A Google Trends comparison of existing tool emojis reveals that “axe” by far outranks “pickaxe”.

It is comparable in popularity to the “wrench” tool emoji. In both instances, its popularity has remained steady over time.

Multiple Usages

The axe is first and foremost a tool, used for felling trees and shaping wood. It has also been adopted as a weapon, such as the Native American tomahawk, Viking battle axe, etc.

Colloquially, it is used to indicate a destructive or negative action. For example, when someone has been fired, i.e. “Patrick was axed in the latest round of layoffs.” Or, “Let’s axe that feature.” 4 Both of these uses allude to the traditional use of a large axe in executions.5

Culturally, the axe symbolizes self-reliance, outdoorsmanship, and toughness. Its emerging use as a decoration suggests it has become an icon of “off the grid” lifestyle ideals, particularly among millennials.⁷

Use in Sequences

The axe could be combined with “woman” or “man” to depict a logger or lumberjack. The axe could be combined with “hammer” (similar to “hammer and pick”).

Breaking New Ground

There is currently no other emoji that depicts a logging or woodworking tool.

C. Image Distinctiveness

An axe emoji would be distinct from its nearest relatives, the “hammer” and “pick” emojis, because it is usually depicted with a single cutting edge. The pick, or pickaxe, as it is typically depicted, does have a blade, but it is horizontal. A pick is almost never used for woodworking, only for tilling the earth or chiseling away at rock (mining).

D. Completeness

The axe emoji would help round out the “tool” emoji category, which, with the exception of “hammer,” does not include any woodworking tools.

E. Frequency Requested

Twitter searches indicate a steady demand for an axe emoji.
Selection Factors Exclusion

F. Overly Specific
There are many different varieties of axes (hatchet, adze, maul, etc), but they all serve a similar function, for cutting wood. They share a similar iconic form that can be easily captured with a single glyph.

G. Open-ended
No, this is an addition to the current tool category.

H. Already Representable
The axe is not well-represented by any other emoji. The closest analogues are “pick”, “knife, and “sword”.

I. Logos, Brands, UI Icons, Signage, Specific People, Deities
No, the axe is an iconic tool independent of any specific logo, religion, or other usage.

J. Transient
The axe is the first tool made by humans. It is not likely to fall out of use as a symbol of logging, woodworking, and general outdoorsmanship.

K. Faulty Comparison
No, although more tools (drill, saw, chisel, shovel) could certainly be added to the “Tools” category.
