Introduction

This is a proposal to encode the Nakaara Pollu in the Kannada script.

L2/13-228 by Shriramana Sharma documented the alternate form of vowelless NA ܍ and proposed it be handled with at font-level and using joiners to avoid conjunct formation. L2/20-084R proposed the atomic encoding of Nakaara Pollu in Telugu script with need for simultaneous representation of the both forms in plain text and was accepted at UTC meeting 163. Similarly, the analogous form ܍ is proposed for Kannada.

Old Style	<i>na + virama</i>	ಣ
	<i>na + virama + [ZWJ] + da</i>	ಣದ್
New Style	<i>na + virama</i>	ಣ

All Fonts	<i>na + virama + da</i>	ಣದ್

Unicode standard 13.0, Chapter 12, Section 12.8

Currently, the representation is font dependent and uses joiners to avoid conjunct formation. Based on the need for simultaneous rendering in plain text and simplifying rendering requirements, the atomic encoding of Nakaara Pollu is necessary. The justification for the atomic encoding is same as discussed in L2/20-084R.

Character details

Glyph	Code	Character name
ಣ	0CF0	KANNADA LETTER NAKAARA POLLU

Recommended annotation

- Special vowel-less form of NA
→ TELUGU LETTER NAKAARA POLLU

0CF0;KANNADA LETTER NAKAARA POLLU;Lo;0;L;;;;;N;;;;;

Since no special name is known for usage in Kannada as noted in L2/13-228 p.3, the Telugu term is re-used for the character name. 0CF0 is chosen to fill the hole. Nakaara Pollu should be treated as an equivalent to the Unicode sequence ಣ U+0CA8 U+0CCD for sorting and searching purposes. The Kannada chapter of the core specification must be modified accordingly.
