Proposal to Add First Residual Stroke Field to UAX #45

Proposal

With the addition of a total strokes field to the data in UAX #45, we now include fields for all the data that the IRG requires for submissions—with one exception. The IRG requires first residual stroke type (numbered 1 through 5), and there is no field in UAX #45 that captures that.

My recommendation is that we add a field to the data provided by USourceData.txt for the first residual stroke type. I would further recommend that we document in UAX #45 itself what the five stroke types are (see Annex K of the IRG Principles and Procedures document).
