Doc Type: Working Group Document**Title:** Towards an encoding of the Loma script in the SMP of the UCS**Source:** UC Berkeley Script Encoding Initiative (Universal Scripts Project)**Author:** Michael Everson**Status:** Liaison Contribution**Action:** For consideration by JTC1/SC2/WG2 and UTC**Date:** 2017-01-19**Replaces:** N3756 (L2/10-005), N4735 (L2/16-201), N4779R (2017-01-01)

1. Update. This document updates and replaces N4779R. It contains comparative charts of four modern Loma syllabaries (Foromo Guilavogui n.d. (Fig. 4), Péma Toupou et al. s.d. (Fig. 5), Justin Koïvogui 1993 (Fig. 6), and Balla Traore 2009 (Fig. 7). At the end of the document, code charts based on these four repertoires are given, with rough fonts based on those sources. Following these, a consolidated code chart is given, which prefers the glyphs from Koïvogui and fills in gaps from the others. The four source documents are quite different from one another; Traore 2009 appears to have been based on Koïvogui 1993.

This document updates the previous document by adding in additional tables of characters from modern use. It also presents a plain-text listing of the characters in the three sources which we have, in the Latin transcription used in those sources (Figures 4f, 5n, 6f, and 7g). Those Latin transcriptions differ in various ways, and the relationship between those transcriptions and either the IPA or modern Latin orthographic standards in Guinea remains to be worked out. More expert input is required, in particular, a transcription of the Loma text in many of the illustrations here to modern Loma Latin orthography would assist in identifying the values of the letters. Fonts are also required.

Discussions of Loma encoding began back in 2010, but it has taken some time to make contact and work with the user community. There are people actively using Loma today—but it is as yet uncertain what the relation of their work is with the analyses made by David Dalby in 1967, which owed much to the descriptions made by Joseph Joffre in 1943 and 1945.

Essentially there are two issues: one, the glyph shapes, which show variation in 1943–1967, but which differ in many particulars in images available today. The other issue is the repertoire, both in terms of identification of the vocalic and consonantal readings of the characters, and in terms of the completeness of the syllabic matrix.

Research continues, but there are serious needs to be met. We really need is an authoritative and complete modern description of the writing system and how it is applied to the syllables of Loma. Are there standard spellings? Books for children? We will eventually need to know whether Joffre's texts are accurate, as Dalby's are based on those. We need to understand the glyph structure (ductus and form) of the modern script, and map it, if not to Dalby or Joffre's charts, to original early documents (dating to the 1930s and 1940s), if these can be transcribed into Loma Latin text and translated. We need to know the

size of the corpus, at least better than we do now. We need to know if we need to support older forms of the syllabary, or if the modern form in use is sufficient.

FIG. 3.—NATIVE WRITING (TOMA ALPHABET).

FIG. 4.—NATIVE WRITING (TOMA ALPHABET).

A NEW WEST AFRICAN ALPHABET: USED BY THE TOMA, FRENCH GUINEA AND LIBERIA.

85 The Toma (Loma) inhabit in French Guinea the south of the Cercle de Macenta, a small western portion of that of Nzérékore and the adjoining parts of Liberia. They speak a Sudanic language of the Mande subdivision, and of the Mande-Fu group.

1. HISTORICAL

I discovered recently among them a syllabic script which, in spite of a few similarities, seems perfectly distinct from both the Vai and the Mende systems, the last of them known to me through an original source. Besides, the Mende reads from right to left, both the Vai and the Toma from left to right.

The informants I was able to question explained to me the principal discoverer of the

script was a certain Wido Zogbo, of the village of Bwékéta, Liberia, and a labourer in the Fire-stone Company, an American firm. Being in his village, say the natives, Wido decided to go to Dulukôlô to buy some thread. After shopping he returned home and gave the thread to his friend Mariba to have it woven. Then in his home, such ideas visited him : 'God takes he no pity on the Tomas ? Other races know writing. Only the Tomas remain in their ignorance.' God answered him : 'I fear that when you are able to express yourselves you shall have no more respect for the beliefs and customs of your race.' 'Not at all,' answered Wido, 'we shall still keep living as in past days. I promise it.' 'If such is the case,' said God, 'I am willing to grant you the knowledge, but take care never to

Figure 1c. Samples of Loma text from Joffre 1943.

FIG. 5.—NATIVE WRITING (TOMA ALPHABET).

'show anything of it to a woman.' Then Wido with the aid of Mariba, invented the script.

Somewhat divergent versions say nothing of the sentence excluding the women from knowledge. On the contrary, they mention that a woman, together with the two men, took part in the initial invention, and one of my informants even affirms he was himself acquainted with the three persons. All the foregoing must have taken place only about ten years ago and to-day the script, they say, is fairly propagated among the Toma labourers of the Firestone Company : the headmen employ that script to write down the lists of their men, and before learning it the pupil must swear that, in his turn, he will teach the system to anybody who shall ask it of him.

2. THE SYSTEM

The form of the signs seems highly variable, and they have frequently their orientation modified (up to 90 or even 180 degrees). I think nevertheless that I have collected nearly all the known signs. The phonetic value of some of them will have to be verified, but is already sure for an overwhelming number.

The phonetic transcription is of course rather unsatisfactory, as the endeavours of Th. Monod to

FIG. 6.—SOME SIGNS COMMON TO VAI, MENDI, OR TOMA ALPHABETS.

Figure 1d. Text and comparison table of Loma syllables from Joffre 1943. A transcription of the text at the top right is found in Figure 1f on p. 7 below.

Nos. 85, 86]

MAN

interpret my drafts must often have been something of a mere guess-work. The results are nevertheless given as they now stand, the present note being in fact only a preliminary one, to stimulate further researches. I hope myself to be able some day to give a more detailed study of the Toma alphabet.

In the written texts the words are separated by little crosses.
JOSEPH JOFFRE.

Macenta (French Guinea)

APPENDIX

A first glance at the three scripts of the Vai, the Mende, and the Toma, reveals at once a strong 'air de famille.' Few signs, however, are common to the three systems, but many are found in two of them, chiefly Mende-Toma or Toma-Vai, none perhaps being special to the couple Mende-Vai. It seems difficult to hold that the three systems were always thoroughly separated and that resemblances can only result from mere convergences. Mende might be like a very distant echo of the Vai—and possibly of an already deformed and corrupted Vai—to which it had added its own accretions. And Toma would have profited, more or less directly, by some elements at least borrowed from the two previously developed systems. Chronology does not seem to contradict such an hypothesis. The original part of each system seems however to remain the most important. Contact with

FIG. 5. POSSIBLE RELATIONS OF VAI, MENDE, AND TOMA ALPHABETS

neighbouring scripts may have worked more often, perhaps, as a stimulus to original developments, than through direct borrowings.

The geographical grouping is to be noted. And nothing proves that the list of these libero-guinean scripts is already exhausted¹: thus the possibility of the existence of a Gerze alphabet (French Guinea) is not excluded and awaits confirmation.

THÉODORE MONOD.
