

Proposal to Encode Latin characters for Initial Teaching Alphabet

in ISO/IEC 10646 and The Unicode Standard

Nikita Manulov, pacancuvak15@gmail.com

2022-11-12

1.Introduction

English Initial Teaching Alphabet, short. ITA or I.T.A. is an initial learning alphabet that was invented by James Pitman, grandson of the inventor of Pitman cursive. It was first used in a number of British schools in 1961 and soon spread to the USA and Australia. It is designed to make it easier for English-speaking children to learn to read English. The idea is that children first learn to read using ITA, and then become familiar with standard English spelling at the age of seven. Opinions on the effectiveness of I.T.A. differ, and it has never become the main learning tool.

Figure 9. Example from I.t.a by O'Halloran, George

Figure 6 Showing the 44 characters of the Initial Teaching Alphabet (i.t.a.), taken from the Special Report on i.t.a. in the 1965 Britannica Book of the Year.

Figure 10. Example from I.t.a by O'Halloran, George showing LATIN SMALL LETTER STRETCHED CH, LATIN SMALL LETTER ESH H, LATIN SMALL LETTER TH WITH LEFT TAIL, LATIN SMALL LETTER TH WITH LONG TAIL

In spite of the claim that the values of the letters in i.t.a. are completely regular, I found it necessary to refer to a spelling list even after four terms. Is it not significant that the publication of a spelling list was necessary?

Downing's evidence to support the view that spelling irregularity is a cause of difficulty in learning to read is drawn from the successes of the earlier experiments with simplified alphabets, described at the beginning of this chapter. However, one recent investigation into the relationship between the unsystematic spelling of English and reading difficulty is that of Lee (1966), who drew up lists of regular and irregular words for the 275 children in his sample to read. Commenting on his results he says:

As far as the words [*in his lists*] are concerned there is no correlation between the irregularity of their spelling and the extent to which they are successfully or unsuccessfully read.

Lee concluded from his experiments that irregular spellings were by no means a major cause of reading difficulty for the children who took part in them.

Downing (1962), however, questions the validity of Lee's conclusions, pointing out (and rightly so) that, as the children in the experiment were between six and ten and could read, the effects of the irregularity of the spelling may have been obscured by the frequency of occurrence of the words in the children's reading – a variable Lee had not taken into consideration. The evidence on this question provided by the main i.t.a. experiment will be discussed in a later chapter.

On the other hand, even though there may be ambiguities in the English spelling, it must be realised that there is quite a strong relationship between the spoken and written codes of our language. Hanna and Moore (1953) analysed a 3,000 basic word vocabulary list, and found that approximately four out of five of the phonemes contained in the words were spelled consistently with the same one or two letters. They also found that ten of the con-

sonant phonemes were spelled regularly 90% of the times they occur. They write:

We must not be so discouraged with the 20% irregularity that we fail to profit from the 80% regularity.

It has been pointed out many times that Pitman's aim of providing a systematic medium for early reading without permanent spelling reform did mean a compromise. For example, Diack (1965) writes:

The Pitman alphabet is an easy target for those who advocate a simplification of English spelling on purely phonetic principles ... What i.t.a. does is to provide in print a guide to the sounds of the spoken word *without confusion*.

However, Stott's comments on the ambiguities of i.t.a. are helpful, as there is a common tendency to think and write in terms of a one sound – one symbol relationship when discussing i.t.a.

2. *i.t.a. is much less complex*

<p><i>l.o.</i> chat hash when then thin</p>	<p><i>i.t.a.</i> </p>
---	----------------------------------

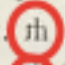

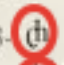

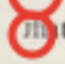

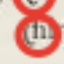

In i.t.a. the pupil is provided with an individual printed symbol for each of the phonemes which have no character of their own in our standard Roman alphabet. The child learns these new characters, for example, and , as single letters in their own right, each representing a particular phoneme. This process is felt to be much less complex than the conventional medium, where the child must learn that multiple character spellings such as 'ch' and 'sh' do not signal the sounds which initially they learned to associate with the individual letters 'c', 'h', 's' and 'h'.

Figure 11. Example from The i.t.a. reading experiment : three lectures on the research in infant schools with Sir James Pitman's initial teaching alphabet showing LATIN SMALL LETTER STRETCHED CH, LATIN SMALL LETTER TH WITH LEFT TAIL, LATIN SMALL LETTER TH WITH LONG TAIL

phonemes which conventionally have no letter of their own. Again it should be noted that these additional characters have been carefully designed to achieve a close resemblance between the new A.R. letter and the common conventional spelling of that sound. Table 7 shows three examples of the new characters and the use of each in a sample word. The success of the designers' efforts to provide I.T.A. spellings which closely resemble the final form of the same words in conventional orthography may be judged from these examples.

TABLE 7

Examples of new A.R. characters

A.R. letter:	1. 	2. 	3. 	4. æ
I.T.A. spelling	 t	 n	 n	toæ
Conventional Spelling	that	thin	chin	toe

The addition of these new A.R. characters to the 24 lower-case letters of our standard alphabet which are retained in I.T.A., brings the total number of letters to be learned to only 43 which is, in fact, less than the total which usually has to be taken into account by the beginner (e.g. A, a, B, b, D, d, E, e, F, f, G, g, etc.)

This augmentation of our alphabet, related as it is to our conventional habits of printing English, is the most important of all Pitman's innovations. The additional letters with their close resemblance to the traditional spellings of these phonemes are designed to permit the removal of almost all of those difficulties of the phonic learner which are caused by our standard alphabet and spelling. The new characters bring four benefits to the phonic teacher using I.T.A. for beginning reading:

(i) Each symbol effectively stands for its own and only its own phoneme. For example, the letter o represents the one phoneme common to:

on, off, lot, mop

It is not used ambiguously to represent a variety of different phonemes as it is in the conventional spelling of:

on, one, go, do, women, etc.

