Wingdings glyph. Note that none of these glyph changes affected the Dingbat block. The following table should be considered as background information to make future decision about the eventual glyph to use for these code points: either keep the existing UCS one, or adopt the Wingdings one, or something in between.

The status column contains three values:
- **blank**, in that case the UCS glyph is still used for chart production and was unchanged.
- ‘x’ indicating that the Webdings glyphs replaced the original UCS glyphs. In that case, the UCS glyph column shows the UCS glyphs from the previous version of the standard (pre Amendment 1) unless blank for production issues (white arrows), and the Wingdings glyphs are the ones in the current chart production for these already encoded characters.
- ‘y’ indicating that the UCS glyphs were modified to better accommodate the unification but are still different from the Webdings glyphs.

4. Additions with glyph changes

Most of the Webdings and Wingdings characters are proposed for encoding using their original glyphs. However some have been changed significantly. Minor change in size and change in horizontal orientation are not considered significant.

The following table shows all these significant changes.

<table>
<thead>
<tr>
<th>Wingdings ID</th>
<th>Wingdings glyph</th>
<th>UCS</th>
<th>UCS glyph</th>
<th>Name</th>

5. Geometric shapes sizes

The set of four fonts are designed in a consistent manner with shapes that obey strict rules concerning vertical alignment and sizes. While it is not expected that these constraints would be imposed on every implementation of these characters, it is important to document them. The following is a list of these design rules:

- All fonts use a design square EM box of 2048 space unit,
- Many geometric shapes are contained in a 1480x1480 unit box based on the default baseline (0 based) and centered in the middle (740),
- For shapes that are sized vertically (such as squares and circles), a maximum of 8 sizes are defined in vertical size unit; these values are related to the values defined in TR25 Unicode Support for Mathematics as follows (first value design unit, second value: TR25 names):
  1. 198, tiny
  2. 296, very small
  3. 394, slightly small (new, see below)
  4. 592, small
  5. 790, medium small
  6. 1184, medium
  7. 1480, regular
  8. 2048, large (see below)

The alignment with sizes defined in TR25 is reasonably accurate for all values, except for ‘very small’ which is implemented very inconsistently in the current UCS charts (values vary from 250 to 375 units), and the new value ‘slightly small’ which does not exist in TR25. The large size corresponds to a shape using the full design box (2048 unit) and is not aligned with the previous shapes (center is at 614) in the Wingdings context.

- A 9th sized shape is defined to be ‘centered’ in the 1480 square and consequently the ink size is determined by that shape. For example, the size of the sides of the centered square is 1046 corresponding to a diagonal of 1480 which allows the diamond with the same side size to fit in the 1480 square.
- Diamonds and lozenges use a different scale (1 to 6) in Wingdings, with ‘large’ not being represented. These values in design unit are related to the terminology used in TR25 as follows:
  1. 280, tiny
  2. 418, very small
  3. 558, small
  4. 838, medium small
  5. 1184, medium
  6. 1675, regular

According to that scale, the already encoded character 2B29 BLACK SMALL DIAMOND should be slightly reduced in size to fit the ‘small’ pattern.

- More generally, scaling of the geometric shapes should be harmonized with rules used in TR25, with the understanding that some existing characters may be resized to better align with Wingdings sizing rules, especially concerning the existing ‘very small glyphs’ such as 2219 BULLET OPERATOR (‘black very small circle) and 2B1D BLACK VERY SMALL SQUARE.

- Two sets of shapes commonly specified in TR25 as ‘circled circles’ are defined here as ‘rings’ for ‘circled white circles’ and ‘ring buttons’ for ‘circled black circles’ respectively because they better represent the shapes when multiple sizes are used. This is also consistent with the box and button terms used for square based shapes.
- The proposal has kept numeric values to size rings, ring buttons, boxes, box buttons, and many other shapes (range 1 to 7) in proposed character names for lack of better terminology. This is subject to change. For example, the simple black shapes such as cross, x form, spoked asterisks, etc… could use the TR25 size terminology.

