

Additional Symbols for Astrology

by David Faulks (davidj_faulks@yahoo.ca)

April 15, 2016

♁ ⋈ ⚡ ⚛ ⚔ ⚕ ⚖ ⚗ ⚘ ⚙ ⚚ ⚛ ⚜ ⚝ ⚞ ⚟ ⚠

1. Introduction

The purpose of this proposal is to request the addition to Unicode of 13 symbols used by some astrologers. Unlike my previous proposals, these symbols are a miscellaneous collection, and so there is no single history section. Names and details will be discussed in the individual sections after this introduction.

In addition, there are a number of related symbols which I am not currently proposing due to being marginal in usage. However, this might not be a good enough reason to not encode them. Attempting to get feedback on the Unicode mailing list has not been fruitful for me so far, and thus I would like it if the UTC gave me some feedback on these possible characters after reviewing this proposal.

It is initially proposed that these symbols be encoded in the *Miscellaneous Symbols and Arrows* block, with a gap in the middle that is already filled by the existing two-headed arrows. However, since there are still additional astrological symbols to encode (as well as possible marginal use symbols), it *might* be better to setup an additional block in the SMP, and move all the proposed astrological characters there.

The symbols with proposed codepoints and names are below:

♁	U+2BE8	ASTROLOGICAL	PLANET	TRANSPLUTO
⋈	U+2BE9	ASTROLOGICAL	PLANET	PROSERPINA
⚡	U+2BEA	ASTROLOGICAL	PLANET	PRIAP
⚛	U+2BEB	ASTROLOGICAL	PLANET	RAZI
⚔	U+2BF0	ASTROLOGICAL	SYMBOL	FOR ASTRAEA
⚕	U+2BF1	ASTROLOGICAL	SYMBOL	FOR HYGIEA

	U+2BF2 PHOLUS
	U+2BF3 NESSUS
	U+2BF4 WHITE MOON SELENA
	U+2BF5 WHITE MOON SELENA WITH RAYS
	U+2BF6 BLACK DIAMOND ON CROSS
	U+2BF7 BLACK CRESCENT WITH BAR
	U+2BF8 ASTROLOGICAL POINT PRIAPUS

Proposed character properties should be the same as similar symbols, so except for the codepoints and names, I propose they should be as below.

2BE8;ASTROLOGICAL PLANET TRANSPLUTO;So;0;ON;;;;;N;;;;;

As symbols, these characters should have no special line-breaking properties. When it comes to collation, these points are generally not used together, and have no real defined order other than appearing after Pluto in listings. However, for individual symbols,  and  usually appear directly after the asteroid symbols    ,  and  are always placed directly after , and  is placed after .

The *Proposal Summary Form* is attached to the end of this proposal, as seems to be the practice nowadays.

2. Transpluto ⚄⚄

This 'Hypothetical Planet' is known most commonly among astrologers as **Transpluto**, and less commonly by other names such as **Bacchus**¹, **Persephone**², and **Isis**. It's 'discovery' is generally attributed to French astronomer *Francis M.E. Sevin*³, who predicted the planet in 1946.⁴ Astrologers later picked up the planet for use, German astrologer *Theodor Landscheidt*⁵ is usually given the credit for publishing the first ephemeris in 1972, although a German astrology wiki lists a *Hans Haussman* as producing one in 1966.⁶

I have not been able to find an definitive origin for the symbol, although the German AstroWiki includes an image which indicates the symbol existed as early as 1972.

3. Proserpina (Proserpine)]·[l

Astrology in Russia, although still ‘Western’ astrology, has a number of distinctive features. One of them is the popularity of a ‘Hypothetical’ known as Прозерпина.⁷ Felt to orbit the sun beyond Pluto with a period of 550 to 700 years (most commonly 650 to 665 years)⁸, many Russian astrology sites do not mention that this ‘planet’ has not been spotted by astronomers.⁹

I was unable to determine where this object came from, or which astrologer first proposed it, although it seems Pavel Globa popularized it. Many sites repeat that it was ‘uncovered’ in 1984, without any more details¹⁰. At least one site declares that the object probably originated from a ‘Planet X’ proposed by Soviet astronomers in the 60's.¹¹

Regardless of where it came from, there is a symbol for the object that is well defined :]·[. While it may seem that this symbol can be emulated using punctuation (like][or]*[), this symbol does have glyph variants, like the dot being replaced by a circle (as in]·[), or the ‘brackets’ being replaced with crescents, which demonstrate that using punctuation could be problematic for stability. Furthermore, the symbol is treated as a single unit by astrology fonts, software, and astrologers—so using an ad-hoc collection of punctuation (which could be broken in the middle) defies expectations. Therefore, this symbol is best encoded as such.

An example of Proserpina from listings (inside a chart) probably produced by the astrology program *Sotis* (or some other program from *Astro-Soft*).

