

# Unspecified-Gender Census

Mark Davis, 2018-07-17

I did a census of the gendered forms in order to scope out the number of current and potential unspecified-gender forms. This is a background document, not a formal proposal.

The text is using the term “unspecified-gender”. The emoji images need to avoid physical characteristics that are commonly associated with specific genders, but the term is also intended to include usage for “gender-inclusive”, “gender-neutral”, “gender-ambiguous”, “non-gendered”, “non-gendered”, and so on. The counts also include the few missing male or female forms (in special groups), not just unspecified-gender.

It appears that adding unspecified-gender variants (and missing male/female forms) of most human-form emoji would be from 538 to 626 additional emoji images in each emoji font (eg on every phone, etc.). The range of numbers is explained below.

Note: the frequency of use of the current non-gendered forms is very low, each at about 2% or less than that of the average emoji. So this is just setting out what the full story would look like so that we can make informed decisions on any incremental changes we’d want to make now.

The cost in terms of images does not include the costs of adding skin tones to groups (such as the family: person & person & child & child), however. That would expand the costs of some of the items below by a considerable number. That number is only “considerable” if either all or none of a group are unspecified-gender: allowing cases like (family: man, person, child, child) would add a *very* large number of images.

## 1. Unpaired characters (48)

We could add recommended neutral forms for the chief missing ones along the following lines:

Code Point	E	Name	Neutral form (if gendered)	Option	Cost
\x{1F472}		man with Chinese cap	currently single gender	make explicit neutral?	12
\x{1F9D5}	<input type="checkbox"/>	woman with headscarf	currently single gender	make explicit neutral?	12
\x{1F935}		man in tuxedo	currently single gender	make explicit neutral?	12
\x{1F470}		bride with veil	currently single gender	make explicit neutral?	12

The total costs are on the right.

Where these are treated like current neutrals, the neutral form would just fall back to one of the genders, and we would include the missing gender. That would be a cost of 24 = 4\*6 additional emoji images in fonts.

If true unspecified-gender images were added that would cost 24 additional images in fonts, including two forms plus neutral, that would be a total of 48 additional forms.

This list does not include forms like “man breast feeding” or “person breast feeding”, which would likely have much lower usage.

## 2. Small faces (14..64)

We have up to now categorized the following set of characters as having human figures that are too small or too obscured by clothing or props to effectively show gender.

1	\x{1F574}		man in suit levitating	skintones	2..12
2	\x{1F6C0}		person taking bath	skintones	2..12
3	\x{1F6CC}		person in bed	skintones	2..12
4	\x{1F3C7}		horse racing	skintones	2..12
5	\x{1F3C2}		snowboarder	skintones	2..12
6	\x{26F7}		skier	no skintones	2
7	\x{1F93A}		person fencing	no skintones	2
8	\x{1F3CE}		racing car	no skintones	0
9	\x{1F3CD}		motorcycle	no skintones	0

Numbers 6-9 are not marked in Unicode as allowing skintones. Numbers 8 and 9 don't have human figures on most platforms, and would be better moved to Transportation. This should be communicated to CLDR.

It would of course be possible to make 1-7 allow gender. Because 1-5 have such small details, fonts need not show skintones if the skin is obscured, and would just need 3 images for each for gender instead of 18. They would just need to have the [GSUB](#) tables to suppress the skin tone modifiers. Thus the number of new images required could be as few as  $2*7 = 12$  rather than 64.

Note: the “man in suit levitating” is already given gender by two major platforms (Twitter and Facebook).

### 3. Paired characters (6)

The following are paired characters. We'd added these early on for gender parity, before we had the “male/female sign” apparatus that we used later. We could use ZWJ sequences for the missing unspecified-gender form. Some trial forms are supplied below, using “crown” for GN prince/princess, “christmas tree” for GN Santa, and “musical notes” for dancer. (The last one is not terribly satisfactory; suggestions?)

The recommended formulations could appear in [Gender Appearance Mechanisms](#) in UTS #51 even if we don't add them to RGI, if we wanted.

Code Point	E	Name	Neutral form (if gendered)	Option	Cost
\x{1F934}		prince	<input type="checkbox"/> \u200D 	possible neutral form?	6
\x{1F478}		princess	<input type="checkbox"/> \u200D 	possible neutral form?	

\x{1F385}		Santa Claus	☐\u200D🎄	possible neutral form?	6
\x{1F936}		Mrs. Claus	☐\u200D🎄	possible neutral form?	
\x{1F483}		woman dancing	☐\u200D💃	possible neutral form?	6
\x{1F57A}		man dancing	☐\u200D💃	possible neutral form?	

(Side note: while Santa Claus is well above median frequency for emoji, Mrs. Claus is below median, and [Mx](#) Claus would be projected to be far below her.)

## 4. Special Groups (2..40)

Most groups like families already have ZWJ sequence forms for skin tones. Each man, woman, boy or girl can be replaced by the person or child respectively to generate a neutral form. However, there are two special groups that currently have neutral status:

These allow for gender choices, but the gender choice is either all male or all female. That is, a single ♀ turns both figures to female, and ♂ turns both to male.

	two people with bunny ears dancing
 ZWJ ♀	two women with bunny ears dancing
 ZWJ ♂	two men with bunny ears dancing

There is not currently a way to have one be male and one female. If we wanted to be able to have male+female we'd need to define a mechanism, like the following. That would also allow for separate skin tones for each. See [7. Skin tones](#).

 ZWJ ♂ ZWJ ♀	man and woman with bunny ears dancing	1..25
---	---------------------------------------	-------

The following groups are special. Each of the three is a single character. We anticipate adding a neutral “person standing” that could be used in a zwj sequence pair for a neutral form (and would also allow for separate skin-tones for the genders). In the list below, person+ZWJ+person is used as a stand in for the new sequence.

<p. standing>ZWJ<p. standing>	two people holding hands	1..15
-------------------------------	--------------------------	-------

## 5. Big list (392)

If we were to add unspecified-gender forms for all others, it would take 392 additions. Many of the sequences are not RGI and don't have names yet, so a simple concatenation with “ & ” is used.

Code points	Emoji	Name*
-------------	-------	-------

\x{1F9D1 1F3FB 200D 1F9B0}	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	person: light skin tone, red hair
