Proposal to encode archaic vowel signs O OO for Kannada

Shriramana Sharma, jamadagni-at-gmail-dot-com, India
2014-Feb-02

§1. Thanks
I thank Srinidhi of Tumkur, Karnataka, for alerting me to these old vowel signs used in Kannada and for providing the attestations, thus leading to this proposal.

§2. Introduction
The Kannada encoding currently has the following vowel signs for short ō and long ō:

<table>
<thead>
<tr>
<th>Code</th>
<th>Kannada Vowel Sign</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0CCA</td>
<td>◌ೊ</td>
<td>Kannada Vowel Sign O</td>
</tr>
<tr>
<td>0CCB</td>
<td>◌ೋ</td>
<td>Kannada Vowel Sign OO</td>
</tr>
</tbody>
</table>

This is a proposal to encode two more vowel signs denoting the same short ō and long ō but consistently different in shape which are contrasted in old Kannada grammars:

<table>
<thead>
<tr>
<th>Code</th>
<th>Kannada Vowel Sign</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0CBA</td>
<td>◌</td>
<td>Kannada Vowel Sign Archaic O</td>
</tr>
<tr>
<td>0CBB</td>
<td>◌</td>
<td>Kannada Vowel Sign Archaic OO</td>
</tr>
</tbody>
</table>

As shown below, these are found in archaic use and must be encoded for the textual representation of those earlier writings.

§3. Discussion
In L2/14-005* I have discussed the two systems followed in the Telugu and Kannada scripts as regards the vowel signs for O and OO. While the Kannada script currently employs a two-part vowel sign ◌ + ◌ for indicating O, earlier Kannada writings and printings have used a single-part vowel sign for O. In both cases, the length mark ◌ is added for OO.

To elucidate this: in the old style, for KA ಕ, kō was written as ◌, i.e. using a single-part vowel sign ◌. kō with the long vowel was written as ◌.

In both Telugu and Kannada, the two systems are contrasted in the same text.

Attestations for the usage of the single-part vowel signs in Kannada follow.

* ... which I submit as a separate document since its scope also includes Telugu and since it is of the nature of a technical note discussing the two systems, various alternate notations etc in detail.
§4. Attestations

etc...
§5. Argument for disunification

In the script review doc L2/14-053 p 2 it has been suggested that encoding these characters might constitute a “duplicate encoding since they are semantically identical to the already encoded O’s (no examples of contrast were provided)”. 

First it is not clear what “semantically identical” means. While there is linguistic identity in that both forms represent the same sounds, orthographically these are two different forms resulting from a divergent evolution between two different orthographic practices in the transitional period of Kannada and Telugu from the old Deccan (aka proto-Telugu-Kannada) script. Hence even in Telugu one sees this contrast as detailed in L2/14-005. As for Kannada the contrast is seen in p 5 and hence the comment about “no examples of contrast” may be since the earlier version of this doc had not highlighted the contrast.

Orthographic distinction was the basis for distinctive encoding in the case of 09B0 র vs 09F0 ব denoting ra in different orthographies of Bengali and likewise for 0D08 :bg vs 0D5F* ॕ (see L2/12-225 N4312) denoting i in Malayalam. The same should be done here.

The review document also notes: “it is not clear that the distinction in the glyphs could not be done in an OpenType font”. Smart font technologies like Graphite and OpenType can be used to accomplish very many modifications to the glyphs – even interchange As and Bs – but that does not mean it is advisable to do so. In this particular case, apart from the primary reason of orthographic distinctiveness discussed above, the canonical decomposition provided for the existing vowels applies only since they are two-part, while the single-part signs contrasted in the texts would not so decompose.

Hence distinctive encoding is warranted.

§6. Encoding model

While there is no problem in encoding just the single-part vowel sign for O◌ and adding 0CD5 ◌ Kannada LENGTH MARK for the long vowel, I propose to encode characters for both O and OO to retain symmetry with the existing Kannada vowel signs for O and OO. There is no constraint for space in the Kannada block.

Thus to achieve the old orthography, one only needs to add the appropriate vowel sign to the consonant or consonant cluster:

क + ◌ → ಕ◌  क + ◌◌ → ಕ◌◌
Canonical Decomposition

Note that the proposed vowel sign for long OO would obviously require a canonical decomposition to the proposed one for short O followed by the length mark:

\[
\begin{align*}
0CBB & \quad \text{KANNADA VOWEL SIGN ARCHAIC OO} \\
& = 0CBA \textcircled{\text{॒}} 0CD5 \textcircled{॒}
\end{align*}
\]

... which is parallel to the existing vowel sign for long OO:

\[
\begin{align*}
0CCB & \quad \text{KANNADA VOWEL SIGN OO} \\
& = 0CCA \textcircled{॒} 0CD5 \textcircled{॒}
\end{align*}
\]

However, unlike the existing vowel sign for short O i.e. \(0CCA \textcircled{॒}\) (which decomposes to \(0CC6 \textcircled{॒} 0CC2 \textcircled{॒}\)), the newly proposed \(0CBA \textcircled{॒}\) can not have any canonical decomposition as it is unitary in shape.

