At the UTC meeting 162, evidence for the base (origin) character of the newly proposed character (𐄂 (from [L2/19-381](#)) was requested (in [L2/20-046](#)):

The request from Japan for evidence showing the base character of HIRAGANA LETTER ARCHAIC WU is U+7D06 need not hold up encoding the character; that information can be added as an annotation later.

After some discussion with Jake Iannacone (classical Japanese researcher), we came to the conclusion that the origin character of U+1B11F (𐄂 is U+6C59 汙 (<https://kobunworld.blog.fc2.com/blog-entry-5.html>).

I recommend an annotation to U+1B11F be added: “derived from 6C59 汙”

That is all.