4. Priap/Shatavaesh and Razi ♁ ♁

Proserpina is actually far from the only ‘Hypothetical Planet’ used in Russian astrology. I have also come across discussions of Vulcan and Phaeton,¹² and the page [Ephemerides of the Hypothetic Planets of the Avestan School](#) lists no less than 12 ‘Hypotheticals’, including Proserpina. Google searches reveal that all of these are indeed used.¹³

However, unlike the Uranian Planets, these symbols do not seem to be used as a set. **Proserpina** ♃ is by far the most common (as shown previously). The other ‘trans-plutonians’ (**Isis** ♃, **Osiris** ♃, and **Anubis** ♃) are very rarely used, and so are the ‘guardians’ **Utopia/Rapitvina** ♃, **Vanad** ♃, **Haurang** ♃, and **Tishtar** ♃. Although clearly defined, I have decided that these symbols are a too rare for me to propose them (If the UTC advises otherwise, please let me know).

The remaining 4 are used as a set by at least one Russian astrology program,¹⁴ and the symbol for **Vakshya** is the most commonly used after Proserpina. However, this symbol is identical to ♃ (U+1F70D : ALCHEMICAL SYMBOL FOR SULFUR), so there is no need to propose a separate symbol. The

12 This page about Chiron: [ХИРОН — ШПИТА](#) includes a (non-unique) diagram with symbols for Vulcan and Phaeton.
 13 Some pages that includes charts which have these: [Брак Принца Уильяма и Кейт Мидлтон](#) (for Osiris, Isis, and Anubis), [Землетрясение в Италии](#) (Vanad, Haurang, and Tishtar), and [Гороскоп Зигмунда Фрейда, с точки зрения Стражей Неба](#) (Vanad, Haurang, and Utopia).
 14 That program is called [Радикс](#).

‘evil moon’ **Aza** is most commonly shown with a glyph identical to ☉ (U+25C9 : FISHEYE), or sometimes ◎ (U+1F78B : ROUND TARGET), and although using different symbols for the same concept is undesirable, I did not think Aza was common enough to propose when it does not have a unique glyph.

That leaves **Priap** ♃ (also known as Shatavaesh, but Priap is more common), and **Rasi** ♃, to be proposed. The name Priap is a transliteration from Russian—it is arguably more correct to translate it as Priapus, but there is also an asteroid called Priapus, as well as a virtual point used in astrology, so using just ‘Priap’ reduces possible confusion.

Sample 4.1

From: <http://astropro.ru/verialina22051966/?p=blog&id=12875>

From a horoscope in the article at the above blog post, which seems to have something to do with the astrology related the notorious Dyatlov Pass incident—the chart is apparently for Yuri Yudin.

Sample 4.2

From: <https://www.zoroastrian.ru/node/2272>

Part of a listing in an astrological article about World War II. The chart is for Nazi Germany.

♃ _R	22° 17' 28" 35" (♁)	♃	10° 08' 32" 28" (♈)	Денет
♋	07° 00' 29" 35" (♃)	♁ _R	19° 08' 39" 24" (♁)	Скат
♁	19° 01' 53" 52" (♋)	☉	06° 17' 50" 48" (♃)	
♁ _R	09° 17' 33" 56" (♋)	♃	08° 17' 50" 13" (♈)

Германия с 1933 по 1945

Sample 4.3

From: <http://forum.argo-school.ru/showthread.php?t=11014>

♃ _R	16° 02' 06" (♁)
♃	5° 54' 58" (♁)
♃ _R	16° 38' 00" (♁)
♁ _R	29° 36' 47" (♁)
Asc	8° 29' 16" (♁)
☉	19° 32' 46" (♁)

Part of one of several charts in a post in an astrology forum discussion (about nuclear events). All the charts use the same points, but the only Avestan planets used are **Priap** and Vakshya.

Sample 4.4

From: http://vk.com/topic-11449085_28114621?offset=200

The reason for the discussion is unclear to me, but a post in the forum includes the chart I've taken this sample from.

Sample 4.5

From: <http://news19.ru/goroskop/6644-bolshaya-skovoroda-ili-kipyaschiy-kotel-dlya-valentiny-ustyahinoy.html>

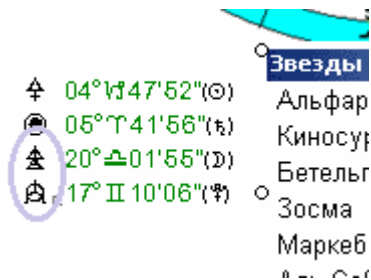

Part of a listing in a chart, which despite being posted in 2015 seems to come from a fairly old astrology program. The listing here also includes **Vakshya**, **Isis**, and perhaps **Osiris** and **Anubis**.

Sample 4.6

From: <http://www.arctida.ru/stati/187-2015-11-10-13-19-26>

From an astrological article about Ted Bundy.

