

# Revised proposal to encode the Sidetic script in Unicode

Anshuman Pandey

pandey@umich.edu  
pandey.github.io/unicode

October 14, 2022

## 1 Introduction

This is a revised proposal to encode Sidetic in Unicode. It supersedes the following documents:

- L2/19-106: “Introducing the Sidetic Script”
- L2/21-111: “Preliminary proposal to encode the Sidetic script in Unicode”

The major changes to L2/21-111 include:

- Revision of proposed character repertoire to include all attested Sidetic letters, in order to enable complete representation of the extant corpus and to provide scholars working on the decipherment of the script with a means to represent all known characters
- Change of proposed character names from phonetic references to a serial numbering system used by scholars for identifying Sidetic letters, which eliminates the need to withhold from the encoding characters whose phonetic values have not yet been determined.
- Description of other letters used in Sidetic coinage, which are not included in the conventional scholarly repertoire (§ 4.1).

## 2 Background

Sidetic is a right-to-left alphabet that was used from the 5th through 2nd centuries BCE for writing a now-extinct Indo-European language of the Anatolian branch, which is also referred to by scholars as ‘Sidetic’ (ISO 639: *xsd*). The name ‘Side’ is borrowed from the Greek name of the ancient city where the language and script were used, that being ‘Σίδη’, located in the region of Pamphylia, on the southern coast of Anatolia on the Mediterranean.

The origins of Sidetic are not clearly known. Scholars believe that it developed from the Phoenician script in parallel with Greek. Some Sidetic letterforms resemble those found in Greek, as well as in Carian, Lycian, and Lydian, but differ in the assignment of sound values (see fig. 14). Sidetic has other letters not found

in these other scripts. The right-to-left orientation of Sidetic sets it apart from the normative left-to-right direction of Greek. The other Anatolian alphabets were also written from right-to-left, but could also be written left-to-right. Such variation is not observed for Sidetic in the available sources.

### 3 Attested Sources

The script is attested on numerous coins and inscriptions (some specimens are shown in fig. 1–6). The inscriptions prove that Sidetic is a true writing system, especially its distinctive representation alongside Greek in a few bilingual inscriptions.

S1	S I.1.1	Artemon bilingual from Side (1914)
S2	S I.1.2	Apollonios bilingual from Side (1949)
S3 & S4	S I.2.1-2	Strategos dedications from Side (1964)
S5	S II.1.1	Palimpsest bronze altar table or voting tablet (1969)
S6	S I.1.3	Euempolos bilingual from Lyrbe-Seleukia (1972)
S7	S I.2.3	Inscription on fragment of the rim of a pot (1982)
S8	S I.2.4	Inscription on stone Heraldes relief (1982)
S9	S I.2.5	A list of names, also interpreted as the “Athenodoros memorial” (six complete lines (and traces of two more lines) (1995)
S10	S III	5th century BC coins with around twenty different legends (since 19th century)
S11		Words possibly from Mnemon, a physician of Side (1983), who added notes in Sidetic to a Greek Hippocrates manuscript.
S12	S II.2.1	A steatite scarab, of uncertain provenance (“acquired in Turkey”); on its underside three (?) hardly identifiable signs have been carved, possibly Sidetic (2005)
S13	S I.2.6	Graffito from Lyrbe-Seleukia (2014)

### 4 Character Inventory

Scholars have identified at least 29 distinctive letters for Sidetic. While the script has not been fully deciphered, there is some consensus on the values of 26 letters. The remaining 3 letters are attested in coinage, and their values are unclear. Additional research of these is required.

Sidetic letters are traditionally referred to by scholars and arranged using serial numbers, eg. 1–29. This enumeration was developed by Bossert 1950 (fig. 8), then expanded by Brandenstein 1958 (fig. 9), Neuman 1978 (fig. 10), Woudhuizen 1985 (fig. 11), Nollé 2001 (fig. 12), and Rizza 2005 (fig. 13). The latest work by Rizza extended the number of characters to 29.

The arrangement of the repertoire has 5 vowel letters at the top, followed by 2 semi-vowels, then 19 known consonants. The last 3 letters are found on coinage and were added to the scholarly repertoire by Rizza (2005); the latter two may represent ligatures.

Variant forms of letters used in inscriptions are provided in the ‘variants’ column. Also provided are transliterated values of letters used by scholars, as well as phonetic values. The ‘Deciphered?’ column indicates the decipherment status of the letter.

