Peter G. Constable and Lorna A. Priest submitted L2/05-097 *Proposal to Encode Additional Latin Phonetic and Orthographic Characters* in 2005, and then they added the LATIN SMALL LETTER V WITH RIGHT HOOK in the revised version according to *Some Problems of Phonological Reconstruction in Central Sundanic* written by Didier Demolin and *The Phonetic Status of the Labial Flap* written by Kenneth S. Olson after several months. This character was accepted in UTC #104 [[104-C20](#)] and WG2 #48 [[M48.1](#)]. The code point is U+2C71, which is included in the block Latin Extended-C.

Now, *v* is included in the official International Phonetic Alphabet as a consonant as well, which was revised in 2015.

The IPA name for v (U+2C71) is “voiced labiodental flap” shown as above.

I request to clarify its IPA usage in the Code Charts, because it will be better for the font designers and the end users.

**Solution:**

1. Add an additional annotation for U+2C71 as below.

```
2C71    LATIN SMALL LETTER V WITH RIGHT HOOK
        * IPA: voiced labiodental flap
```

or

```
2C71    LATIN SMALL LETTER V WITH RIGHT HOOK
        * voiced labiodental flap
```

2. Add an annotation for the block IPA Extensions after U+03C7 as below.

```
→ 2C71 latin small letter v with right hook
```
