Subject: Mandaic KAD

Date: 10 January 2020

Mandaic KAD

1 Introduction. Mandaic is a cursive script, letters often merge and change slightly of shape. A common example would be the ligature 'k+d'; both the 'k' and the 'd' are knotted together to form the horizontale ligature kd.

This ligature is often used in classic Mandaic as non-joining ligature separtly or within a word, for example  in figure 2.

However, it appears also as a Right Joining character, for example the neo-Mandaic word  or the classic Mandaic  in figure 4.

A very close equivalant in typography is the Arabic 'lam+alif': which has two unicodes (Non joining ﻻ: U+FEFB) and (Right joining ﻻ: U+FEFC).

2 Non Joining Characters. According to Everson's proposal there are five Right-Joining and three Non-Joining characters in the Mandaic character set, which are shown (in table 1) below:

Table 1: Right Joining and Non Joining Characters

<i>Right-joining Mandaic Characters</i>		
Character	X_n	X_r
HALQA		
AZ		
IN		
AKSA		
ASH		
<i>Non-joining Mandaic Characters</i>		
Character	X_n	
DUSHENNA		
KAD		
AIN

Table 2: The current Unicode list of joining properties

# Mandaic Characters	
0840;	MANDAIC HALQA; R; No_Joining_Group
0841;	MANDAIC AB; D; No_Joining_Group
0842;	MANDAIC AG; D; No_Joining_Group
0843;	MANDAIC AD; D; No_Joining_Group
0844;	MANDAIC AH; D; No_Joining_Group
0845;	MANDAIC USHENNA; D; No_Joining_Group
0846;	MANDAIC AZ; R; No_Joining_Group
0847;	MANDAIC IT; R; No_Joining_Group
0848;	MANDAIC ATT; D; No_Joining_Group
0849;	MANDAIC AKSA; R; No_Joining_Group
084A;	MANDAIC AK; D; No_Joining_Group
084B;	MANDAIC AL; D; No_Joining_Group
084C;	MANDAIC AM; D; No_Joining_Group
084D;	MANDAIC AN; D; No_Joining_Group
084E;	MANDAIC AS; D; No_Joining_Group
084F;	MANDAIC IN; D; No_Joining_Group
0850;	MANDAIC AP; D; No_Joining_Group
0851;	MANDAIC ASZ; D; No_Joining_Group
0852;	MANDAIC AQ; D; No_Joining_Group
0853;	MANDAIC AR; D; No_Joining_Group
0854;	MANDAIC ASH; R; No_Joining_Group
0855;	MANDAIC AT; D; No_Joining_Group
0856;	MANDAIC DUSHENNA; U; No_Joining_Group
0857;	MANDAIC KAD; U; No_Joining_Group
0858;	MANDAIC AIN; U; No_Joining_Group

Following the process through the suggestion of R. Pournader's "Joining types for Mandaic" (L2/10-413) and the current list of joining properties at the web (table 2), it can be concluded, that Unicode decided to have this ligature as Non-Joining Mandaic character.

3 Right-Joining behaviour. In the following pages Mandaic manuscripts are presented to disapprove the Non-Joining behaviour of this character in the Mandaic block. The manuscripts provide clear evidence which indicate the Right-Joining behaviour of U+0857 in the Mandaic script.

U+0857

The ligature "kd", is the most used ligature in the mandaic text. This ligature is composed of two characters k (ܟ = U+084A) with d (ܕ = U+0856), unicode decided correctly to include it to the Mandaic unicode block, since the d changes slightly of shape when connects with k. However, this doesn't mean by giving this ligature a place in the unicode block, that it should be handled differently than usual! Usually, it should connect from the left exactly like the Mandaic k does, and from the right exactly like the Mandaic d does!

This is why it should be concluded that this ligature should become a right-joining character in the Mandaic unicode standard.

In figure 4 and 5, examples are shown from the Mandaean manuscripts, which provides clearly that this ligature is a right-joining character. Nevertheless, in spoken Neo-Mandaic there exist also more modern words as bkḏ (ܒܟܕ) and lkḏ (ܠܟܕ) (table 3), which Mandaeans nowadays use to communicate through their spoken language. And because of the prove (see Al-Sabti A., 2020) about the right joining d (U+0856), U+0857 should become a **Non-Joining** and a **Right-Joining** character.

Table 3: Classic and Neo-Mandaic list of the kd ligature

	Classic and Neo-Mandaic	transliteration	Unicode	Sources
Un-Joining kd	ܟܕ	kd	U0857	Figure 1
	ܕܟܕ	dkd	U0856 + U0857	Figure 2
	ܟܕܐ	kḏa	U0857 + U0840	Figure 3
Right Joining kd	ܟܕܐ	ukḏ	U0845 + U0857	Figure 4
	ܟܕܐܐ	ukḏa	U0845 + U0857 + U0840	Figure 5
	ܒܟܕ	bkḏ	U0841 + U0857	spoken Neo-Mandaic
	ܠܟܕ	lkḏ	U084B + U0857	spoken Neo-Mandaic