#	Letter	Variants	Deciphered?	Latin	IPA	Category
1	𑌵	𑌶	Yes	<i>a</i>	/a/	vowel
2	𑌷		Yes	<i>e</i>	/e/	vowel
3	𑌹	𑌺	Yes	<i>i</i>	/i/	vowel
4	𑌻	𑌼	Yes	<i>o</i>	/o/	vowel
5	𑌽		Yes	<i>u</i>	/u/	vowel
6	𑌿	𑍀	Yes	<i>w</i>	/w/	semi-vowel
7	𑍂	𑍃	Yes	<i>y</i>	/j/	semi-vowel
8	𑍅		Yes	<i>p</i>	/p/	consonant
9	𑍇		No	<i>φ (ç ?)</i>	/p <sup>h</sup> / (/ts/ ?)	consonant
10	𑍉	𑍊	Yes	<i>m</i>	/m/	consonant
11	𑍋		Yes	<i>t</i>	/t/	consonant
12	𑍍	𑍎	Yes	<i>d</i>	/d/	consonant
13	𑍏	𑍐	Yes	<i>θ</i>	/t <sup>h</sup> /	consonant
14	𑍒		Yes	<i>z</i>	/z/ (or /s/)	consonant
15	𑍔	𑍕	Yes	<i>s</i>	/s/	consonant
16	𑍗	𑍘	Yes	<i>n</i>	/n/	consonant
17	𑍚	𑍛, 𑍜	Yes	<i>l</i>	/l/	consonant
18	𑍞		Yes	<i>t<sub>2</sub></i>	/ts/	consonant
19	𑍠	𑍡	Yes	<i>g</i>	/g/	consonant
20	𑍤		No	<i>x</i>	/x/	consonant
21	𑍧	𑍨, 𑍩	Yes	<i>r</i>	/r/	consonant
22	𑍫		Yes	<i>a<sub>2</sub></i>		consonant
23	𑍯		No	<i>k (?)</i>		consonant
24	𑍳	𑍴, 𑍵	Yes	<i>b</i>	/b/	consonant
25	𑍷		Yes	<i>n<sub>2</sub></i>	/n/ ?	consonant
26	𑍻	𑍼	No	<i>z (?)</i>	/z/ (?)	consonant
27	𑍿	𑎀	No	<i>q (?)</i>		consonant
28	𑎄		No			ligature?
29	𑎈		No			ligature?

## 4.1 Additional attested letters

The following letters are documented in the scholarly literature as appearing on coinage, but are not included in the conventional scholarly repertoire for Sidetic. These letters appear to represent sound values that are analogous to letters in the conventional repertoire. Feedback from experts is needed for determining the status of these letters.

#	Letter	Deciphered?	Latin	IPA	Source
—	𐎡	Unknown	<i>d</i>	/d/	Woudhuizen 1985 (see fig. 11)
—	𐎢	Unknown	<i>k</i>	/k/	Woudhuizen 1985 (see fig. 11)
—	𐎣	Unknown	<i>b</i>	/b/	Bossert 1950 (see fig. 8) Brandenstein 1958 (see fig. 9) Woudhuizen 1985 (see fig. 11)

## 4.2 Proposed Encoding Model

Given that there are Sidetic letters whose values have not been fixed, there are two approaches to encoding the script in Unicode:

1. Include all attested, distinctive letters and assign them Unicode character names based upon serial numbers, which is the scholarly convention for identifying the letters. This approach would result in a proposed character repertoire of 29 letters.
2. Include only those letters for which scholars have proposed values with a high degree of certainty, and assign them Unicode character names that reference those values. This approach would result in a proposed repertoire of 22 letters.

Approach #1 is recommended, as it will provide scholars who are actively studying the script, to represent all Sidetic letters. Approach #2 would provide only those letters whose values have been fixed, but such an approach would deprive users of the ability to represent the entire known repertoire.

The number system used introduced by Nollé (2001: 629), as shown in fig. 12 is the conventional method for identifying Sidetic letters (see for example, figs. 17, 18). It is, therefore, practical to following this practice for names for Sidetic characters in Unicode. Such conventions are common for scripts with evolving decipherment statuses. For example, the scholarly names for Proto-Elamite letters are based upon the number system introduced by Meriggi, ie. M1, M387, etc. In that nomenclature, the M is an abbreviation of ‘Meriggi’. Accordingly, Sidetic letters may be referred to as N1, N2, etc., where N is an abbreviation of ‘Nollé’. A comparison of possible Sidetic character names based on serial numbers and phonetic values is shown below:

#	Letter	Named by serial number	Named by phonetic value
1	𐎠	SIDETIC LETTER N1	SIDETIC LETTER A
2	𐎡	SIDETIC LETTER N2	SIDETIC LETTER E
3	𐎢	SIDETIC LETTER N3	SIDETIC LETTER I
4	𐎣	SIDETIC LETTER N4	SIDETIC LETTER O