Choice of codepoints

The codepoints are chosen as \(0CBA\) and \(0CBB\) so as to fill up a “hole” in the Kannada block between \(0CB9\) K ANNADA LETTER HA and \(0CBC\) K ANNADA SIGN NUKTA. This will also exactly position them in the charts beside the existing vowel signs for O and OO at \(0CCA\) and \(0CCB\).

§7. Character Properties

The proposed glyphs are:

\[
\begin{align*}
\textcircled{॒} & \quad 0CBA \\
\textcircled{॒} & \quad 0CBB
\end{align*}
\]

The character properties are all identical to those of the existing vowel signs for O and OO except that the long vowel gets the correct canonical decomposition:

\[
\begin{align*}
0CBA; & \text{KANNADA VOWEL SIGN ARCHAIC O;}Mc;0;L;;;;N;;;;; \\
0CBB; & \text{KANNADA VOWEL SIGN ARCHAIC OO;}Mc;0;L;0CBA 0CD5;;;;N;;;;;
\end{align*}
\]

NamesList.txt should take a section header before these two characters as follows:

@ Archaic vowel signs

As for collation, normally a given text would use either the existing new-style or the newly proposed old-style characters. Even if both styles are encountered, they should be collated equivalent to each other.
§7. Official Proposal Summary Form

(Based on N3902-F)

A. Administrative

1. Title
   Proposal to encode archaic vowel signs O OO for Kannada

2. Requester’s name
   Shriramana Sharma

3. Requester type (Member body/Liaison/Individual contribution)
   Individual contribution

4. Submission date
   2014-Feb-02

5. Requester’s reference (if applicable)
   This is a complete proposal.

B. Technical – General

1. Choose one of the following:
   1a. This proposal is for a new script (set of characters), Proposed name of script
      No.
   1b. The proposal is for addition of character(s) to an existing block, Name of the existing block
      Yes. Kannada.

2. Number of characters in proposal
   2 (two)

3. Proposed category
   Category B1, specialized small (for these characters, though Kannada itself is “A, contemporary”)

4. Is a repertoire including character names provided?
   Yes.

4a. If YES, are the names in accordance with the “character naming guidelines” in Annex L of P&P document?
   Yes.

4b. Are the character shapes attached in a legible form suitable for review?
   Yes.

5. Fonts related:
   a. Who will provide the appropriate computerized font to the Project Editor of 10646 for publishing the standard?
      Shriramana Sharma.
   b. Identify the party granting a license for use of the font by the editors (include address, e-mail etc.)
      Shriramana Sharma and other contributors to the Lohit font project under the Open Font Licence.

6a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided?
   Yes.

6b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached?
   Yes.

7. Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (If yes please enclose information)?
   Collation is discussed in the proposal.

8. Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script.
   See detailed proposal.

C. Technical – Justification

1. Has this proposal for addition of character(s) been submitted before? If YES, explain.
   This is a revised version of a document submitted earlier this month revised in response to feedback.

2a. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)?
   Yes.

2b. If YES, with whom?
2c. If YES, available relevant documents

None specifically. The matter was discussed in person or via email.

3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included?

Those who would like to use the old-style orthography for the Kannada vowel signs O/OO.

4a. The context of use for the proposed characters (type of use; common or rare)

Rare. For recording heritage texts.

4b. Reference

See detailed proposal.

5a. Are the proposed characters in current use by the user community?

No.

5b. If YES, where?

6a. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP?

Yes.

6b. If YES, is a rationale provided?

Yes.

6c. If YES, reference

They belong in the Kannada block which is in the BMP.

7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?

Yes.

8a. Can any of the proposed characters be considered a presentation form of an existing character or character sequence?

No.

8b. If YES, is a rationale for its inclusion provided?

8c. If YES, reference

9a. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters?

Yes. The proposed long vowel sign OO is equivalent to the proposed short vowel sign 0 followed by length mark. No existing characters can be used to compose these however.

9b. If YES, is a rationale for its inclusion provided?

Yes. To retain symmetry with the existing encoded characters.

9c. If YES, reference

See detailed proposal.

10a. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character?

No.

10b. If YES, is a rationale for its inclusion provided?

10c. If YES, reference

11a. Does the proposal include use of combining characters and/or use of composite sequences?

The characters by nature are Indic combining marks.

11b. If YES, is a rationale for such use provided?

11c. If YES, reference

11d. Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided?

12a. Does the proposal contain characters with any special properties such as control function or similar semantics?

No.

12b. If YES, describe in detail (include attachment if necessary)

13a. Does the proposal contain any Ideographic compatibility character(s)?

No.

13b. If YES, is the equivalent corresponding unified ideographic character(s) identified?

13c. If YES, reference:

-o-o-o-
