Dear Dr. Mark Davis,

Please refer the encoding of the Meetei Mayek script in the Unicode Standard for representing Manipuri language. In the 116th meeting of the Unicode Technical Committee(UTC#116), it was decided to encode only 56 characters of the Meetei Mayek script as recommended by Government of Manipur. It was also mentioned that 23 characters not recognized by Govt. of Manipur were withdrawn for further study.

It is noted that these characters have been added in Unicode Standard (Version 6.2) as Meetei Mayek Extensions.

Government of Manipur vide its letter no. 18/1/2013-SE(S)M/Mayek dated 22.2.2013 (copy of the letter also marked to Dr. Lisa Moore) has requested deletion/ removal of these characters from the Unicode Standard as these characters may create confusion among the user community.

In view of the above we request you to kindly address the concern raised by Government of Manipur.

Thanking you.

Regards,

Yours sincerely,

(Dr. Rajendra Kumar)