Figure 1 (RRC2M-1: 1675): k + d: کد

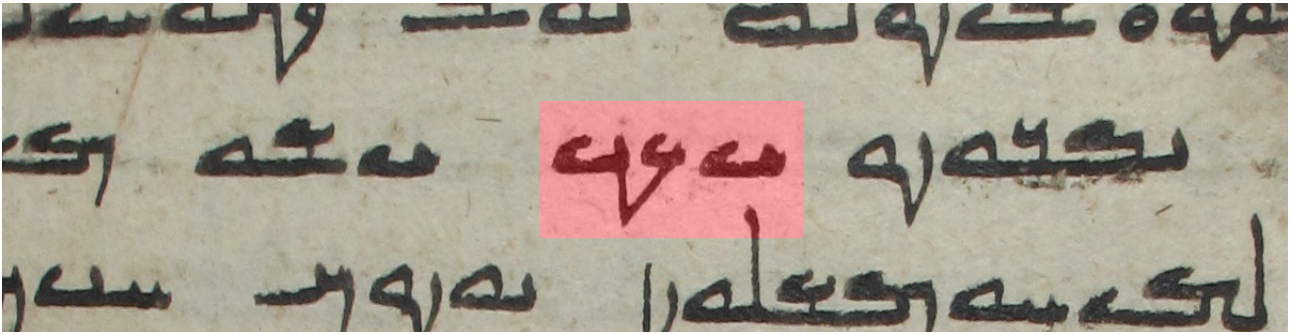

Figure 2 (DC30: 1753): d + kd: دک

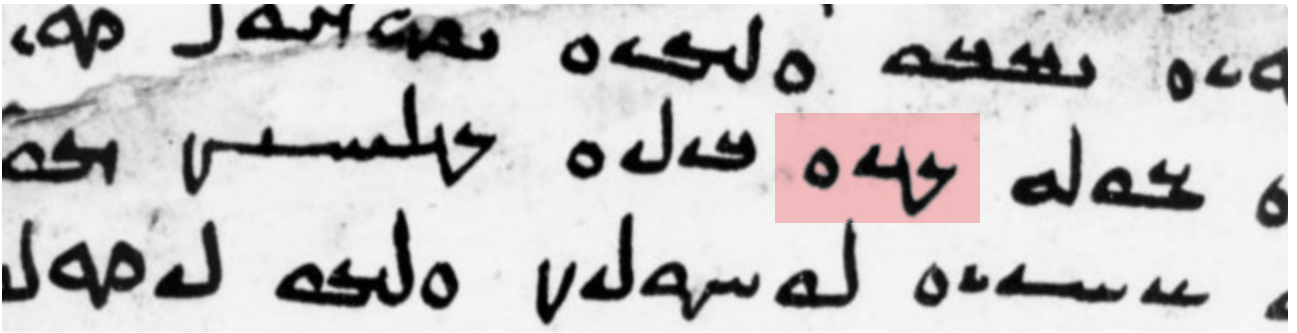

Figure 3 (S16: 1716): kd + a : کد ا

Figure 4 (RRC6D: 1674): u + kd: کد ا

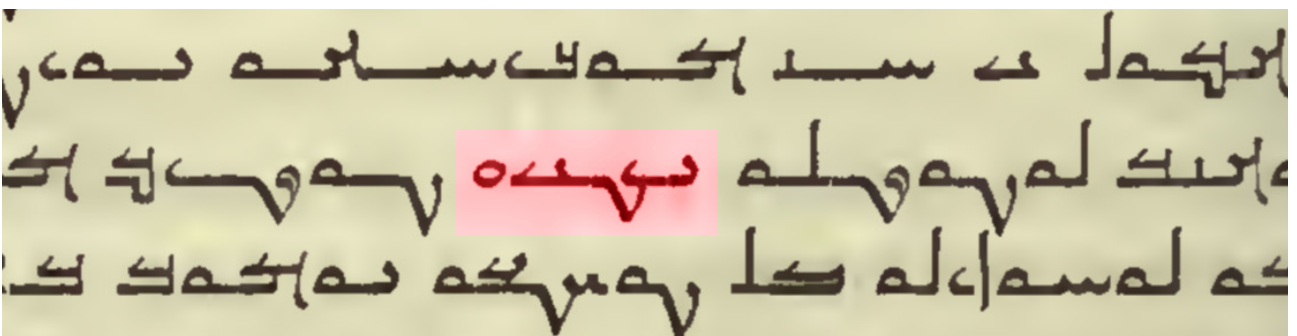

Figure 5 (Zotenberg 1874): u + kd + a : کد ا

4 Conclusion. All the Mandaic letters (*including Al-Sabti A., 2019 and 2020*) may join to other letters from the Right side. For this reason the Unicode Technical Committee must correct the joining properties of this ligature by changing the setting of the joining properties from U(njoining) to **R(ight-Joining)**. Please see the correction in (table 4):

Table 4: The correction of the Unicode list of joining properties

0857; MANDAIC KAD; R ; No_Joining_Group
--

The fixed result of the Unicode joining properties should count 0 U(njoining) Characters, 8 R(ight-Joining) Characters and 17 D(ual-Joining) Characters.
