RE: Preliminary Classic Maya Syllabary and List of Classic Maya Signs

Date: December 8, 2022

Preliminary List of Classic Maya Signs and Syllabary

The preliminary list of Classic Maya signs and the syllabary include representative examples of signs (also termed “glyphs”) from hieroglyphic texts selected for inclusion in the Classic Maya Text Repository (CMTR) from the Western, Central, and Southern Maya regions (see list of sites in Table 1). The Classic Maya Text Repository, funded in part by a Level 2 Digital Humanities Advancement Award from the National Endowment for the Humanities (HAA-268887-20), led to the creation of a repository for Classic (ca. 250-900/1000 CE) and Late Postclassic (ca. 1250-1520 CE) Maya hieroglyphic texts in the form of line drawings, rubbings, and photographs. These are stored in Mayan-READ, an online open-access virtual research environment that enables visual and annotated collections of ancient texts to be effectively managed, accessed, disseminated, researched, and preserved over the long term. Building on prior work sponsored by the Script Encoding Initiative/Universal Scripts Project at UC Berkeley and the Unicode Consortium and funded in part by NEH awards, the project team worked with a subset of the texts in the repository to (1) prepare an illustrated dictionary of Late Classic period glyphs from the Western, Central, and Southern Maya regions, and (2) prepare drawings of approximately 60% of each unique glyph represented in those texts, as a preliminary step towards developing a font of Classic Maya glyphs that will be incorporated into a proposal to the Unicode Consortium to allow Maya hieroglyphs to be included in the Unicode Standard.

Table 1. Sites included in the CMTR.

Central region: Caracol, Naranjo, Tikal

Western region: Palenque, Piedras Negras, Tonina, Yaxchilan

Southern region: Copan, Quirigua

Background

Work funded in part by NEH grant PR-253360-17 (June 2016-present; Deborah Anderson, PI) resulted in the development of a glyphary (illustrated glyph dictionary) for the Maya screenfold codices through the collaborative efforts of Andrew Glass and Carlos Pallán (see list of Project Personnel below). Under the auspices of our Digital Humanities Advancement award, we extended the original Codical Glyphary to support a parallel database of Classic Maya glyphs.

The Maya script is based on a logosyllabic system. Signs can have a purely syllabic (consonant-vowel, or CV) value; a logographic value, consisting of a CVC(VC) form; or both. Some logographs have a calendrical function, such as naming a day (one of twenty) in the 260-day *tzolk'in* calendar, or a “month” in the 365-day *ha:b'* calendar.

The two classes of signs are included under separate headings in the sign list—Syllabograms and Logograms. Note that the same sign, designated by a three-letter code and a “v” (variant) number (assigned based on Macri and Looper 2003), may occur in both lists, if the sign in question has both a syllabic and logographic reading. An example includes ZC1 (v1 and v2), which has the CV value **ku** and the logographic values TU:N and SIHO:M.

Conventions used in the tables that follow include:

- CV signs are transcribed in lowercase, and logograms in uppercase.
- Glottal stops are represented by an apostrophe. They are not included for syllables that begin with a glottal stop followed by a vowel (i.e., the syllable 'a is written as **a**, 'e as **e**, etc.).
- Long vowels (e.g., VV or Vh) are written as V: in the column indicating Phonetic Value. They are written as VV or Vh in the Gloss column (except for *ha:b'*, which retains the V: spelling).

The Classic glyph set is based on the coding conventions developed by Macri and Looper (2003; see also Looper et al. 2021, Macri and Vail 2009) but is also extensively cross-referenced to other cataloging schemes such as that developed by Eric Thompson (1962) and the more recent sign list of Alexandre Tokovinine (2017), as well as “photocat” numbers generated for the NcodeX Project directed by Carlos Pallán.

Tables

The syllabary is arranged in a grid format, with the vowels represented across the tops of the columns, and the consonants down the first column, marked “Onset.” As noted above, the glottal stop is not represented but corresponds to the second row of the table.

For the sign list, the column headings include:

IDX (index): the sort order based on alphabetizing according to phonetic value.

Phonetic value: the syllabic or logographic rendering of the sign (see above for further details)

Code: based on the system developed by Martha Macri, Matthew Looper, and colleagues (Macri and Looper 2003; Macri and Vail 2009; Looper et al. 2021)

Sign: representative signs were chosen from the texts prepared for the CMTR and drawn by team members Maximillian Mermell and Céline Tamignaux. Only a subset of all of the signs were drawn, based on the funding available. Additional funding will be required for a new phase to include those remaining.

Gloss: this field includes the English translation of the logographic value, as well as information pertaining to calendrical and/or grammatical function.

Project Team

Research for the Classic Maya sign list and syllabary was undertaken by Holly Maxwell, Céline Tamignaux, and Gabrielle Vail, based on a dataset initially developed by Carlos Pallán. The Classic “glyphary” was created by repurposing the Codical Glyphary READ plugin developed by Andrew Glass with data and drawings contributed by Carlos Pallán.

Gabrielle Vail served as the Principal Investigator for the Classic Maya Text Repository project. Contributors during the grant period (February 2019 to July 2021) included:

- Project Collaborator/Research Associate: Carlos Pallán (University of Bonn)
- Technical Consultants: Andrew Glass (Microsoft); Stephen White (Università Ca’ Foscari di Venezia); William Giltinan (independent consultant)
- Research Assistants: Holly Maxwell (SUNY Albany); Céline Tamignaux (University of Bonn)
- Research Associate (Hazen fellowship): Ashley Burke (independent consultant)
- Advisors: Debbie Anderson (UC Berkeley); Christine Hernández (Tulane University); Lisa Moore (Unicode)
- Graphics Artists: Maximillian Mermell (independent consultant)

Continued project work (September 2021 to present) has been undertaken by Andrew Glass, Holly Maxwell, Maximillian Mermell, Gabrielle Vail, and Stephen White. Advisors have included Debbie Anderson, Christine Hernández, and William Giltinan.

Project Funding

The project was funded in part by a Digital Humanities Advancement Grant (HAA-268887-20) from the National Endowment for the Humanities; two Adopt-a-Character grants from the Unicode Consortium (AAC-Mayan-2019 and -21), and a Dan C. Hazen Fellowship from SALALM (Seminar for the Acquisition of Latin American Library Materials). SEI work on Maya hieroglyphs has received support from NEH grant PR-253360-17 and PR-268710-20 through the Universal Scripts Project at UC Berkeley. Any views, findings, conclusions, or recommendations expressed in this report do not necessarily represent those of the National Endowment for the Humanities, the Unicode Consortium, SALALM, or any of the partner institutions.