- In sets with full 7 sizes representation (excluding the atypical ‘large’), the current proposal maintains holes with cross references for already encoded character to facilitate research and verification of these cross references. Future versions of this proposal may compact
these lists. In this context, cross references on empty cells imply mapping (as what was done for set such as Dingbats).

- It is intended that the shapes of the current UCS characters that are unified with geometric shapes from Wingdings will be altered to be closer to the Wingdings variant (size and position). However, this should be done with great caution because of additional hidden design relationships between various shapes.
- The case of 26AB ● MEDIUM BLACK CIRCLE is a bit problematic because it unifies geometric usage and UI usage (record). These two usages are differentiated in Wingdings (cell size, vertical position, ink size). The proposal preserves the geometric usage (to keep consistency with TR25) and creates a new variant for UI as 23FA BLACK CIRCLE FOR RECORD.
- Similar situation for 25FC □ BLACK MEDIUM SQUARE, with the proposed creation for a new variant for UI as 23F9 BLACK SQUARE FOR STOP.
- The ‘large’ size appears larger than the already encoded ‘large’ glyph for reasons having to do with design decision taken for the fonts used in the UCS charts (large ascenders/ descendents). However their design unit sizes (full EM square) are identical to the equivalent Wingdings set. Therefore they have been unified.

Geometric shapes Arrows

These sets contain a large number of arrow styles. These have been classified as following (Postscript glyph name, glyph ID as documented above, glyph, and common part of the UCS name (augmented with directionality term in full UCS name)):

<table>
<thead>

<td>Heavy arrow</td>
</tr>
</tbody>
</table>

The literal part of the Postscript name indicates style (A to N and Barb); the numeral part indicates the thickness of the arrow. These names are documented in relevant parts of the following tables.
6. Detailed tables

The following tables show in details all 867 characters from the four sets with their status as being unified, proposed for encoding in either amendment, or not proposed (one case: w-1255).

Table format
The tables provide the following information by columns:

- The first column contains the glyph ID of the Wingdings collection using the 4 digit notation.
- The second column contains the representative glyph of these Webdings/Wingdings.
- The third column contains a related UCS code represented as follows:
  - Code without highlight or underline means that the corresponding Wingdings character is unified with an existing UCS character encoded with corresponding UCS code point.
  - Code with underline only means that the corresponding Wingdings character is proposed for encoding in Amendment 1 with the UCS code point as shown.
  - Code with underline and highlight means the corresponding Wingdings character is proposed for encoding in Amendment 2 with the UCS code point as shown.
  - No code, the character is neither unified, nor proposed for encoding.
- The fourth column contains a glyph whose status depends on the status of the previous column (UCS code):
  - If the Wingdings is unified (UCS code without underline or highlight), the glyph is the one used for chart production. It may or may not be identical to the Wingdings glyph. See section 3 for further consideration.
  - If the Wingdings is proposed for encoded (UCS code underlined with or without highlight), the glyph may be blank indicating that the original Wingdings is used for chart production for these new characters. If the glyph is not blank, it means that the original Wingdings is not used and instead an alternate glyph as shown is used for these newly proposed characters.
- The fifth column contains the name of the proposed or unified character with along with annotation and references similar to what is used in the standard code charts.
- The sixth column contains additional comments. Some of these comments may apply to the following rows.

Accuracy
Every effort has been made to reflect correctly what is currently proposed in both Amendment 1 (FDAM1) and Amendment 2 (DAM2). If there are differences in code point value or representative glyphs, the amendment text and charts prevail.

7. Source reference

The following information provides the source reference for the Windings and Webdings symbols as currently proposed. It could be added to the standard.

xx.x: Source references for wingdings and webding symbols
(normative)
1st field: UCS code point
2nd field: first reference
3rd field: 2nd reference (optional)
#
# This file provides mappings between Unicode code points on one hand
# and Webdings and Wingdings indexes on the other hand.
# Very few code points have more than one index, but in no case more than two.
# Indexes have decimal values, going from 0033 to 0255 for Webdings,
# 1033 to 1254 for Wingdings, 2033 to 2249 for Wingdings 2, and
# 3033 to 3240 for Wingdings 3, except for 0127, 1127, 2127, and 3127.
#
# Format: Semicolon-delimited file with a fixed number of fields.
#