Sample 4.7

From: http://rodovod.narod.ru/index/astrologija_i_iskusstvo/0-128

Part of many charts on the above page, *Астрология и искусство*. These charts do happen to include the lesser used hypotheticals **Haurang** and **Vanand**.

Sample 4.8

From: <https://zoroastrian.ru/node/2231>

Part of a horoscope cast for a fictional character.

5 Hygiea and Astraea ☿ ☿

When it comes to using main-belt Asteroids (as well as NEO Asteroids) in astrology, the first 4 discovered (Ceres ♁, Pallas ♁, Juno ♁, and Vesta ♁), have become somewhat popular, thanks to promotion since the 1970's.¹⁵ Asteroids beyond this are much discussed,¹⁶ but using symbols for them in charts (and even more rarely, listings and tables) is somewhat rare. A handful of sites publish charts with many asteroid symbols,¹⁷ and a number of other sites add only a few. For these latter, sites, the stand-out (in terms of quantity) symbols are ☿ for the asteroid Astraea, and ☿ for the asteroid Hygiea. This is likely because the most prominent English-language astrology program, Solar Fire, has included these two asteroids (alongside the other 4) as 'standard points' for quite a long time (since 1998 at least, since that is when Solar Fire v4.15 was produced).¹⁸

The symbols ☿ ☿ used in Solar Fire, as well as other programs and sites relating to astrology, are not the same as the astronomical symbols invented for these asteroids back when they were discovered in the 19th century.¹⁹ I was unable to find confirmation of this, but the astrological symbols were most likely invented by astrologer Martha Lang-Wescott.²⁰ For this reason, the names proposed are ASTROLOGICAL SYMBOL FOR ASTRAEA and ASTROLOGICAL SYMBOL FOR HYGIEA.

Although most likely based off a Caduceus, the character ☿ (U+2624 : CADUCEUS) is graphically a very poor match for ☿. A separate symbol is best.

15 One reference for this : [Asteroids by Yakshi](#).

16 For an example, here is an [Asteroid-Astrology specific web forum](#).

17 Examples : [YinYangAstrologer](#) and [Ουρανοκατέβητοι](#).

18 I could not find a manual for any version before v5, but one of my samples was produced by v4.15

19 [The Asteroid symbols page](#) at Wikimedia Commons shows the astronomical symbols.

20 There is a [symbols guide](#) at her website, and the [User Guide for Intrepid Astrology Software](#) attributes them symbols to her.

Sample 5.01

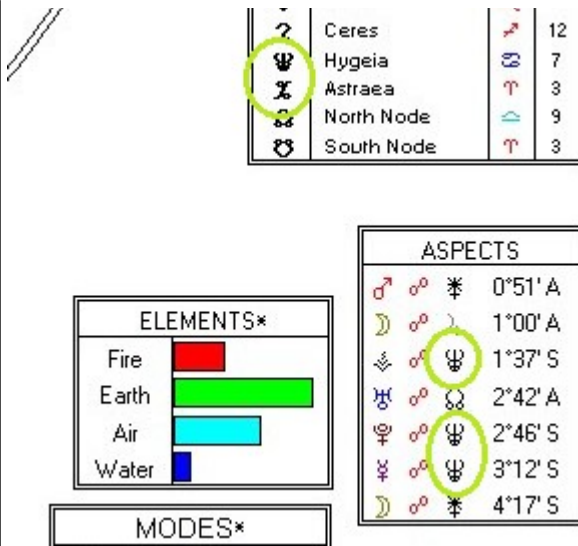

From: <https://alabe.com/sf7p2.htm>

Solar Fire is now at version 9, but the old page for version 7 is still up, and shows a snapshot of the selection box for the 36 standard points in that version of the program, including symbols for **Hygeia** and **Astraea** (circled in lime green).

Sample 5.02

From: <https://grandtrines.wordpress.com/2014/12/23/astrology-for-christmas-day-2014/>

The [Grandtrines Astrology Blog](https://grandtrines.wordpress.com/2014/12/23/astrology-for-christmas-day-2014/) is an exception to the usual in that it often posts *Solar Fire* chart images with extra data inserted. This example includes a listing with **Hygeia** and **Astraea**, as well as a listing of oppositions that includes **Hygeia** three times.

Sample 5.03

From: <https://grandtrines.wordpress.com/category/baddays/page/2/>

This particular chart has a listing of aspects that has **Astraea** 3 times. There are actually over 30 charts on the linked page, and all of them have **Hygeia** and **Astraea** on them.

This PDF includes a node report on Page 10 that was produced by Solar Fire v 4.15, back in 2001. **Astraea** and **Hygiea** are included.