#	Letter	Named by serial number	Named by phonetic value
5	Υ	SIDETIC LETTER N5	SIDETIC LETTER U
6	Ϸ	SIDETIC LETTER N6	SIDETIC LETTER W
7	ϸ	SIDETIC LETTER N7	SIDETIC LETTER Y
8	Ϲ	SIDETIC LETTER N8	SIDETIC LETTER P
9	Ϻ	SIDETIC LETTER N9	—
10	ϻ	SIDETIC LETTER N10	SIDETIC LETTER M
11	ϼ	SIDETIC LETTER N11	SIDETIC LETTER T
12	Ͻ	SIDETIC LETTER N12	SIDETIC LETTER D
13	Ͼ	SIDETIC LETTER N13	SIDETIC LETTER TH
14	Ͽ	SIDETIC LETTER N14	SIDETIC LETTER Z
15	Ͽ	SIDETIC LETTER N15	SIDETIC LETTER S
16	Ͽ	SIDETIC LETTER N16	SIDETIC LETTER N
17	Ͽ	SIDETIC LETTER N17	SIDETIC LETTER L
18	Ͽ	SIDETIC LETTER N18	SIDETIC LETTER TS
19	Ͽ	SIDETIC LETTER N19	SIDETIC LETTER G
20	Ͽ	SIDETIC LETTER N20	SIDETIC LETTER X
21	Ͽ	SIDETIC LETTER N21	SIDETIC LETTER R
22	Ͽ	SIDETIC LETTER N22	—
23	Ͽ	SIDETIC LETTER N23	—
24	Ͽ	SIDETIC LETTER N24	SIDETIC LETTER B
25	Ͽ	SIDETIC LETTER N25	—
26	Ͽ	SIDETIC LETTER N26	—
27	Ͽ	SIDETIC LETTER N27	—
28	Ͽ	SIDETIC LETTER N28	—
29	Ͽ	SIDETIC LETTER N29	—

Certainly, while a reference to the actual value of a letter would be ideal in a Unicode name, this is not possible due to the uncertain values for several letters. On the other hand, a naming convention based on serial numbers provides for distinctive identifiers for all letters in the scholarly repertoire.

The representative glyphs for Sidetic letters are based upon forms attested in inscriptions. Variant forms are unified with the normative letter. However, some of the forms listed as glyphic variants may be candidates for separate encoding if it occurs concurrently with the representative form, eg. *z* represented using both Ͽ and Ͽ in S9 (see fig. 6). A glyphic variant may also be encoded separately if it differs substantially in structure from the representative form, eg. Ͽ<sub>h</sub> for Ͽ *d* in S2 (see fig. 2).

### 4.3 Other script details

- *Punctuation* Script-specific punctuation is not attested. Usage of spaces for separating words and other text segments is inconsistent.
- *Line-breaking* The sources do not contain evidence showing rules for breaking words at the end of line. Words are typically split after a letter when it occurs at a ‘margin’ or some defined position on the surface, and continued on the next line with the subsequent letter in the word. There are no indications of hyphens or other continuation marks. In digital layouts, line-breaks should occur after words.
- *Digits* Digits are not attested in Sidetic records.

## 7 Acknowledgments

I would like to express my gratitude to following individuals:

- Michaela Zinko (Associate Professor, Institut für Antike, Universität Graz, Austria), for extensive feedback about the character repertoire; details about additional variant forms; and status regarding the decipherment of the Sidetic script. This revised proposal would not have been possible without her feedback.
- Alfredo Rizzo, for literature about the Sidetic script, as well as feedback on the character repertoire
- Lars Rutten (Leu Numismatik AG, Winterthur, Switzerland), for providing me with an image of a Sidetic coin, and discussions on Sidetic coinage
- Craig Melchert (Professor Emeritus, Department of Linguistics and Interdepartmental Program in Indo-European Studies, UCLA), for discussions about Sidetic and for providing scholarly articles

The glyphs used in this proposal are derived from the ‘Aegean’ font developed by George Douros, with modifications and new glyphs created by the proposal author.

The project to encode Sidetic has been made possible in part by funding from the Adopt-A-Character program of the Unicode Consortium and the effort is supervised by Deborah Anderson and Andrew Glass.

It was also made possible in part by a grant from the U.S. National Endowment for the Humanities, which funded the Universal Scripts Project PR-268710-20 (part of the Script Encoding Initiative at UC Berkeley). Any views, findings, conclusions or recommendations expressed in this publication do not necessarily reflect those of the National Endowment of the Humanities.