These five different phonemes are clearly indicated by their different spellings in I.T.A.

on, wun, gœ, dø, wimen

**ISO/IEC JTC 1/SC 2/WG 2
PROPOSAL SUMMARY FORM TO ACCOMPANY SUBMISSIONS
FOR ADDITIONS TO THE REPERTOIRE OF ISO/IEC 10646¹.**

Please fill all the sections A, B and C below.

Please read Principles and Procedures Document (P & P) from <http://www.dkuug.dk/JTC1/SC2/WG2/docs/principles.html> for guidelines and details before filling this form.

Please ensure you are using the latest Form from <http://www.dkuug.dk/JTC1/SC2/WG2/docs/summaryform.html>.

See also <http://www.dkuug.dk/JTC1/SC2/WG2/docs/roadmaps.html> for latest Roadmaps.

A. Administrative

1. Title: **Proposal to Encode Latin characters for Initial Teaching Alphabet**

2. Requester's name: *Nikita Manulov*

3. Requester type (Member body/Liaison/Individual contribution): *Individual contribution*

4. Submission date: *2022-11-14*

5. Requester's reference (if applicable):

6. Choose one of the following:

This is a complete proposal: *X*

(or) More information will be provided later:

B. Technical – General

1. Choose one of the following:

a. This proposal is for a new script (set of characters): *No*

Proposed name of script:

b. The proposal is for addition of character(s) to an existing block: *Yes*

Name of the existing block: *Latin Extended-G*

2. Number of characters in proposal: *16*

3. Proposed category (select one from below - see section 2.2 of P&P document):

A-Contemporary *X* B.1-Specialized (small collection) B.2-Specialized (large collection)

C-Major extinct D-Attested extinct E-Minor extinct

F-Archaic Hieroglyphic or Ideographic G-Obscure or questionable usage symbols

4. Is a repertoire including character names provided? *Yes*

a. If YES, are the names in accordance with the "character naming guidelines" in Annex L of P&P document?

b. Are the character shapes attached in a legible form suitable for review? *No*

5. Who will provide the appropriate computerized font (ordered preference: True Type, or PostScript format) for publishing the standard?

If available now, identify source(s) for the font (include address, e-mail, ftp-site, etc.) and indicate the tools used:

6. References:

a. Are references (to other character sets, dictionaries, descriptive texts etc.) provided? *Yes*

b. Are published examples of use (such as samples from newspapers, magazines, or other sources) of proposed characters attached? *Yes*

7. Special encoding issues:

Does the proposal address other aspects of character data processing (if applicable) such as input, presentation, sorting, searching, indexing, transliteration etc. (if yes please enclose information)? *No*

8. Additional Information:

Submitters are invited to provide any additional information about Properties of the proposed Character(s) or Script that will assist in correct understanding of and correct linguistic processing of the proposed character(s) or script. Examples of such properties are: Casing information, Numeric information, Currency information, Display behaviour information such as line breaks, widths etc., Combining behaviour, Spacing behaviour, Directional behaviour, Default Collation behaviour, relevance in Mark Up contexts, Compatibility equivalence and other Unicode normalization related information. See the Unicode standard at <http://www.unicode.org> for such information on other scripts. Also see <http://www.unicode.org/Public/UNIDATA/UCD.html> and associated Unicode Technical Reports for information needed for consideration by the Unicode Technical Committee for inclusion in the Unicode Standard.

¹ Form number: N3152-F (Original 1994-10-14; Revised 1995-01, 1995-04, 1996-04, 1996-08, 1999-03, 2001-05, 2001-09, 2003-11, 2005-01, 2005-09, 2005-10, 2007-03, 2008-05)

C. Technical - Justification

1. Has this proposal for addition of character(s) been submitted before? If YES explain	<i>Yes</i> <i>L2/08-428</i>
2. Has contact been made to members of the user community (for example: National Body, user groups of the script or characters, other experts, etc.)? If YES, with whom? If YES, available relevant documents:	<i>Yes</i> <i>"Initial Teaching Alphabet Foundation"</i>
3. Information on the user community for the proposed characters (for example: size, demographics, information technology use, or publishing use) is included? Reference:	<i>See text</i>
4. The context of use for the proposed characters (type of use; common or rare) Reference:	<i>Rare</i>
5. Are the proposed characters in current use by the user community? If YES, where? Reference:	<i>Yes</i>
6. After giving due considerations to the principles in the P&P document must the proposed characters be entirely in the BMP? If YES, is a rationale provided? If YES, reference:	<i>Yes</i>
7. Should the proposed characters be kept together in a contiguous range (rather than being scattered)?	
8. Can any of the proposed characters be considered a presentation form of an existing character or character sequence? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>No</i>
9. Can any of the proposed characters be encoded using a composed character sequence of either existing characters or other proposed characters? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>No</i>
10. Can any of the proposed character(s) be considered to be similar (in appearance or function) to an existing character? If YES, is a rationale for its inclusion provided? If YES, reference:	<i>No</i>
11. Does the proposal include use of combining characters and/or use of composite sequences? If YES, is a rationale for such use provided? If YES, reference: Is a list of composite sequences and their corresponding glyph images (graphic symbols) provided? If YES, reference:	<i>No</i>
12. Does the proposal contain characters with any special properties such as control function or similar semantics? If YES, describe in detail (include attachment if necessary)	<i>No</i>
13. Does the proposal contain any Ideographic compatibility character(s)? If YES, is the equivalent corresponding unified ideographic character(s) identified? If YES, reference:	<i>No</i>