6. Pholus and Nessus ☿☿☿☿☿ ☿ ☿☿☿☿☿☿

Orbiting between Jupiter and Neptune are a number of small, icy bodies known to astronomers as Centaurs. The first of these to be discovered (unless one counts 944 Hidalgo) was 2060 **Chiron** in 1977.²¹ Chiron (already encoded as ☿ U+26B7 : CHIRON) went on to become very popular in astrology, and remains more popular than other objects like Eris or Ceres.²²

Therefore, it is not surprising that during the 1990's, when astronomers began to discover additional objects orbiting between Jupiter and Neptune, and grouped them with Chiron into a new class of Minor Planets, that many astrologers became quite interested. Many of the named Centaurs have been given symbols and interpretations by various astrologers. Like the 'extra asteroids' proposed earlier, there are two standouts, the first two Centaurs discovered after Chiron, called **Pholus** and **Nessus**.²³

The usual symbols for Pholus and Nessus — ☿ and ☿ — were devised by German astrologer [Robert von Heeren](#), during the late 90's. There are a number of glyph variants around, like ☿☿☿☿☿ for Pholus, and ☿☿ for Nessus. However, before Robert von Heeren came along, some other symbols were devised. Melanie Reinhart devised ☿ for Nessus, and astrologer Zane Stein came up with ☿ for Pholus in 1994.²⁴ While I have found very few charts using ☿, there are two astrology programs that I know of, [What Watch](#) and [OpenAstro.org](#), that use ☿ as their standard symbol for Pholus. However, these programs do not seem to be very popular, so unless I am advised otherwise, I am not proposing a codepoint for ☿.

Sample 6.1

From: <http://www.astrosesam.ch/nessus.asp>

Pholus and Nessus from an embedded chart listing (produced, most likely, by [Astrosoft Happel's](#) Vision software).

21 The best summary is probably the Wikipedia Page : [Centaur \(minor planet\)](#).

22 A good example of this is the 'Current Planets' website widget provided by [Astrodienst](#), which includes 12 points total (including Chiron), and which can be found at many astrology sites.

23 Their 'standout' status is mostly deduced by looking at charts posted on the Internet. Chiron is everywhere. Pholus and Nessus are far more common than the remainder Centaurs.

24 This is taken from Zane Stein's page : [Thoughts on Centaur Symbols](#).

Sample 6.2

From: <https://www.appannie.com/apps/amazon-appstore/app/B00EO3N6AU#>

Part of a screenshot of the Android Aquarius2Go Astrology program.

Sample 6.3

From: <https://return2thesource.wordpress.com/2012/07/>

This sample shows the glyphs for Pholus and Nessus used by the *Solar Fire* astrology program. While they are seen internally in listings and tables, Solar Fire does not embed listings in charts, so these glyphs are very rarely seen in articles outside charts.

Sample 6.4

From: <http://www.astrologix.de/forum/ForumID9/2240.html>

Pholus and **Nessus** in a chart from the above page. It has to be noted that that chart has many unusual glyphs, but most of them I have not seen elsewhere (at least in a chart or listing). This chart is a product of [ZET astrology software](http://www.astrologix.de).

Icarus	♄	1	♊	40	
Apollo	♃	20	♋	51	Adara
Chiron	♄ _R	23	♊	54	
Alois	♁	10	♊	51	
Pholus	♁ _R	8	♋	58	
Nessus	♁ _R	15	♊	45	
Chariklo	♁	14	♋	25	
Eris	♁ _R	21	♋	58	
Varuna	♁	21	♋	1	Adara
Orcus	♁	0	♋	16	Regulus
	♁	28	♊	52	Betelgeuse

Sample 6.5

From: <http://www.astrologix.de/forum/ForumID9/2580.html>

Another listing, most likely also produced by the Vision software (most of the charts with Pholus and Nessus listings I could find on the Internet seem to be produced by this software).

☽	♊	25	03	R
☿	♈	16	08	
♀	♊	8	12	R
♁	♈	15	20	
♃	♈	15	36

♃	28°34'	♈
♄	14°56'	♈ _R
♅	09°53'	♈
♆	13°11'	♈

7. Black Moon Lilith and White Moon Selena (in Russia) † ‡ ⌘

The astrological point known as *Black Moon Lilith* is generally defined as the apogee of the Moon's orbit around the Earth, and sometimes as the position of the second focus of the Moon's elliptical orbit.²⁵ The most commonly used symbol for this point, ♁, is already encoded in Unicode (as U+26B8 : BLACK MOON LILITH), and is widely used in Russia.

During the 1980's, the highly influential Russian astrologer Pavel Globa invented a point to serve as the symbolic/thematic opposite of Black Moon Lilith. Known as **белая Луна (White Moon)** or **Селена (Selena)**,²⁶ it seems to be as common (perhaps slightly more so) as the 'Astrological Planet' Proserpina. The usual symbol for this point is ‡. Globa defined this point as a 'Hypothetical' circling the Zodiac in exactly 7 years.

There are, however, complications that lead to extra symbols. Apsidal precession means that the major axis of the orbit of the moon around Earth completes a full rotation every 8.85 years,²⁷ and it is this fact that is used to calculate 'Mean' Black Moon Lilith. However, the orbit of the Moon is somewhat wobbly, perturbed by the Sun (and to a lesser extent, by other bodies). A 'corrected' version was developed and used by some, but later, computers allowed the development of a 'True' or 'Osculating' Black Moon Lilith, calculating an ellipse and apogee based on the position and velocity of the moon at a given moment.²⁸

Since astrologers had already gotten used to the 'Mean' version, and believed in it, some of them ended up using two or three versions of Black Moon Lilith at the same time.²⁹ In Russia, most astrology programs use only ♁, but the popular [ZET astrology program](#) uses ♁ for Mean Black Moon Lilith, and a different symbol, †, for True Black Moon Lilith (also called Druj).³⁰ This symbol can sometimes be found outside ZET. The proposed name for † is **BLACK DIAMOND ON CROSS** because its use for True Black Moon Lilith is not very widespread, and naming it as such would be confusing to astrologers outside Russia.

In addition, the complication of multiple versions has spread to White Moon Selena. In the 1990's, the astrologer Albert Timashev came up with a way of calculating two positions for White Moon Selena (or, as he called it, *Arta*) using the position of Black Moon Lilith and the 'orbit of the sun' (actually the orbit of the earth).³¹

25 A definition thankfully lacking in heavy mythology or mysticism : [Mean & True Black Moon Lilith](#).

26 Albert Timashev has a [history page](#) which acknowledges Pavel Globa as the inventor.

27 Once source for this: [Lunar precession explained](#).

28 [The Black Moon Apogee and its Variants](#) is one article describing these. Like some others, the author is scornful of the 'corrected' version.

29 This seems to be most common in France. The charts in this article [Que disent les astres de la mort ?](#) are examples.

30 I had to download and install *ZET Lite* to confirm the identity of this symbol.

31 A reference is the [Белая Луна](#) page at [Астрокот](#).

The astrology program ZET supports all 3 of these points using different symbols, using ♁ for the Globa version,³² ♃ for Timashev's version (calculated using *Mean Black Moon Lilith*), and ♃ for Timashev's 'True Light Moon' (calculated using *True Black Moon Lilith*).³³

While ♃ seems to be the rarest symbol, and (unless I am told otherwise) I will not propose it for encoding, the two symbols ♃ and ♁ are quite common in ZET-produced charts found on the web, and are sometimes even found, contrastingly, on the same charts, with listings.

Sample 7.01

образом:

$$\textcircled{\text{♀}} = \textcircled{\text{♁}} + 7/4(\textcircled{\text{♁}} - \textcircled{\text{♀}} + 180^\circ)$$

Обратим внимание, что эта формула дает положение Бл

This rather old page (last revised 1998) shows how Albert Timashev calculates the position of his 'True White Moon' ♀ using 'True' Black Moon Lilith ♁.

Sample 7.20

From: <http://alteracion.ru/wp-content/uploads/2014/09/%D1%84%D0%B4.png>

Finally, a sample including White Moon Selena from another Russian astrology program, [AstroFD](#).

7. Black Moon Lilith (again) and Priapus € ‡

As mentioned before, the most commonly used symbol for Black Moon Lilith, € , is already encoded in Unicode. Other symbols for Black Moon Lilith can be found in German, Dutch, and sometimes French astrology software, like black crescents ☾,³⁴ or a script L ℒ.³⁵ However, black crescents could be considered a glyph variation of € , and ℒ could be considered a variant of ℒ U+2112 : SCRIPT CAPITAL L. So once again, unless the UTC advises otherwise, I will not be proposing these other symbols for Black Moon Lilith.

Most of the time, when more than one version of Lilith (Mean, Corrected, or True) is used at the same time, subscripts (like €_m €_c €_v) are used to distinguish them.³⁶ I earlier came across a claim that a reversed Black Moon Lilith ‡ is used for True Black Moon Lilith, but after coming across charts which contain ‡_m ‡_c ‡_v, I conclude this is not actually the case (except for charts which contain both € and ‡).³⁷

I have already covered the exception, found in ZET, of using € and ‡. There is one other exception. The most widespread astrology program of Dutch origin is [Astrolab](#), which uses € for Mean Black Moon Lilith, and € for 'Corrected' (*Gecorrigeerde*) Black Moon Lilith. A different Dutch Astrology program, [Astroscoop](#), uses reversed versions of the above symbols. I am proposing that € be encoded with the character name **BLACK CRESCENT WITH BAR** since (as in the case of ‡), people outside the Netherlands are unlikely to recognize it as a symbol for the Corrected Black Moon.

Astrolab, in fact, often uses some points that are rarely known elsewhere. In addition to the Black Sun ● (can be unified with U+1F789 : EXTREMELY HEAVY WHITE CIRCLE) and it's opposite , the Diamond³⁸ (unifiable with several diamond-shaped characters), *Astrolab* also routinely uses a point known as Priapus, with the symbol ‡.

The astrological point known as **Priapus** is defined as the perigee of the Moon's orbit around the Earth, the opposite of Black Moon Lilith.³⁹ It is used far less commonly than Black Moon Lilith, and although the symbol ‡ is known in English-speaking astrology (and astrology programs list Priapus as a point they can chart⁴⁰), *Astrolab* seems to be the only place where it is common enough for me to find on charts published on the Internet.

It should be noted that ‡ is not the only symbol for Priapus, however. Some German-language programs use a black crescent with an arrow for Priapus, the most popular of these being [Astrocontact's](#)

34 Examples: charts on this page : [Trintignant und Cantat](#), [Astrozrcadlení](#), and the [Jupiter9 blog](#).

35 Examples: this [Horoskop für Justin Bieber](#) and the [Aquarius2Go](#) astrology program.

36 An example of this is in the page [Astro Couleurs](#).

37 Charts linked from [this forum thread](#) contain examples of all of these cases.

38 See the definition at [AstroWiki](#).

39 See the definition at [AstroWiki](#).

40 An example, this [description of the features of Sirius 2.0](#) mentions Priapus in item 34.

[Astroplus](#), which uses ☾.⁴¹ I have only managed to find one sample (outside of chart wheels) for this symbol however⁴², and so I am not currently proposing this symbol as a character.

An additional complication from *Astrolab* is that sometimes, two versions of ♁ (U+260A : ASCENDING NODE) are used, one of them with a small ‘T’ inside. The nodes are points related to the orbit of the moon, and the ♁ version of the ascending node symbol indicates it is a ‘True’ version, analogous to the ‘True’ Black Moon Lilith. This glyph can be seen in many places (and also ☾), but *Astrolab* is the only place where I have seen both ♁ and ♁ used on the same charts. The difference between the two is always less than 2° in position,⁴³ and so most astrologers seem to feel the difference is not important. Thus, ♁ and ♁ could be regarded almost as glyph variants (except in *Astrolab*), and unless the UTC advises otherwise, I will not be proposing ♁.

Sample 7.01

From: <http://www.astrolab.nl/info.html>

The home page for *Astrolab* contains a single chart, which includes ☾ (true Black Moon Lilith) and ♃ (Priapus).

Sample 7.02

From: <http://art-astrologie.blogspot.ca/>

The *Art & Astrologie* blog is no longer updated, but for most of its history, the charts it posted were produced by *Astrolab* (and then modified). Here is an example of Priapus.

41 Another German-language astrology program, [Sarastro](#), uses a [different black crescent with arrow glyph](#). [Galiastro](#) (from the same company) uses what looks like a [fusion of a rotated Mars symbol and a black crescent](#).

42 This being an image inside a [thread at the German-language Astrologix forum](#).

43 A brief explanation of this is found here : [The Moon's True North Node](#).

Sample 7.03

From: <http://art-astrologie.blogspot.ca/2009/07/horoscoop-remco-campert.html>

♄ 11°19'50" T 03°49'33"
 ♀ 00°07'58" ♀ 11°58'52"
 ☽ 18°22'22" ☽ 21°46'46"
 ☾ 17°13'17" ☾ 16°58'59"
 ☾ 07°29'42" ♀ 27°11'35" Z
 ☾ 17°39'13" ♀ 22°17'05" Z
 ♄ 14°12'47" ☾ 14°42'52"
 ♀ 03°16'18" ♀ 15°18'20"
 ♃ 12°42'17" T 03°38'51"

An earlier chart from Art & Astrologie, which includes the ☾ version of corrected Black Moon Lilith, but not Priapus.

Sample 7.04

From: <http://www.astrologyweekly.com/learn-astrology/astrology-glyphs.php>

The English-language website *Astrology Weekly* has a guide to astrology glyphs that included Priapus, demonstrating that the symbol is not limited to Astrolab.

- ♄ POlar Ascendant
- ♄ Galactic Center
- ♄ East Point
- ♄ Vertex
- ♄ Vernal Point
- ☾ Black Moon
- ♄ Black Sun
- ♄ Priapus

Glyphs of hypothetical planets

- ♄ Vulcan
- ♄ Cupido
- ♄ Hades
- ♄ Zeus

Sample 7.05

From: [http://www.schors.nl/index.php?core\[page\]=1&catalog\[view\]=detail&catalog\[product\]=524](http://www.schors.nl/index.php?core[page]=1&catalog[view]=detail&catalog[product]=524)

Crieterion								
Zwarte maan				*				
Ceres								
Pallas	♂	♂	△	△	△	□		
Juno				*	□			
Vesta	□			□			♂	
Gec. zw. maan	♂	□	□				△	♂
Pars Fortunae	△			△			♂	
Nacht Pars	♂	△	*	△	△	♂	□	
Ascendant					*			

The Dutch astrology program *Astroscoop* uses a reversed version ☾ for the *Gecorrigeerde* Black Moon

Sample 7.06

From: <http://www.zwarte-maan.nl/horoscooppaginas/horoscoop-frederikdeklerk.htm>

The website [Astrologie, Zwarte Lichten, Enneagram](#) probably has more *Astrolab* charts posted in it than the rest of the Internet combined. Here is part of the listing from a typical chart.

♁	25°14'27"	♁	r	23°15'22"	
♁	08°47'57"	♁	r	23°09'22"	Z
♁	09°17'34"	♁	r	23°07'21"	Z
☾	07°48'12"	♁		07°49'15"	Z
☾	03°41'04"	♁		01°27'55"	Z 5.12
♁	08°47'57"	♁	r	23°09'22"	
♁	00°16'25"	♁		11°34'20"	Z
♀	07°48'12"	♁		03°05'49"	
♁	11°51'17"	♁		22°55'09"	
♁	11°51'17"	♁		22°55'09"	Z
♁	08°12'29"	♁		21°41'01"	Z
♁	05°36'52"	♁		13°23'54"	

Sample 7.07

From: <http://www.zwarte-maan.nl/horoscooppaginas/horoscoop-prinsesmaxima.htm>

The page for an astrological analysis of (then Princess) [Máxima Zorreguieta Cerruti](#) includes an aspect grid.

Sample 7.08

From: <http://www.wanttoknow.nl/hoofdartikelen/astrologisch-jaaroverzicht-2012/>

Part of a chart from a 'Year in Review' article. It should be noted here that the listing is cut off in the chart, which is very common for *Astrolab* charts published on the web.

♁	00°25'44"	♁		10°28'09"	
♁	28°17'22"	♁		08°36'10"	Z
♁	00°50'37"	♁		00°19'40"	Z
♁	28°53'20"	♁		12°22'18"	Z
♁	07°19'25"	♁		19°19'24"	Z
♁	12°58'46"	♁	R	22°21'12"	Z
♁	13°58'23"	♁	R	22°28'30"	Z
♁	01°41'55"	♁		15°15'01"	
♁	10°12'40"	♁	R	14°52'45"	
♁	01°54'08"	♁		05°39'31"	7

Sample 7.09

From: <http://www.nieuwetijdskind.com/ster-tetraeder-davidster-vernieuwing-2-0/>

♄	11°55'19"	♄ _R	04°02'51"
♅	03°59'05"	♅ _R	10°41'08" Z
♆	09°08'49"	♆ _R	20°02'03" Z
♇	11°01'42"	♇ _R	15°08'02" Z
♈	10°05'25"	♈ _D	14°50'26" Z
♉	08°41'38"	♉	18°48'32"
♊	20°26'18"	♊ _R	21°52'52"
♋	11°50'29"	♋ _R	02°02'31" Z

Part of a chart about an astrological arrangement of planets. It is another example where the listing is cut off. Priapus is in the chart wheel, but not the listing.

Sample 7.10

From: <http://www.zwarte-maan.nl/horoscooppaginas/horoscoop-jac-p-thijsse.htm>

24111904	♅	♄	♅	00°12'	24111904	♆	♄	♆	00°37'
24111904	♆	♄	♆	00°37'	24111904	♇	♄	♇	00°02'
24111904	♇	♄	♇	00°44'	24111904	♈	♄	♈	01°51'
24111904	♈	♄	♈	00°47'	24111904	♉	♄	♉	01°06'
24111904	♉	♄	♉	00°24'	24111904	♊	♄	♊	00°15'
24111904	♊	♄	♊	00°24'	24111904	♋	♄	♋	01°28'
24111904	♋	♄	♋	01°25'	24111904	♌	♄	♌	00°34'
24111904	♌	♄	♌	01°25'	24111904	♍	♄	♍	00°34'

An *Astrolab*-produced listing of transits (Here, it is simply a listing of aspects for several days. for this part of the listing, all of the aspects are for Nov 24, 1904).

Sample 7.11

From: <http://www.inzichten.com/artikelen/astrologie-artikelen/bronvermelding-de-bijzondere-eclipsen-van-september-2015.html>

♆	12°58'37"	♆	21°00'50" Z
♇	00°38'01"	♇ _R	00°15'07" Z
♈	01°00'53"	♈ _S	00°24'13" Z
♉	03°45'24"	♉	01°14'07" Z
♊	04°40'23"	♊	01°51'25" Z
♋	18°29'25"	♋ _R	00°11'29" Z

Showing another cut-off *Astrolab* chart from yet another astrology website, [Inzichten.com](http://www.inzichten.com).

Sample 7.12

From: <http://www.zwarte-maan.nl/horoscooppaginas/horoscoop-sylviamillecam.htm>

♄	02°17'41"	♈	♃	28°15'01"	♁	♃	29°24'10"	♄	♄
E	26°19'43"	♈	♃	10°59'39"	♃	♃	09°41'15"	♃	♄
☾	13°33'43"	♈	♃	12°17'38"	♈	♃	10°48'10"	♃	♃
♀	13°33'43"	♁	♃	12°11'58"	♁	♃	12°11'58"	♈	♃
Ac	06°59'40"	♈	♃	15°06'22"	♄	♃	28°15'36"	♃	♃
V	16°38'35"	♈							

01.01.1999	♃	♃	♃	12.01.1999	♃	♃	Ac	28.01.1999	♃	♃	♃
29.01.1999	♃	♃	♃	01.04.1999	♃	♃	E	22.04.1999	♃	♃	♃
22.04.1999	♃	♃	♃	09.05.1999	♃	♃	♃	09.05.1999	♃	♃	♀
31.05.1999	♃	♃	♃	14.06.1999	♃	♃	♃	01.07.1999	♃	♃	♃
15.07.1999	Ac	♃	♃	28.07.1999	♃	♃	♃	18.08.1999	♃	♃	♃

A final example from *Astrologie, Zwarte Lichten, Enneagram*, showing examples of ♃ and ♀ inside a position and aspect listing, the page is for Dutch actress [Sylvia Millecam](#).

**ISO/IEC JTC 1/SC 2/WG 2
PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS
FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC 10646⁴⁴.**

Please fill all the sections A, B and C below.

Please read Principles and Procedures Document (P & P) from <http://std.dkuug.dk/JTC1/SC2/WG2/docs/principles.html> for guidelines and details before filling this form.

Please ensure you are using the latest Form from <http://std.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html>.

See also <http://std.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html> for latest Roadmaps.

A. Administrative

1. **Title:** Additional Symbols for Astrology

2. Requester's name: David Faulks

3. Requester type (Member body/Liaison/Individual contribution): Individual contribution

4. Submission date: April 15, 2016

5. Requester's reference (if applicable): _____

6. Choose one of the following:

This is a complete proposal: YES

(or) More information will be provided later: _____

B. Technical – General

1. Choose one of the following:

a. This proposal is for a new script (set of characters): NO

Proposed name of script: _____

b. The proposal is for addition of character(s) to an existing block: YES

Name of the existing block: Miscellaneous Symbols and Arrows

2. Number of characters in proposal: 13

3. Proposed category (select one from below - see section 2.2 of P&P document):

A-Contemporary <input type="checkbox"/>	B.1-Specialized (small collection) <input checked="" type="checkbox"/>	B.2-Specialized (large collection) <input type="checkbox"/>	
C-Major extinct <input type="checkbox"/>	D-Attested extinct <input type="checkbox"/>	E-Minor extinct <input type="checkbox"/>	
F-Archaic Hieroglyphic or Ideographic <input type="checkbox"/>	G-Obscure or questionable usage symbols <input type="checkbox"/>		

4. Is a repertoire including character names provided? YES

a. If YES, are the names in accordance with the “character naming guidelines” in Annex L of P&P document? YES

b. Are the character shapes attached in a legible form suitable for review? YES

5. Fonts related:

a. Who will provide the appropriate computerized font to the Project Editor of 10646 for publishing the standard? The requester (David Faulks).

b. Identify the party granting a license for use of the font by the editors (include address, e-mail, ftp-site, etc.): David Faulks (davidj_faulks@yahoo.com)

6. References:

a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? YES

b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached? YES

7. Special encoding issues:

Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)? NO

8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see Unicode Character Database (<http://www.unicode.org/reports/tr44/>) and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

⁴⁴ Form number: N4502-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05, 2009-11, 2011-03, 2012-01)

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? If YES explain	<i>NO</i>
2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? If YES, with whom? If YES, available relevant documents:	<i>NO</i>
3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? Reference:	<i>NO</i> <i>vague information can be deduced via search results.</i>
4. The context of use for the proposed characters (type of use; common or rare) Reference:	<i>rare</i>
5. Are the proposed characters in current use by the user community? If YES, where? Reference:	<i>YES</i> <i>see examples of use, all produced in the past 20 years</i>
6. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP? If YES, is a rationale provided? If YES, reference:	<i>NO</i>
7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?	<i>YES</i>
8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>NO</i>
9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>NO</i>
10. Can any of the proposed character(s) be considered to be similar (in appearance or function) to, or could be confused with, an existing character? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>YES</i> <i>YES</i> <i>see the discussions in the individual sections</i>
11. Does the proposal include use of combining characters and/or use of composite sequences? If YES, is a rationale for such use provided? If YES, reference: Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided? If YES, reference:	<i>NO</i>
12. Does the proposal contain characters with any special properties such as control function or similar semantics? If YES, describe in detail (include attachment if necessary)	<i>NO</i>
13. Does the proposal contain any Ideographic compatibility characters? If YES, are the equivalent corresponding unified ideographic characters identified? If YES, reference:	<i>NO</i>
